

Faculty of Pharmacy

observes

World Antimicrobial Awareness Week 2022

Antimicrobial Resistance (AMR) is a complex problem affecting human, animal, plant and environmental health. Addressing AMR requires a holistic and multispectral approach. The WHO promotes the disseminating of related knowledge and ways to prevent and minimize resistance. The WHO observes a week every year from November 18-24 in order to increase awareness of global antimicrobial resistance and to encourage best practices among the general public, health workers and policy makers to avoid the further emergence and spread of drug-resistant infections.

One of the key objectives of the plan is to improve awareness and understanding of antimicrobial resistance through effective communication, education and training.

The Faculty of Pharmacy, shall observe "World Antimicrobial Awareness Week, 2022" from November 18, 2021 through November 24, 2022.
