Certificate of Registration for a UK Design

Design number: 6403643

Grant date: 18 November 2024

Registration date: 11 November 2024

This is to certify that,

in pursuance of and subject to the provision of Registered Designs Act 1949, the design of which a representation or specimen is attached, had been registered as of the date of registration shown above in the name of

Dr. Amardeep Gupta, Dr Bably Dolly, Dr. Sunil Babu Melingi, Mr. Meriga Kiran

Kumar, Dr. Anandhan Mahendran, Prof. Ananda Shankar Hati, Dr Muthukumar

Krishnan

in respect of the application of such design to:

Sensor Based Robotic Display For Interactive Marketing

International Design Classification:

Version: 14-2023

Class: 15 MACHINES, NOT ELSEWHERE SPECIFIED

Subclass: 99 MISCELLANEOUS

डिजाइन के पंजीकरण का प्रमाण पत्र
Certificate of Registration of Design

डिजाइन सं. / Design No. 431810-001

तारीख / Date 26/09/2024

पारस्परिकता तारीख / Reciprocity Date*

देश / Country

प्रमाणित किया जाता है कि संलग्न प्रति में वर्णित डिजाइन जो **RADIO FREQUENCY POWER AMPLIFIER DEVICE** से संबंधित है, का पंजीकरण, श्रेणी 14-03 में 1.Mr S Mahalingam 2. Dr K Dhivya 3.Dr Shrish Bajpai 4.Dr Divya Sharma 5.Dr Prashant Sunagar 6.Mr R Venkatesh के नाम में उपर्युक्त संख्या और तारीख में कर लिया गया है।

Certified that the design of which a copy is annexed hereto has been registered as of the number and date given above in class 14-03 in respect of the application of such design to **RADIO FREQUENCY POWER AMPLIFIER DEVICE** in the name of 1.Mr S Mahalingam 2. Dr K Dhivya 3.Dr Shrish Bajpai 4.Dr Divya Sharma 5.Dr Prashant Sunagar 6.Mr R Venkatesh.

डिजाइन अधिनियम, 2000 तथा डिजाइन नियम, 2001 के अध्याधीन प्रावधानों के अनुसरण में।
In pursuance of and subject to the provisions of the Designs Act, 2000 and the Designs Rules, 2001.

Head

Australian Government

IP Australia

CERTIFICATE OF GRANT INNOVATION PATENT

Patent number: 2021103141

The Commissioner of Patents has granted the above patent on 11 May 2022, and certifies that the below particulars have been registered in the Register of Patents.

Name and address of patentee(s):

Vipin Khatri of Research Scholar, Department of Computer Application, Integral University, Dasauli Bae-ha Kursi Road, Lucknow, Uttar Pradesh 226026 India

Sandeep Kumar Nayak of Associate Professor, Department of Computer Application, Integral University, Dasauli Bae-ha Kursi Road, Lucknow, Uttar Pradesh 226026 India

Deepak Kumar Singh of Adjunct Professor, Jaipuria Institute of Management, Vineet Khand, Gomti Nagar Lucknow, Uttar Pradesh 226010 India

Title of invention:

FRAUD DETECTION-DECISION SUPPORT SYSTEM FOR PLASTIC CARD BASED TRANSACTION SYSTEM THROUGH SECURING THE USER'S END AND METHOD THEREOF

Name of inventor(s):

Khatri, Vipin; Nayak, Sandeep Kumar and Singh, Deepak Kumar

Term of Patent:

Eight years from 6 June 2021

NOTE: This Innovation Patent cannot be enforced unless and until it has been examined by the Commissioner of Patents and a Certificate of Examination has been issued. See sections 120(1A) and 129A of the Patents Act 1990, set out on the reverse of this document.

Dated this 11th day of May 2022

Commissioner of Patents

PATENTS ACT 1990

The Australian Patents Register is the official record and should be referred to for the full details pertaining to this IP Right

This data, for application number 2021103141, is current as of 2022-11-15 21:00 AEST

(57) Abstract :
ABSTRACT The present invention pertains seed germination system and, more specifically, to a solar-based hydroponics crop germination system comprising a hydroponic structure made up of aluminum sheets, a solar panel is installed at the top of the structure to absorb sunlight; a battery connected to the solar panel to store energy received from sun, a solar charger controller to shows the status of the battery, a blue LED light act as a chlorophyll production for crops, a hydroponic net cups to grow plants.

(57) Abstract :
ABSTRACT The present invention discloses a domestic portable hydroponic system to grow plants with full portability allowing omnidirectional relocation, facilitating with easy assembly of variable height adjustment platform and minimal space utility. The system comprises a deep flow type hydroponic setup supported by a frame with four caster wheels, connecting rods, plant holding tubular platform, nutrition tank for supplying nutrient mixture to the plants.

(57) Abstract :

The present invention relates to the development of genetically engineered microorganisms designed for the efficient biodegradation of plastic waste. This innovative approach addresses the growing environmental challenge posed by plastic pollution by utilizing microbial strains, such as Escherichia coli and Pseudomonas putida, genetically modified to express plastic-degrading enzymes like PETase and MHEase. These enzymes accelerate the breakdown of synthetic plastics, including polyethylene (PE) and polyethylene terephthalate (PET), into environmentally benign byproducts such as carbon dioxide and water. The microorganisms are further optimized through directed evolution and metabolic engineering to enhance enzyme activity, stability, and byproduct utilization. This technology offers a scalable, eco-friendly solution for plastic waste management, applicable in industrial waste treatment plants, landfills, and polluted natural environments. The invention promises significant advancements in reducing plastic pollution and promoting sustainable environmental practices.

Die folgenden Angaben sind den vom Anmelder eingereichten Unterlagen entnommen.

(54) Bezeichnung: **Fortschrittliches UV-A- und UV-B-basiertes Überwachungssystem für ein optimales Hautgesundheitsmanagement**

(57) Hauptanspruch: Ein auf UV-A und UV-B basierendes Überwachungssystem (100) für ein optimales Hautgesundheitsmanagement, umfassend:
a. Eine Sensoranordnung (1), bestehend aus
b. Mindestens ein erster Sensor (11), der die Intensität der ultravioletten A-Strahlung (UV-A) erfassen kann.
c. Mindestens ein zweiter Sensor (12), der die Intensität der ultravioletten B-Strahlung (UV-B) erfassen kann.
d. einen Hauttemperatursensor (13).
e. einen Biosensor (14), der zur Messung relevanter Hautbiomarker (z. B. Feuchtigkeit, Melanin Gehalt) geeignet ist.
f. einen Lichtdiffusor (15), der so konfiguriert ist, dass er die einfallende UV-Strahlung auf den ersten und den zweiten Sensor verteilt. eine Verarbeitungseinheit (2), die so konfiguriert ist, dass sie Daten von der Sensoranordnung (1) empfängt, die so angepasst ist, dass sie einen UV-Index auf der Grundlage der erfassten UV-A- und UV-B-Strahlungsintensitäten berechnet, wobei die Verarbeitungseinheit (2) ferner so angepasst ist, dass sie ein potenzielles Hautschadensrisiko auf der Grundlage des UV-Index und benutzerspezifischer Faktoren (z. B. Hauttyp, Sonnenexpositionsgeschichte) bewertet, und die optional so konfiguriert ist, dass sie die Haut analysiert Biomarkerdaten, um eine umfassendere Bewertung der Hautgesundheit zu ermöglichen, das
eine Verarbeitungseinheit (2) nutzen Algorithmen des maschinellen Lernens, um Empfehlungen auf der Grundlage von Benutzerdaten und historischen Nutzungsmustern zu personalisieren.
eine Benutzerschnittstelleneinheit (3) ist so ausgelegt, dass sie den UV-Index, das potenzielle Hautschadensrisiko und personalisierte Empfehlungen für den Sonnenschutz anzeigt (z. B. empfohlener Lichtschutzfaktor, Dauer der Sonnenexposition), und die Benutzerschnittstelleneinheit (3) ist so konfiguriert, dass sie Hautbiomarkerdaten und personalisierte Ratschläge für eine optimale Hautgesundheit anzeigt (z. B. Feuchtigkeitstipps, gezielte Hautpflegeroutinen);

eine mobile Anwendung (4), die über ein Smartphone oder ein anderes mobiles Gerät zugänglich ist;
ein tragbares Gerät (5) (z. B. eine Smartwatch), das in die Sensoreinheit (1) integriert ist;
eine Anzeigeeinheit (6) zur Darstellung von UV-Strahlungswerten und Hautgesundheitsinformationen für den Benutzer;
ein Kommunikationsmodul (7) zur Übertragung von Daten an einen entfernten Server; und
eine Stromversorgungseinheit (8) mit wiederaufladbarer Batterie und Solarladefähigkeit.

(57) Abstract :

This invention introduces a secure, blockchain-based framework for electronic health records (EHR) management, addressing critical privacy, security, and accessibility needs in healthcare. Traditional centralized systems are vulnerable to data breaches, single points of failure, and fragmented records, limiting secure, unified data storage. This proposed framework overcomes these issues by combining blockchain technology with Genetic Algorithms (GAs) to enhance security and performance. Key components include the InterPlanetary File System (IPFS) for decentralized storage and Elliptic Curve Cryptography (ECC) for strong encryption. The Genetic Algorithm optimizes blockchain parameters such as block size, block time, and node count through a custom fitness function, evaluating security, latency, and resource usage. Implemented on Hyperledger Fabric and validated through Finite State Machine modeling, the system provides high data security, efficient retrieval, and resilience against unauthorized access. With patient-centric access control via smart contracts, this framework offers an innovative solution for secure, scalable healthcare data management.

(57) Abstract :

To capture and initialize a physiological signal from the human body, such as Electroencephalogram (EEG), Electrooculogram (EOG), Electrocardiogram (ECG), and Electromyogram (EMG) for subsequent digital signal processing, the circuit requires an analog signal processor. Operational Amplifier (Op-Amp) circuits are crucial in designing high-precision analog and mixed-signal blocks. Proper operational amplifier design affects the performance of a mixed signal integrated circuit system. A novel CMOS-based operational amplifier with improved gain and bandwidth is shown using a triple cascode operational transconductance amplifier. Op-amp circuits have replaced conventional solid-state analog control systems for biomedical signal processing and communication applications. The first stage involves an operational transconductance amplifier (OTA) with a single-ended output. The following stage involves a common source (CS) output stage with an active load. Furthermore, Simulation research shows a voltage gain of 35.78 dB, a bandwidth of 13.65 GHz, and an average power of 119.45 μ W at the 45 nm technology node.

(57) Abstract :
ANALYSIS AND STUDY OF HYDROTHERMAL SYNTHESIS OF BISMUTH FERRITE HOLLOW SPHERES WITH ENHANCED VISIBLE LIGHT PHOTOCATALYTIC ACTIVITY USING DEEP LEARNING APPROACHES The developed method provides techniques and tools for the production of supercritical hydrothermal of cyclic nanoparticles. Use metal salt solution as raw material, produce acid in the reaction field after nanoparticle synthesis, and supply alkaline water solution to the reaction field to control the pH of the reaction field and control the size of particles of the synthesized fine particles are two steps of the supercritical hydrothermal synthesis method. Supercritical water oxidation is used to release heat, and cold materials are used in supercritical water thermal fusion and preheated supercritical water oxidation reactions. This innovation offers a revolutionary technique to achieve hydrothermal synthesis of carbon quantum dots without the use of low-temperature plasma or other high-end devices. MXene nanosheets, bismuth-based photocatalyst nanoparticles and porous support layer are used to create composites of MXene/bismuth-based photocatalytic nanoparticles. This material advances the field of film preparation engineering and in particular offers MXene and bismuth-based photocatalytic synthetic films. FIG.1

(57) Abstract :

The Dual-Chamber Water Bottle with Separate Hot (13) and Cold (15) Compartments is a cutting-edge beverage container designed to keep hot and cold liquids at optimal temperatures while preventing flavour transfer. This innovative solution caters to outdoor, travellers, enthusiasts and busy individuals seeking versatile hydration options. By utilizing advanced double-walled insulation (14), the bottle maintains distinct temperature zones, ensuring hot drinks remain hot and cold beverages stay chilled for extended periods. Its robust, leak-proof design incorporates high-quality, enhancing safety and durability. The bottle features user-friendly elements, such as detachable parts (10, 11) for easy cleaning, ergonomic handles, and a compact design suitable for portability. Additionally, the dual-chamber structure promotes sustainability by reducing the need for multiple bottles, thus appealing to environmentally conscious consumers. This invention enhances the drinking experience, merging functionality, convenience, and eco-friendliness into a single, stylish product.

(57) Abstract :

This innovation investigates the impact of a spherical object on fluid flow within a nozzle system, focusing on the transition zone between a larger diameter pipe and a reduced diameter nozzle. This innovative research is pivotal for industries such as automotive, chemical processing, and aerospace, where precise fluid flow management is essential for performance and efficiency. The presence of a sphere, with a diameter of 15 mm, in the transition zone introduces complexities such as altered flow patterns, turbulence, and pressure variations. These phenomena significantly influence flow characteristics by causing local flow separation, vortex formation, and changes in velocity profiles, thereby affecting nozzle performance and efficiency. The primary aim of this invention is to analyze how the sphere affects fluid dynamics within the nozzle's transitioning zone. Key objectives include predicting changes in flow velocity, pressure distribution around the sphere, and pressure distribution along the nozzle's inner surface. Results show that the average velocity of oxygen flow is 8.903 m/s due to the sphere, with maximum and minimum pressures of 101,374.28 pascals and 101,305.89 pascals at , respectively. Similarly, predicted maximum and minimum pressures on the inner surface of the nozzle section due to oxygen flow were 101,374.28 pascals and 101,305.89 pascals, respectively. Numerical simulations provide critical insights for refining nozzle designs, optimizing performance, and reducing development costs by allowing design engineer to modify the design prior to physical prototyping. This predicted analysis is essential for enhancing design efficiency and functionality.

(57) Abstract :

The present invention generally relates to a real-time system for processing a financial transaction between two parties based on machine learning comprises a graphical user interface to register a transferor and a transferee using personal credentials; a pair of biometric input devices to record the biometric data of the transferor and transferee, wherein the pair of biometric input devices comprising a transferor biometric input device and a transferee biometric input device; wherein the transferor biometric input device generates a piece of biometric transaction information from the transferor and the transferee during a money transfer process; and a central processor to verify the identities of the transferor and transferee to permit money transfer upon comparing the biometric transaction information with the recorded biometric data of the transferor and transferee.

(57) Abstract :

The system comprises a first central processor for generating a data acquisition application for generating CpG methylation data from a set of biological samples, the data acquisition application comprising a sequencing processor configured for performing CpG methylation by hybridizing at least one probe sequence to an extracted genomic DNA treated with a deaminating agent an input device receiving a first pair of CpG methylation datasets, a second pair of CpG methylation datasets, and a third pair of CpG methylation datasets; and a second central processor for generating a data analysis application for generating a cancer CpG methylation profile database, wherein the data analysis application comprising a data analysis processor for producing a pair-wise methylation difference dataset from the first, second, and third pair of datasets and evaluating the pair-wise methylation difference dataset with a control dataset to generate the cancer CpG methylation profile database for early detection of brain tumors.

(57) Abstract :

The present invention relates to a Deflection Latching Relay Switch (100) for switching and controlling of electrical devices, using magnetic coupling and deflection. Present invention comprises permanent magnets (101), (102), a leaf switch (103) and a coil (111). Permanent magnet (101) pivoted at coupling assembly (107) with predetermined distance and location, free to rotate their centroid along with diameter. Wherein said coil (111) placed near Permanent magnet (101). The leaf switch (103) is pivoted at deflection assembly (108) from the centre of their length and free to deflect 15 millimetre. The one end of leaf switch (103) has movable contact (104), and the other end sticks with a permanent magnet (102). Two fixed contacts (105), (114) placed at deflection assembly (108). When voltage applies for a moment to coil (111) the contact becomes closed, and when reverse the voltage for a moment the contact gets open.

(57) Abstract :

The present invention generally relates to a system for detecting depression using voice biomarkers comprises a training processor for training a natural language processing (NLP) model and an acoustic model on a set of features of a plurality of speech samples extracted by deploying an audio feature extractor; a healthcare application platform for conducting a live telehealth session between the subject and recording speech data from the subject; a central processor for generating an acoustic report and an NLP report upon processing the speech data with the acoustic model and the NLP model thereby fusing the acoustic report and the NLP report to generate a metric that is indicative of whether the subject has or is likely to have the behavioral or mental health condition; and a display device for displaying the metric on a graphical user interface, wherein the metric is displayed during the live telehealth session.

(57) Abstract :

In this investigation, a non-Markovian batch arrival queue with a single-server and multi-phases vacation has been studied. The multi-phase vacation means that after the first phase of regular vacation, the server may take optional K-vacations. We construct Chapman Kolmogorov equations with the help of the supplementary variable technique. For analysis purpose, generating function method is employed. Various performance characteristics and special cases are established. The numerical results and sensitivity analysis have been facilitated to validate the analytical results.

(57) Abstract :

An inverter topology has been designed by modifying the conventional H-bridge to reduce the common mode current (CMC) occurring in a grid connected PV system. The common mode current, if not suppressed, not only causes maloperation of protective system thereby posing safety hazards but also causes electromagnetic interference, slow deterioration of PV panel and introduces harmonics into the supply. The method adopted in this topology is the decoupling of ac and dc sides along with clamping of one of the bridge leg voltages to mid-point of the dc link voltage. Both of the methods are activated during the freewheeling/zero state of the H-bridge inverter through two additional switches and a diode. The variation of common mode voltage is thus checked leading to reduction in common mode current while other performance parameters like efficiency and total harmonic distortion (THD) are not much affected.

(57) Abstract :

Various 7-level switched-capacitor (SC) based converters are reported in literature which furnish the voltage gain of 1.5. However, these topologies require switches having high value of voltage stresses and switch count is more. Further, the charging and discharging action of the switched capacitors, lead to production of spikes having large magnitude in source current and charging currents supplied to switched-capacitors. Due to this limitation, the SC based Multilevel Inverter (SC-MLI) cannot be used for high power applications. To fill these gaps, an Active-Neutral-Point-Clamped (ANPC) based SC-MLI converter topology is proposed in this research which require switches having less value of voltage stresses and the switch count of the proposed converter is less. Further, to reduce the magnitude of spikes in source and charging currents of switched-capacitors capacitors, a soft switching circuit is included in the proposed converter. The soft charging circuit includes an inductor and a diode in the charging path of the proposed converter which ensures soft charging of the switched-capacitors. The proposed converter is able to significantly suppress the spikes appearing in the source current by including a small value of inductance connected in the soft charging circuit. The proposed topology requires single dc source, 2switched-capacitors, 9 switches to generate 7-level and does not require auxiliary diode. The absence of auxiliary diode leads to further reduction in losses. The proposed topology is able to maintain self-balancing of the capacitor voltage even at low value of modulation index. To highlight the various key features of the proposed 7-level topology, its comparison with state-of-the-art converter topologies is carried out. To validate the efficacy of the proposed 7-level SC-MLI, experimental results are included which are captured using a laboratory prototype for different values of soft charging inductor.

(57) Abstract :

Multi-level inverter (MLIs) designs with Switched-Capacitor (SC) are on the rise due to their applicability in sustainable energy systems and high voltage applications. In this light, this research presents a compact Triple-Boost switched-capacitor multilevel inverter (TB-SCMLI) topology with fewer switches and the ability to self-balance. The suggested TB-SCMLI is able to provide seven levels of output voltage by balancing the voltage of two capacitors with the given control logic. The various SCMLIs are evaluated to determine the contribution of the suggested TB-SCMLI topology's merits and downsides. To validate the performance of the proposed TB-SCMLI, comprehensive experimental findings under various laboratory test settings have been given

(57) Abstract :

Recently ZnO has drawn attention of many researchers due to its high potential uses in the field of solar cell, UV-laser diode, LED, sensors, UV-blue light emitters, etc.. Spintronics, namely spin-based electronics, is a new generation of microelectronics, which utilizes both, charge and spin degrees of freedom of carriers. Half-metals and diluted magnetic semiconductors (DMSs) are expected to be promising materials for spin-based multifunctional devices. In half-metals, the conduction electrons at the Fermi energy (EF) are 100% spin polarized. Unique spin dependence optical and electrical properties are generated in ZnO doped with transition metal ions, are due to the strong exchange interactions between external s-p carriers of host and localized d electrons of dopant. Therefore an effort was made in developing thin films of codoped (Mn N) in ZnO to study the ferromagnetism at room temperature by experimental and theoretical study.

(57) Abstract :

The invention relates to an apparatus for detection of faults in solar panels. In one embodiment, the apparatus is capable of measuring micro crack or detecting a fault of a solar panels in an economic way before the panels become ineffective in the energy generation process. The invention detects the failure of a solar panels by using a monochromatic light source to measure the defects of the current detection method as compare to existing system used which are complicated and costly, and the system are huge and inconvenient to install on site and maintain.

(57) Abstract :

An analog signal processing device is needed in the circuit for the acquisition and initial processing of a physiological signal from the human body, such as an ECG/EKG, EEG, EMG, or EOG for further digital signal processing. An operational transconductance amplifier (OTA) has some advanced features over an operational amplifier (OP-AMP), including a wider bandwidth, a superior dynamic range, a greater output resistance, a wider bandwidth, and no additional phase issues. They can also be used for circuits with capacitive loads. An OTA is helpful for many electrical systems, including filters, oscillators, comparators, and analog-to-digital converters, thanks to its adaptability. A novel High Gain, Low Power Triple Cascode Operational Transconductance Amplifier (TCOTA) based on Carbon Nanotube Field Effect Transistor is shown. A CNTFET's channel is constructed by a parallel combination of SWCNTs, just like a conventional MOSFET. The benefits of CNTFETs include one-dimensional ballistic charge carrier movement, high mobility, high driving current, and minimal power consumption. A CNTFET's channel is constructed by a parallel combination of SWCNTs, just like a conventional MOSFET. The benefits of CNTFETs include one-dimensional ballistic charge carrier movement, high mobility, high driving current, and minimal power consumption. Furthermore, a simulation analysis demonstrates that the voltage gain and average power achieved are 70.69 dB and 9.2 μ W, respectively at 32 nm technology node.

(57) Abstract :

The present invention discloses a system (100) for water harvesting. The system (100) comprises a de slit chamber (105) connected with a concrete channel (145) and a plurality of PVC pipes (110 A), a harvesting unit (140) allow discharge of water and a reverse well point (130 A) (130 B) with a dispersal means (150 A) (150 B) wrapped with a geo-textile material preventing migration of soil materials. There is a kaval (160) at the top of reverse well point 130B. The dust struck on geotextile of 130 B falls down automatically.

(57) Abstract :
ABSTRACT: An advanced optimization model for coupling a power plant to PV-wind-electric vehicle is described herein. The proposed advanced optimization model is designed while taking into account the cost of the purchased energy is sold to the utility grid, while the power exchange is maintained between the power grid and the system's other components. The results show that the suggested system's LCOE and TSP are 0.038 \$/kWh and 0.19%, with a renewable proportion of 0.87, respectively. It is determined that careful management of renewable power generation and load demands can result in a cost-effective and reliable system. The working principle of proposed advanced optimization model is grounded in real-time data analysis and mathematical optimization to intelligently manage the coupling of a power plant with PV, wind, and EV systems. Its ability to adapt to changing conditions and optimize multiple objectives is a critical component in the transition to a sustainable and efficient energy use system. FIG. 1

(57) Abstract :

Instrumentation amplifiers (IA) are found in a wide range of circuit applications. Because of their capacity to minimize noise and have a high open loop gain, they are useful in circuit design. Instrumentation amplifier finds its application in biomedical systems to correctly monitor bio potential signals, such as Electroencephalogram (EEG), Electrooculogram (EOG), Electrocardiogram (ECG), and Electromyogram (EMG) which are low frequency signals and more susceptible to noise. Since instrumentation amplifiers are more resistant to noise removal owing to high CMRR, they are an appropriate choice. Operational amplifiers on the other hand, are an essential component in the current integrated systems. Because single-stage cascode or telescoping amplifiers are no longer suited for low-voltage applications due to the fast scaling down of transistor sizes and supply voltages in contemporary CMOS technologies, multistage amplifiers are becoming increasingly important. An instrumentation amplifier is useful because it can minimize undesired noise picked up by the circuit. The capacity of all IC pins to reject noise or undesirable signals is referred to as the common-mode rejection ratio (CMRR). Because of their high CMRR, instrumentation amplifiers are quite handy. Other features, such as high open loop gain, low power consumption make this IC extremely useful in circuit design. A novel High Gain, Ultra Low Power Instrumentation Amplifier is proposed using Carbon Nanotube Field Effect Transistor which reduces power line interferences and provide large CMRR and more gain. CNTFETs typically exhibit lower power consumption compared to traditional CMOS technology, making them suitable for low-power applications. CNTFETs can have lower sensitivity to temperature changes compared to conventional transistors, which can contribute to more stable amplifier performance. The simulation study shows that the voltage gain and average power achieved by CNTFET- based instrumentation amplifier is 81.08 dB and 1.24W, respectively.

(57) Abstract :

Urban parking, particularly in bustling Market Areas, has emerged as a persistent challenge in transportation systems over the past decades. The scarcity of parking spaces compels drivers to spend excessive time searching for available spots, resulting in congestion and energy wastage. This patent introduces an innovative optimal parking allocation model poised to revolutionize urban mobility and parking management. Tailored to densely populated urban areas with soaring parking demand, this model addresses critical concerns, including traffic congestion, environmental sustainability, economic efficiency, and user satisfaction, heralding a new era of parking space optimization. At its core, this model is a data-driven system seamlessly integrating real-time data collection and allocation algorithms. Continuous real-time parking data acquisition through cameras provides insights into space occupancy, user reservations, and traffic conditions. Utilizing historical data, the model effectively discerns parking space preferences. Central to this innovation is the allocation algorithm, purpose-built for real-time online interaction. It responds dynamically to incoming data and user interactions, ensuring efficient space allocation and a seamless user experience. Weather conditions, historical data, and collaboration with key stakeholders, including government bodies, urban planners, private parking operators, and technology providers, are also factored into the model. We propose model to allocate the optimal parking, considering real-time parking availability, fees, and user preferences. YOLO coding is employed to assess parking space availability using real-time video from parking lots. In summary, the optimal parking allocation model represents a pioneering solution to the multifaceted challenges of urban mobility and parking allocation. Its data-centric approach, user-friendly design, and adaptability position it as a transformative technology capable of enhancing efficiency, sustainability, and user satisfaction in urban environments. With the potential to alleviate congestion, enhance environmental sustainability, and elevate user experiences, this invention holds great promise for the cities of the future.

(57) Abstract :

The image captured by camera of Energy reading of a Smart Energy meter can be used to process that image to read the digits of Smart Energy meter. The creation of a reliable Smart Energy meter system that takes into account the change in electric meter reading is the main aim. The camera is installed at the front of Smart Energy meter which captures its image every 24 hours. The captured image segmentation is the technique that is used to cut off the area of an image that contains the Smart Energy meter reading. Character recognition is accomplished by the use of the process of character recognition. The data that was obtained is then compared every 3rd day. If it is seen that after 72 hours, the meter reading does not change or recedes back, then we can say the meter is a faulty one. The innovative system was constructed, and then its performance was evaluated with the use of images taken in the real world. The experiment reveals that the created system correctly recognises and identifies the error.

(57) Abstract :

The present invention pertains to the domain of microbial solutions for the removal of heavy metals, specifically targeting lead (Pb). It specifically focuses on the bacteria strain *Paenibacillus dendritiformis* (ACCSSION NO. OP835923) with high lead sequestration potential. Moreover, the efficiency of bioremediation is significantly enhanced through exposure to ultraviolet (UV) radiation. Lastly, a novel consortium of UV-treated *Stenotrophomonas maltophilia* and *Paenibacillus dendritiformis* is engineered to efficiently address lead contamination.

(57) Abstract :

ABSTRACT The present invention relates to a device (100) for predicting job performance based on emotional intelligence. The device (100) for predicting job performance comprises a questionnaire module, a data collection module, an advanced data analytics module, a demographic integration module, a predictive model module, a machine learning module, a decision support module and a customization module. The device (100) is configured to investigate the relationship among emotional intelligence, emotional labor, perceived organizational support, and job performance. The device (100) is configured to improve the sense of organizational support should also receive the organization's attention. The device (100) ensure the questionnaire is comprehensive and aligned with contemporary understanding and research on emotional intelligence. The device (100) configured to create a survey that comprehensively assesses key aspects of emotional intelligence, including self-awareness, self-regulation, motivation, empathy, and social skills, tailored to the specific requirements of different job roles.

(57) Abstract :

The present invention discloses a system for disease detection in plant leaves using deep convolutional neural network and method thereof. The present invention is comprised of, but not limited to, a processing unit communicatively coupled with a memory unit for collecting dataset containing various image set of plant leaves. Further, the dataset collected, can contain a plurality of images of plant leaves distributed proportionally among various classes—cedar rust, multiple diseases, and healthy leaves.

Abstract:

Security is the major Concern in IoT and WSN devices. Energy related apprehension increases due to limited battery power, especially when we are dealing with light weight devices in unattended environment. For providing basic security services, we always prefer symmetric encryption techniques over asymmetric techniques. But asymmetric approaches are the only way to get complete security services like one way authentication. Still we do not prefer to use asymmetric approaches because It consumes more energy in computation than symmetric approaches. By using offline processing or pre-processing concepts, we can pre-compute the part of the security techniques that depend on the sensed data/message before the deployment of the devices and compute rest of the security algorithms after deployment. This approach will conserve the and increase the lifetime of energy constraint devices. It also opens the option to implant asymmetric security approaches in light weighted devices.

Complete Specification

This invention relates to Energy saving approach in light weighted devices especially for IoT and Sensor devices.

BACKGROUND OF INVENTION

The information transferred may be a trivial conversation between light weighted nodes or resource constrained devices. The call for IoT and sensor networks security remains mostly unreciprocated, due to unattended environments. These networks are exposed to passive, active and routing attack by the adversary. The opponent can be aware of the conversation between the nodes and can forge the data.

Nodes should be resilient to these attacks.

We have identified following problems

1. Online processing of the security approaches consumes a lot of battery power for producing different security services like authentication, data integrity and confidentiality etc.
2. Like symmetric encryption, proper key management is a primary concern. Public key is not preferred due to its complex, power hungry and slow nature and not fit for use in low power environment.

3. A major applications of IoT & WSN like battle field scenario where authentication is a very

(57) Abstract :

The present invention discloses a machine learning-based hotspot prediction system in electronic design automation (EDA) applications. The system is comprised of, but not limited to, a hotspot defining module for identifying a criterion for a hotspot or a metric of the electronic circuit design; a processing unit for performing and placing the hotspot or metric prediction by using a deep learning data modelling; and a microcontroller configured for applying a correction candidate to an electronic circuit design, which is going to be under processing for IC chips embedding.

Abstract:

A method for authenticating a chain of custody utilizing blockchain technology, in which digital evidence or other digital content is acquired and then hashed to produce a fingerprint/signature, and then immediately or instantly submitting said hash fingerprint/signature to the blockchain using the blockchain network protocol, forming an immediate verifiable chain of custody without the involvement of a human or the involvement of a trusted third party, is described in detail.

Abstract:

IT Industry now a days uses Cloud technologies for various computational purpose such as platform, infrastructure and software on pay per use or on subscription basis. Glants such as IBM and Microsoft or even google have Introduced their cloud based services for different type of customers. Vast variety of service availability creates a co in consumer's mind, consumer is unable to decide which service provider is more reliable and effective. Till date there is no specific framework that helos the consumer to measure the Service prioritize and predict the suitable one according to the requirement of consumer. We need an effective mechanism to address of the consumer that i focuses on Service quality. Here inventors have claimed a framework and a mechanism that measures the quality and prioritize best cloud services are predicted on the b. QoS metrics. This Architecture will make a positive, transparent and quality environment for all the component of NIST based cloud framework (Cloud Consumer, Cloud Se Provider, Cloud Auditor, and Cloud broker) it will help to create a transparent and matured SLA (Service Level Agreement) between all the users We have also claimed the computing definition on the basic of service prediction and further prioritization.

(57) Abstract :

A firm's performance assessment is a topic that has been the subject of debate for many years among decision-makers such as managers, planners, economists, and members of the academic community. A company's policies and activities are evaluated in terms of their monetary outcomes, known as financial evaluation. Financial performance analysis is the examination and interpretation of financial statements so that it provides a comprehensive diagnostic of the profitability and financial soundness of a company. A broad indicator of a company's overall financial health over some time, this word may be used to compare comparable businesses within the same company or to compare companies or industries in aggregate. A company's production and productivity performance, profitability performance, liquidity performance, leverage performance, asset utilization performance, and growth performance are regularly evaluated by financial analysts. To identify the financial strengths and weaknesses of a company, the financial performance analysis must first establish accurate linkages between the items on the balance sheet and those on the profit and loss statement. It has been attempted in this study to analyze the profitability position of five prominent pharmaceutical businesses in India using the mean, standard deviation, coefficient of variation, multiple regression, and analysis of variance as measures of success.

(57) Abstract :

Historically, banks have played an important part in developing the country's economic position. The study's primary objective is to examine the financial health of a sample of public and private sector banks in India. According to the findings of this research, the financial performance of a chosen group of banks is examined. There are five characteristics of the CAMEL that are considered when ranking the banks on their performance: capital adequacy, asset quality, management efficiency, earnings ability, and liquidity. The investigation discovered that Kotak Mahindra had done better and was placed #1 among all banks, whereas Punjab National Bank was listed in the bottom half of the list. When comparing private sector banks to public sector banks, private sector banks have outperformed the latter. The top five spots are held by private sector banks, with Bank of Baroda being the only public sector bank in the top three rankings, with HDFC bank.

Abstract

Embodiments herein disclose a system for monitoring and identification of significant factors responsible for the slow adoption rate of blockchain technology based on soft computing techniques, said process comprising a module A for data collection from experts, a module B for converting linguistic term initial decision matrix into triangular number form, a module C for calculating ratio for each candidate/alternatives, a module D for calculating normalized aggregated ratings for each candidate/alternatives, a module E to implement the fuzzy ratio system method, a module F to implement the fuzzy reference point method, a module G to implement the fuzzy full multiplicative method, a module H to implement the information entropy weight - fuzzy comprehensive evaluation model, a module I for applying the theory of dominance and getting ranking by summarizing the ranks provided by constituent methods of FCEM-MULTIMOORA-FG, and a module J to select and explain the most significant factors responsible for the slow adoption rate of blockchain technology in a particular industry/organization, this module will also suggest possible measures to overcome the observed hurdles. The system model may be used by any industry/organization, for all verticals and horizontal, which wants to adopt blockchain technology.

Complete Specification

Claims: A system for monitoring and identification of significant factors responsible for the slow adoption rate of blockchain technology based on soft computing techniques, said process comprising, characterized in that:
a module A (S101a) for data collection from experts;
a module B (S102a) for converting linguistic term initial decision matrix into triangular fuzzy number form;
a module C (S102b) for calculating the ratio for each candidate/alternatives;
a module D (S102c) for calculating normalized aggregated ratings for each candidate/alternatives and the utopian objective reference point;
a module E (S103a) to implement the fuzzy ratio system method;
a module F (S103b) to implement the fuzzy reference point method;
a module G (S103c) to implement the fuzzy full multiplicative form method;
a module H (S103d) to implement the information entropy weight - fuzzy comprehensive evaluation model;
a module I (S104a) for applying the theory of dominance and getting the final ranking

Abstract:

The research work examines the potential of acid-treated biological waste of agriculture Oat (Avena Sativa) straw for the removal of the concentration of fluoride from groundwater following the chemical treatment using formaldehyde in 1:5 w/v ratio at 50°. The effects of working parameters like initial concentration of fluoride, the effect time, effect of pH and effect of the dose were inspected in the batch mode. Developed adsorbent (Oat straw) efficiency was matched with commercially available activated carbon (CAC) and obtained desirable for working at the conditions of neutral pH. Langmuir isotherm on adsorption data is improved applicability which reflects monolayer adsorption over the homogeneous surface of adsorbents. The pseudo-second-order kinetics data ($R^2 = 0.985$) exhibited improved experimental results. The simple synthesis technique, massive raw material availability made these adsorbents a promising and cost-effective technique for the defluoridation of groundwater.

Abstract

A high gain Direct current (DC)-DC converter that convert DC voltage into higher level DC voltage and comprise of two switches, two diodes, two inductor and two capacitors presented in the disclosure. The converter of the disclosure is capable of generating an output voltage of higher level at lower duty ratio $D < 0.5$ with reduced voltage across switch. A comprehensive comparison with the prior-art converters is performed to accentuate the advantages of the proposed converter.

Complete Specification

Description: 2. TECHNICAL FIELD OF INVENTION AND USE OF INVENTION

The field of the invention is related to power conversion from DC to DC power. This invention provides a very high output voltage gain at lower duty ratio as compared to conventional boost converter. An invented converter can be used in many power electronic applications like photo voltaic solar power generation, high voltage DC to DC transmission and it could also be used in electrical vehicle applications.

3. PRIOR ART AND PROBLEM TO BE SOLVED

The use of high-voltage-gain power converters was limited in the past to a few applications such as supplying power to plasma display panels and integrating batteries to uninterruptible power supply. Today, high-voltage-gain converters are being used in a wide variety of applications such as radar systems, dc distribution systems, renewable energy harvesting, and data centers. Integrating renewable energy into the electric power grid encourages the use of high-voltage gain converters to boost the voltage of the renewable energy sources to be suitable for integration to a 400 V dc distribution system. The use of dc distribution has several advantages over the use of an AC distribution system regarding the number of conversion units, price, and power quality. Therefore, using a high-voltage gain dc-dc converter, one can convert the unregulated low-output voltage of a solar panel to a regulated high-voltage output.

The design goals of power electronic converters vary from application to application, but the most common goals are maximum performance, high power density, or minimum cost. To achieve better performance of the converter, one needs to operate the converter at a suitable frequency, where the switching and core losses are low. The common design goals can be even more difficult to achieve in designing high voltage gain step-up converters because of the drawbacks of the existing topologies[1]-such as the high voltage stress across components and insufficient voltage gain. Topologies with high voltage stress across components require components with a high

Abstract

This invention is related to the discovery of a smart stick comprising novel design and sensors and components useful for the visually impaired person which is able to see obstacle from the three sides left, right, and front and alert by generating an audio output to the user according to the distance between the user and obstacle. With the help of this innovation, we can make visually impaired people's life easier by solving the most common problem related to their visibility. Sometimes, it is very difficult to walk in the dark for the visually impaired person, therefore, a suitable solution has been proposed to solve the visual difficulty by using the speaking smart stick. Ultrasonic sensors, Arduino microcontroller are used to control all the required components in this system. An audio signal is generated through this stick to alert the user when an object comes into the range of ultrasonic sensors, it senses the front, left, and right directions. Inside this stick, audio files are pre-loaded in Micro Micro-SD card and it can be accessed by the microcontroller. Three ultrasonic sensors are used to sense the obstacle and a microcontroller is used to calculate the distance through processing and play audio file according to the distance between a visually impaired person and obstacle.

Abstract

In this invention, we have used a novel methodology called the two-step process in which fabrication of the sample is done through sol-gel and a dip-coating method. The precursors for the doped samples are zinc nitrate hexahydrate as the host and manganese chloride hexahydrate as the dopant. On the samples, the fabrication of ZnO nanoarrays doped with different concentration of Mn was done to develop a TCO layer for solar cells applications.

Complete Specification

Undoped ZnO has certain limitation in its light absorption catalytic activity, which is due to the fast recombining speed of photo-generated electron-hole pairs. It is thus required to dope ZnO with suitable impurity, so as to get the required electrical, magnetic, structural and optical properties, doping with certain transition metal ions are called as Diluted Magnetic Semi-Conductors (DMS). Unique spin dependence optical and electrical properties are generated in such doped samples, due to the strong exchange interactions between external s-p carriers of host and localized d electrons of dopant. Doping with either of '3d' metal ions, like, Mn, Fe, Ni, Co, Cr, etc. lowers the particle size and hence increases the surface area. Out of all these dopants, Mn is preferred as the energy level of its 'd' electron can easily overlap with the valence band ZnO.

SUMMARY OF THE INVENTION:

In this invention, a TCO layer is proposed by the two-step process. The proposed disclosure is presented with the aim to improve the transmittance and conductivity of the top layer of the photovoltaic cell. It is achieved by using different doping concentration of Mn in host lattice of ZnO nanoarrays. The doping concentration of Mn is varied from 2%, 4%, 6% in ZnO. The advantage of the proposed process is that we obtain high conductivity of $70(\text{ohm cm})^{-1}$ and high transmittance of more than 75% in the low doping samples. Hence such high conductivity and transmittance is achieved in Mn doped ZnO samples prepared by two-step methodology.

EXPERIMENTAL PROTOCOL:

Mn doped ZnO nano particles were prepared by a two-step process. The seed layer was firstly prepared with the help of sol-gel process. ZAD (solute) was dissolved in 2-methoxyethanol and was kept for magnetic stirring for 2 hours at 60°C. MEA stabilizer was added dropwise to the above solution with the molar ratio of 1:1. A clear and homogeneous solution was formed, which was then left for ageing. It was then filtered and was spin coated on a clean pre heated glass substrate (300°C) at the rate of ...

(57) Abstract :

The invention relates to a low cost instrument in order to detect the degradation of pharmaceutical formulation based medicines. In one example, the invention is based on capacitive method in which the sample will be inserted between the two plates of capacitor which is connected to an arm of Wheatstone bridge.

(57) Abstract :

In this competitive world, it is vital for organizations to survive and remain competitive; so AI can be a tool for doing the same. For a long time, organizations have been using Artificial Intelligence (AI) technology to automate tasks, especially those that need low to high cognitive. The HR department is not an exception. Nowadays, if we see how organizations function (practical and theoretical), we can understand that AI has already emerged. Organizations are using it to automate different tasks. This paper discusses how HRM was practiced before the AI era and why HRM changed to AI-HRM. A conceptual framework has been used to show the relationship between AI technology applications with HR functions (recruitment and deployment, training and development, performance management, compensation management, and employee relationship).

(57) Abstract :

Companies are facing important challenges related to markets' internationalisation, regulatory restrictions and fierce competition, especially during the COVID19 crisis. They should embrace change and be agile to prevent risks and seize opportunities quickly and efficiently. In this article, we examine how artificial intelligence (AI) can help companies to enhance their organisational agility. Based on two systematic literature reviews, we identified the weaknesses of relying only on digital enablers or human resource (HR) practices. Thus, we propose a Framework integrating artificial intelligence and human practices to help companies achieve agility. This latter allows companies to adapt to new societal regulations, customers' expectations, and environmental changes. Ultimately, agile companies can ensure sustainable performance.

(59) Abstract:
As a result of "Gut-finger"ing, The promotor has a low stock of budget. Online Auctions for advertising Media and buying are used to model with-based sales in which the delivery of advertising offers is much cheaper and the limitation of settlements are considered. We come up with a unique programming solution to the investigation job, problem and demonstrate that effectiveness is increased by making a bid for each promotor equal to the sponsor's normal incentive for publicizing an open door in addition to a term corresponding to the fluctuation in the value divided by the number of impressions the sponsor has received. Thus, afterward, we use this finding to demonstrate that the advantages of competing dynamic research in a dynamic climate are negligible. An advertisement's value is determined in this section, and this strategy is used to identify the best technique for selling it. A step-by-step performance is first assessed for a certain time frame during which the bidder submits a specified bid for the sponsor with a dubious classroom. CTR. To get to this stage in the article, we went looking about a technique programming model in which the chosen decision, a game minimum value, is used to decide degree by what the choice means for the decision maker. In the end, we are saying it is a selling in a dynamic climate. However, there has been recent work on an alternate metric, degree known as information angles, in which the choice one makes in a given period is the choice one would make if confronted with an infinite dynamic game. But this period was the last time there in which the data are brought could be utilized in a dynamic future decision.

(5) Abstract: This blockchain is a system and method of efficiently managing commercial flow data using blockchain privacy and security tools. The system comprises plurality of user nodes (100) provided in a communication network (200), and a blockchain database (300). The user nodes are communicatively connected in the distributed network to read, analyze, update and share various commercial inventory values among themselves. The blockchain comprises plurality of blocks to store records of all transactions carried out by the user nodes in the distributed network. Each user node comprises a data processing engine configured to generate a hash value for each block using a private key, link the blocks by tagging the hash value of one block to its next block, broadcast followed by validation of the transaction of records on real time basis, and enable the transaction of records to be reversible using a private key.

Abstract:

The research work undertakes to examine the potential of acid-treated biological waste of agriculture Pea (Pisum sativum) straw Raw for the defluoridation of concentrated fluoride from groundwater following the chemical treatment using formaldehyde in 1:5 w/v ratio at 50° for 4 hours. The effects of working factors (i) pH (ii) Dose (iii) Time (i) fluoride concentration, were checked in the batch mode. The competence of prepared Pea straw Raw was matched with commercially available activated carbon (CAC) and desirable for working at neutral pH (7) conditions. The model of Langmuir Isotherm on adsorption data is enhanced applicability which showed monolayer adsorption over homogeneous adsorbents surface. The pseudo-second-order kinetics data ($R^2 = 0.98$) showed enhanced the results of experiment. The simple synthesis technique and raw material availability made these adsorbents a promising and cost-effective technique for the removal of concentration of fluoride of groundwater.

(57) Abstract :

Latest technology struggle to monitor and manage COVID-19 patients. This IoT-based wearable gadget measures COVID-19 vital indicators. By monitoring possibly contaminated individual's real-time GPS data, the technology warns medical authorities of any quarantine violations. The wearable sensor is connected to an edge node in IoT cloud, where data is processed and analyzed to determine health. The suggested system has three layers: wearable IoT sensor, cloud with API and Android web for mobile phones. First, IoT sensor data is used to determine health symptoms. Next, preventive measures, notifications, and immediate actions are stored in the cloud database. Android mobile app layer notifies and alerts possibly affected patient family respondents. API and mobile app synchronize for anticipating and alarming. Monitoring, managing, and evaluating COVID-19 symptoms require this design. The paper reveals how a digital wearable platform can monitor a COVID-19 patient's health and rehabilitation.

(57) Abstract :
Machine Learning based technique integrated with Six Sigma Methodologies for Predicting the Stress of Employees in an Organization is the proposed invention. The proposed invention focuses on reducing the stress induced on employees by monitoring their tasks and gauging the tasks accomplished by them. The algorithms of machine learning are used for predicting their stress. The six sigma methodologies are used for improving the work ability of employees.

(57) Abstract :
Blockchain based technique to facilitate security in the Online Transactions of E-Commerce Site for smooth Financial Management is the proposed invention. The invention focuses on designing a framework that maintains ledgers in block chain for checking the authenticity of consumers who are making payment. The proposed invention focuses on achieving security and privacy in the payment gateway of e-commerce sites.

(57) ABSTRACT

A system for treating cancer and evaluating chemo-preventive potential of PHC and its prepared chitosan nanoparticles is described. The rats are divided into eight groups, from which group 1 is served as normal control, and group 2-8 are given single dose of DEN and repeated dose of CCL₄, wherein freshly prepared solution of DEN in normal saline is used for the induction of HCC in rats by administering 200 mg/kg, i.p., PHC (2:1:1) in normal saline suspension to administer at doses of 900 mg/kg, wherein serum and tissue samples are collected after anesthetizing overnight fasted rats using intraperitoneal administration of thiopentone sodium at a dose of 40 mg/kg, wherein the collected serum and tissue samples is treated and thereby the chemo-preventive potential of PHC (2:1:1) and its prepared chitosan nanoparticles is evaluated upon determining liver markers, antioxidant parameters, total bilirubin, protein, lipid peroxidation, and liver cancer biomarkers.

(57) Abstract :

The present disclosure relates to a water-dust separator (100) for application in clog resistant water transmissible pavements in supporting sustainable urban drainage system (SUDS) (200). The water-dust separator (100) is configured such that there is no dust entry during dry days (without rainfall) and minimal dust entry during the rainfall days. The water-dust separator (100) is configured to provide a passage to rainfall discharge to traverse through porous layer of a pavement and exits to streams to recycle and utilization. The rainfall discharge exited is water free from the dust from tire of vehicles, fine aggregate transportation, travelling, and so on.

(57) Abstract :

A system (100) and a method (200) for medical imaging and diagnostics using machine learning, comprises of: a data acquisition module (102) for receiving at least an image of a dental matter to be examined; a pre-processing module (104) connected to the data acquisition module (102) for denoising the obtained image and enhance the received image by a denoising technique; a feature extraction module (106) for extracting a plurality of dental features to detect the dental condition of the patient; a classification module (108) for classifying the plurality of dental features into plurality of classes to determine healthy or unhealthy dental condition based on the machine learning technique; and a recommendation module (110) connected to the classification module (108) for recommending treatments to maintain a healthy tooth based on the determined dental condition by the machine learning technique.

(57) Abstract :

The present invention relates to system of coordinated automatic framework for multiple unmanned aerial vehicles and mobile robot used for medical-waste transportation. The objective of the present invention is to solve the problems in the prior art related to coordinated automatic framework for multiple unmanned aerial vehicles control. The present invention discloses an intelligent automatic framework for multi-drone mobile robot system concentrates to obtain optimal routing, seamless handover, and improved energy efficiency for medical waste transportation.

(57) Abstract :

The face detection and recognition system comprises a camera(102) for capturing sparse image data and sending the sparse image data and metadata received from a cloud server(104) to a central node(108) using a communication device(106); a pre-processor(110) for extracting semantic forms and compressing data from the images in the feature domain using a semantic abstraction for generating sparse image data describing low-level features based on compressed image data and generating actionable insights based on the semantic abstraction; a training unit(112) for training a support vector machine based on sparse image data and metadata; and a central processor(114) for detecting a face/object in one particular category in an image and extracting a frame portion including a face/object in one of the categories from a frame of the image using the support vector machine for detecting and recognizing the face/object upon comparing the sparse image data and threshold images from the metadata.

Patent abstract

The present invention relates to an herbal-based sunscreen formulation comprising: an Oil phase; 2.5-3.0g of green tea; 500mg-1.5g of bees wax; 2gm of carrot seeds; 10 ml-50 ml of aloe vera gel; 150mg-1125mg of turmeric powder; 400mg of vitamin E; and 0.4-0.5 wt% of preservative, wherein the method (100) comprises: mixing and heating oil phase, green tea, bees wax, and carrot seeds for 1 hour on a water bath to obtain a mixture (102); mixing aloe vera, turmeric, and vitamin E to the mixture while stirring constantly until a smooth and homogeneous paste is formed (104); and adding a preservative to the formed homogenous paste to obtain the herbal sunscreen (106). The formulated sunscreen is stable, have good

IP Australia

CERTIFICATE OF GRANT INNOVATION PATENT

Patent number: 2021104775

The Commissioner of Patents has granted the above patent on 11 May 2022, and certifies that the below particulars have been registered in the Register of Patents.

Name and address of patentee(s):

Kritika Sachan of Assistant Professor, Department of Pharmacy, Pranveer Singh Institute of Technology Kanpur UP India

Pankaj Kumar of NITTE (Deemed to be University), NGSMIPS, Department of Pharmaceutical Chemistry Mangalore, Karnataka India

Arun Kumar of Associate Professor, Faculty of Pharmacy, Integral university Lucknow, UP India

Adarsh Kesharwani of Lecturer, Mahrishi College of Pharmacy Kaushambhi, UP India

Sunita Devi of Assistant Professor, Dept of Pharmacology, School of Pharmacy, Abhilashi University Chailchowk Mandi, HP India

Chinu Kumari of Assistant Professor, Dept of Pharmacology, School of Pharmacy, Abhilashi university Chailchowk Mandi, HP India

Title of invention:

SYNTHESIS OF NOVEL N-5-FLUORO-4-(4-SULFAMOYLPHENYLAMINO) BENZO[d]THIAZOL-2-YL) BENZAMIDE DERIVATIVES AS POTENTIAL ANTI-INFLAMMATORY AGENT

Name of inventor(s):

Sachan, Kritika; Kumar, Pankaj; Kumar, Arun; Kesharwani, Adarsh; Devi, Sunita and Kumari, Chinu

Term of Patent:

Eight years from 31 July 2021

NOTE: This Innovation Patent cannot be enforced unless and until it has been examined by the Commissioner of Patents and a Certificate of Examination has been issued. See sections 120(1A) and 129A of the Patents Act 1990, set out on the reverse of this document.

Dated this 11th day of May 2022

Commissioner of Patents

PATENTS ACT 1990

The Australian Patents Register is the official record and should be referred to for the full details pertaining to this IP Right.

Abstract:

Chicken Gizzard membrane is the inner lining of chicken's gizzard, which has a yellowish- gold colour. This is why its Chinese name (ji nei jin) carries the meaning of 'gold inside the chicken'. Traditionally it is used in different gastrointestinal weakness. The present study evaluated the antidiarrhoeal, antilulcer, and anticolitis properties of chicken gizzard membrane in SD rats. For the diarrhoea study, rats were divided into five groups (n=4). Group I (normal control) received 1% CMC (1 mL/kg) orally for three days. Group II (disease control) was administered castor oil (0.5 mL). Groups III and IV (test groups) were given chicken gizzard membrane at doses of 50 mg/kg and 100 mg/kg, respectively, along with castor oil. Group V (standard) received Loperamide (3 mg/kg) plus castor oil. Results showed 75% inhibition of diarrhoea and reduced fecal output in the test groups compared to

(57) Abstract:

ABSTRACT DEVELOPMENT AND EVALUATION OF MYRICETIN NANOEMULSION WITH ANTI-LIVER CANCER ACTIVITY Aspects of present disclosure relate to a myricetin nanoemulsion with anti-liver cancer activity and method of preparation. The myricetin nanoemulsion comprising of myricetin; an oil; a surfactant; and a cosurfactant, wherein the myricetin nanoemulsion is a homogenous transparent oil in water (o/w) nanoemulsion. The method comprising of mixing a surfactant and a cosurfactant to obtain a smix mixture; liquefying myricetin in an oil using a vortex mixer to obtain an oil phase; adding oil with the smix mixture and mixing continuously on a magnetic stirrer; adding distilled water drop by drop; and stirring continuously by vortex mixing until obtaining homogenous transparent oil in water (o/w) nanoemulsion. The results of in vitro release evaluation throughout twenty four hours confirmed an initial burst release and sustained releases afterwards. The myricetin nanoemulsion had an entrapment efficiency of 95.70% and the drug release efficiency of the myricetin nanoemulsion was found to be 92.37 %. Figure 1 shall be reference figure.

(57) Abstract :

ADVANCEMENT OF DRUG DELIVERY SYSTEM BASED ON NANOTECHNOLOGY AND GREEN CHEMISTRY: GREEN NANOMEDICINE ABSTRACT This invention discusses the impact of green and environmentally safe chemistry on nanotechnology-driven drug delivery in a new area termed "green nanomedicine". Studies have shown that among many examples of green nanotechnology driven drug delivery systems, those receiving the most attention include nanomaterial particles, polymers, and biological materials. Furthermore, green nano drug delivery systems based on environmentally safe chemical reactions or using natural biomaterials such as plant extracts and microorganisms are now producing innovative materials that are revolutionizing the field. This review discusses the use of green chemistry design, synthesis, application principles, and eco-friendly synthesis techniques with low side effects. The study ends with a description of critical future efforts that must emerge for this field to continue to grow.

(57) Abstract :

The present invention relates to the synthesis and evaluation of anti-fungal cream. The synthesis involves the 2-bromo-1-phenylethanone (1) (0.01 mol), phenol (2) (0.01 mol) and K₂CO₃ (0.02 mol) in dry acetonitrile was refluxed for about 6 h. The mixture was filtered and solvent was removed under reduced pressure. The obtained product was purified by recrystallization from ethanol to afford compound 2-phenoxy-1-phenylethanone (3). The Schiff bases SA-1 and SA-2 were prepared by refluxed of compound (3) with different aromatic anilines in the presence of glacial acetic acid (4) in ethanol. The molecular docking studies of, the compounds SA-1 and SA-2 were docked into the binding pocket of human squalene epoxidase (6C6N) and 14- α -demethylase (5TZ1) target proteins belong to *Candida albicans*. Anti-fungal activity of the test compounds was compared with the standard drug Clotrimazole and Terbinafine.

(57) Abstract :
A method (300) for identifying a binding site of N-(2-(1H-imidazol-4-yl)ethyl)-4-(5,11-dioxoisoindolo[2,1-a]quinazolin-6(5H,6aH,11H)-yl)butanamide, the method comprising: developing pharmacophore models to extract features from the N-(2-(1H-imidazol-4-yl)ethyl)-4-(5,11-dioxoisoindolo[2,1-a]quinazolin-6(5H,6aH,11H)-yl)butanamide; validating the developed pharmacophore models by comparing with pre-defined models of existing p53-Mdm2 inhibitors drugs; performing a ligand-based virtual screening (first virtual screening) of a database of drugs with the validated pharmacophore models; performing a structure-based virtual screening (second virtual screening) of the validated pharmacophore models by structural docking of a target protein into the validated pharmacophore models; assigning a score to each pharmacophore model of the N-(2-(1H-imidazol-4-yl)ethyl)-4-(5,11-dioxoisoindolo[2,1-a]quinazolin-6(5H,6aH,11H)-yl)butanamide in order to identify the validated pharmacophore models with a high binding affinity and efficiency; and comparing the score obtained from the ligand-based virtual screening (first virtual screening) and the structure-based virtual screening (second virtual screening) for classifying the scored pharmacophore models based on the target protein binding affinity and efficiency for the p53-Mdm2 inhibitors.

Abstract

The present disclosure is related to the emulsion of Saffron aqueous extract, olive oil and coenzyme Q10 (CoQ10). The emulsion was prepared by dry gum method and evaluated against an anti-neoplastic doxorubicin that causes cardio toxicity in rats. The prepared emulsion was stable thermodynamically. The pharmacological activity of emulsion in doxorubicin treated rats indicated better AST, ALT, LDH, creatinine, lipid profile (HDL, TG, LDL, VLDL and TG), SOD, catalase and GSH. The heart weight which was enhanced because of doxorubicin treatment was also reduced by inverted emulsion. The inventive emulsion also showed cardio protection against doxorubicin induced toxicity as it regularizes enzymes, lipids and oxidative expressions.

(57) Abstract :

The present invention pertain to the realm of Biomass Shredder and, more specifically to a solar-powered biomass shredder equipped with an intelligent feed-backward system, the system comprising a stainless-steel frame, a feeding hopper to feed the crop residue into a cutting unit (24), an electric motor and an AC servo motor to regulate the speed and direction of the motion in response to a feedback received, a plurality of solar panels with solar inverter to convert DC to AC to operate the system, a net meter connected to the solar inverter to measure the generation of electricity through solar panels. (57) Abstract : Abstract: The very intricate problems in processes of heat and mass transfer can be solved nowadays through supercomputing AI. Coupling the computational capability of supercomputers with the understanding and analysis capability of AI, engineers can achieve the following: Intricate simulations: Simulate rather complex phenomena of heat and mass transfer to a new level of accuracy, turbulent flows, multiphase systems, and coupled/heat-mass-momentum transfer. ■ Perform optimization by data analysis: The insurmountable data generated due to experiments and simulations will be analyzed to identify optimal operating conditions and design parameters. AI algoritluns can uncover latent patterns and correlating trends that would not be easily deduced through a manual inspection of data. • Create predictive models: Build some predictive models for the estimation of heat and mass transfer rates, energy consumption, and environmental impacts. These models will be utilized in real-time monitoring and control for proactive tuning to enhance performance. ■ New materials discovery: In this regard, new materials and processes designed to gain such properties for the improvement of heat and mass transfer can be tested. AI can enhance the speed of discovery of new materials via screening techniques over vast material databases with predictions around performance. ■ Energy Systems: Design of new or retrofitting of existing heat exchangers, boilers, and cooling systems toward improved energy efficiency and lowered greenhouse gas emission. ■ Manufacturing Processes: The efficiency and quality of operations such as casting, welding, and drying will be improved by the optimal design of heat and mass transfer conditions for them. ■ Environmental Control: New and improved design for the techniques of air conditioning and ventilation to improve the indoor air quality and simultaneously reduce energy consumption. ■ Material Science: Innovative materials with improved properties of thermal conductivity or moisture absorbing for applications in the electronic, textile, and energy storage domains.

(57) Abstract :

The present invention relates to Nanostructured compounds can exhibit enhanced pharmacological activity and hence, can be very promising strategy for control of multi drug resistance (MDR) pathogens. This work explored the use of Ocimum sanctum leaf extract to prepare Chitosan- tuls nanoparticles and elucidate their antibacterial efficacy against pathogenic bacteria. Different concentrations of extract were used to form a range of nanoparticles and their formation was assessed by using UV spectroscopy. The results indicated that CS-TL NPs showed a dose-dependent response against tested bacteria. The antibacterial efficacy of CS-TL NPs was examined against MDR Escherichia coli (NCIM 2571) and pathogenic Bacillus subtilis (MTCC 441)The CSNPs which showed the best antibacterial activity were characterized using SEM, Zeta Potential, X-ray diffraction pattern and Fourier transform infrared spectroscopy. The studies shows that the CS-TL NPs with best antimicrobial activity, had an average hydrodynamic diameter of 1193 nm and a zeta potential of 27.3±1.6 mV.

(57) Abstract :

The lawyer serves as the primary liaison between the Plaintiff and Appellant, resolving their court-related issues. For many years, society did not have access to lawyers. They face considerable difficulty in locating an appropriate counsel for their case, and at a hefty expense. Frequently, individuals are duped by attorneys and charged exorbitantly expensive fees, as lawyers profit handsomely from each case. This project (LEGAL-EASE) was created to assist individuals dealing with legal challenges by providing simple and optimum answers to their situations. It features a user panel and a lawyer panel, where both parties may engage securely, and the primary component of this project is the lawyer recommendation system, which will utilise content-based and collaborative-filtering with a multi optimizing algorithm AGE-MOEA (Adaptive Geometry Estimation based Multi Optimization Estimation Algorithm), A Pareto interface format for calculating the result that replaces crowding distance to assist consumers in simply locating the best and optimal lawyer. This project will help the government by contributing towards court case management and will help courts to boom digitally.

(57) Abstract :

It consists of an RMS server with an RMS database, which holds files containing information on employees, their abilities, their schedules, and the projects on which they are now working, among other things. RMS database files include information from external business databases and the information entered directly into the system. Employees' scheduled activities are shown on a calendar in various ways, with different types of scheduled activities being highlighted in different colors to differentiate them. Using a search and scheduling function, human resources with the relevant abilities and availability may be identified, identified, and allocated to projects. A variety of parameters, including the length of time necessary, the level of skill required, and other characteristics, are entered to reduce the search area. This component assigns people to projects and updates the system calendar with the project assignments assigned to the individuals. Through interfaces with other databases, the information stored in the RMS database may be updated. A single user interface may access both the RMS and external databases. It is important to utilize a computer program to operate the RMS server and the RMS database for them to function properly

(57) Abstract :

This invention examines how financial mindfulness affects women entrepreneurs' financial literacy and biases. Women's particular financial behavior has been widely discussed. Financial literacy and behavioral biases are a recurring research issue, but their relationship to women's entrepreneurship is unclear. Using financial awareness as a mediator, we studied the impact of financial literacy on women entrepreneurs' biases. Using AMOS 21, a random sample of 346 women entrepreneurs was analyzed. Financial literacy reduced anchoring and herding bias, but not mental accounting bias. Financial knowledge reduced mental accounting and herding bias for financially savvy women, according to the moderation analysis. Financial awareness does not negatively catalyze financial literacy and anchoring bias. We propose a distinct theoretical thread with practical consequences for women entrepreneurs by combining financial literacy, mindfulness, and behavioral biases. We present innovative ways to solve the problem of women entrepreneurs in developing countries making suboptimal financial decisions.

(57) Abstract :

It is a great challenge to get an understanding of the Consumption Pattern. Unless the marketers know what the consumer is willing to consume he will not be able to fulfill his target sales and earn the profit he desires. The study of Consumption pattern is important because it helps to know how consumers are making their decisions to buy. It helps us to know the need and wants of consumers. The contribution of women in decision making is increasing with growing number of nuclear families, educated women and working women. Today, lifestyle study has become an integrated part of consumers' lives. The number of middle class working women is rising sharply. This is leading to the introduction of women oriented products. Since India has the potential to grow rapidly for some years to come, its emerging middle class will strengthen and reinforce its growth. The women consumers on one hand and the middle class on the other, together we can say middle class women in India would be a great target market for organizations all over the world.

(57) Abstract :

The failure of the microfinance institution (MFIs) to respond to their customers' needs and expectations is one of the main reasons they lose customers. Nowadays, customer satisfaction becomes a central concern for MFIs in order to improve the quality of their products and services. This invention aims to develop a decision-making support tool to help managers in the microfinance industry perform scenario analysis and then plan customer satisfaction strategies. We managed to build a Bayesian networks model; such an approach is widely required for modeling complex systems characterized by scarce or uncertain information. It can also consider several factors and the interactions among them, which can successfully meet the current requirements.

(57) Abstract :
A voice-directed mobile terminal may be a part of a worker resource management system, allowing a user and the voice-directed mobile terminal to converse. At the very least, the mobile terminal may be connected to a computer. Voice-directed mobile terminals may be integrated into the computer's worker resource management module. Based at least in part on user behavior, the worker resource management module may detect user productivity trends and generate job evaluation forecasts. The worker resource management module may give management job assessment projections or user productivity trends that can be used to make resource allocation choices.

(57) Abstract :
Systematic approach along with Statistical Techniques for Analysis of Abnormal Returns on Indian Stock Market due to Natural Disaster is the proposed invention. The invention aims at analyzing the factors that are responsible for providing abnormal returns in stock market. The proposed invention implements techniques of Artificial Intelligence for analysing and predicting the factors associated with natural disaster that has impacted the growth of stock market. The Indian stock market is considered for the study.

(57) Abstract :

The model (Figure1) claimed in claim1 aims to analyze and evaluate the Business models of Micro Finance Institutions' across different legal forms in India. The four aspects of business model evaluation taken up in the model are: as to how MFI design, cater, seize and retain value. The aspects further undertaken in the study includes: 1). How MFI design value The value designing concentrates on a value proposition to construct value for a Customer Segment through a distinct mix of elements catering to that segment's needs. For MFIs the value proposition is women empowerment through financial inclusion by offering them microloans (microfinance) without any collateral. The outreach indicated by number of active borrowers and Gross Loan Portfolio has been taken as proxy of value creation. 2). How MFI caters value The distinguishing feature of MFIs is provision of financial services at the door step of borrowers (Customer). The delivery channel backed by financing structure majorly consists of credit officers for outreaching the borrowers. The key activities performed also include financial education along with training and guidance for employing the funds in income generating activities. The variables undertaken as proxy for measurement of MFIs' delivery channels include: CAR, DER as an indicator of financing structure, ABCO to measure staff Productivity, FCR for Expense and OER for Efficiency of MFIs in catering value. 3). How MFI seizes value The MFI seize value from recurring revenues resulting from ongoing payments to either deliver a value proposition to customers or provide customer support. To seize value, the revenue stream of MFIs consists of Interest income on loan portfolio and other fee and commission income. The variables undertaken as proxy for measurement of MFIs' ability to capture value are taken as: ROA, ROE for indicating overall performance and YIELD on loan portfolio for revenue stream. 4). How MFI retains value The MFI retains value by taking regular feedback from their customers in order to retain them through providing quality services. The variables undertaken as proxy for measurement of MFIs' value retention are: OSS and PAR 60. The type of MFIs operating all over India comprise of NBFC-MFI, Section 8 Companies, Society & Trust, Cooperatives and Others. The major issue that model address is as to what is the performance of MFI Business Models in India The model can be used as base for MFI business models comparison across legal forms in India. The influence on various variables and dimensions of business models can be analyzed and further be modified depending upon the need of the hour. The insight on various dimension of business model can help in structuring a more sustainable model with greater in depth outreach. The study is of help for social entrepreneurs, business model analyst, policy makers and researchers in the field of Micro Finance specifically in India.

(57) Abstract :

This invention is concerned with the development of a modeled framework for strategic implementation of Sustainable Development Goals in Higher Education Institutions. The invention seeks to claim a multi-level model describing the input, process, output and outcome and their components at various levels. The input component A consists of first internal elements as human resources at Level 1 (Management), Level 2 (Academic Staff), Level 3 (Non Academic Staff-Staff), Level 4 (Supporting Staff) and Level 5 (Students). The second internal element is Organizational Policies/Directions and the third internal element is Cost. The external element in input is taken as Regulatory mandates and compliances. Further, the model describes the activities to process the inputs at various levels. The process component B of the model describes the strategies for implementation at various levels of inputs. The strategies for internal element constitutes at first the activities/programs for Human resources at Level 1 (Management), Level 2 (Academic Staff), Level 3 (Non Academic Staff-Staff), Level 4 (Supporting Staff) and Level 5 (Students) for creating awareness and encouraging practices, secondly it incorporates the activities for formulation of organizational policies/directions and thirdly it suggest practices in cost considerations for implementation of SDGs. The external element of the process component includes activities related to regulatory mandates and compliances as suggested in policies of regulatory bodies, statutes, mandates of the external agencies concerning SDGs, influencing the HEI either directly or indirectly. The third component C of the model is output, yielded at various levels of human resources and organizational policies/directions in terms of sustainable development awareness, learning, modeled behavior and responsible attitude of stakeholders at various levels as identified by the inventor; inclusive, justified and sustainable organizational policy framework and Grants and aids from relevant agencies and savings due to sustainable practices under Cost Considerations. The model's component D i.e. outcome describes the achievement of specific SDGs through strategic implementation of inputs at various levels of human resources management and practices, organizational policies/directions and cost. The component E and F constitutes continuous monitoring and evaluation and feedbacks respectively, from time to time at all levels of inputs and process/activities. The invention will help HEIs achieve SDGs through strategic implementation of input into given process to yield desired output and outcome at multi-levels in HEIs.

(57) Abstract :

Efficient and Optimized Development of the Eco-Friendly and sustainability based data centers Abstract: Due to the exponential growth of data and the rising demand for public cloud services, a large number of new, huge data centres are being planned or constructed around the globe. Due to the widespread alarm generated by the COVID-19 epidemic, a number of firms have moved swiftly to study various strategies of securing their operations. Consequently, the number of data centres has grown. Cloud service providers such as Amazon Web Services, Microsoft, Google, Facebook, and Alibaba have generated billions of dollars due to the growing popularity of cloud computing. In 2020, Microsoft's commercial cloud division made over \$50 billion. Jeff Bezos, founder and chief executive officer of Amazon, has announced the company's financial results for the first quarter of 2021. According to him, AWS's estimated annual revenue has exceeded \$54 billion. This is a 32 percent rise from the prior year. As the amount of data processed and the size of data centres increase, it is crucial that they take measures to reduce the environmental damage they do. To maximise the energy efficiency of their data centres, companies should investigate and apply eco-friendly alternatives.

(57) Abstract :

The financial services sector has undergone major changes in recent years as a result of new technologies.Business processes in the creation of a banking product, building a long- term strategy and successful project activities are moving into a digital interactive model of interaction in the digital environment.In the emerging markets there are FinTech start-ups in areas such as the service of individuals and private capital management, which are in the lead at the expense of customer-friendly services. Financial technologies are radically changing the competitive environment of financial institutions and the structure of their functioning markets, reducing the branch network of banks, the number of employees in the financial services sector, while expanding their provision in real time, creating conditions for multifunctional digital banks with a low base of current costs by simplifying traditional systems.The FinTech segment of the capital market contributes to the formation of a new business model, offering users a personalized service option combined with lower fixed costs and price parameters.The research presented in the scientific article on the basis of monitoring the practice of financial technologies in the Russian banking system, allows to identify current trends and trends in the development of financial services in the new digital competitive environment, which should be taken into account by the bodies of state regulation and banking supervision.

(57) Abstract :
Determining an updated first group health report for the first group of employees working in the first facility, region, division, or team, wherein the updated first group health report is determined based on the updated health profile for the employee. Electronic monitoring of an electronic device being operated by the employee on the network said third data including data relating to the operation of the electronic device by the employee. The employee workstation is configured to sense the employee's biometric characteristics and to output corresponding biometric health data indicative of the employee's biometric characteristics including multiple biometric sensors. Sensor data is based on at least one sensor monitoring activity of the individual associated with and distinct from the covered entity. Monitoring, with at least one sensor, activity-level related data of the employee associated with and distinct from a workplace entity. Receiving monitoring information from a personal fitness tracker associated with the first employee.

(57) Abstract :
Abstract Many studies have been undertaken all over the world to analyze employee happiness in many sectors, and researchers have discovered that contentment or discontent varies from person to person, despite the fact that the reasons stay consistent. An organizational aspect may not influence an individual; nevertheless, the same factor may be the source of frustration for another employee. The present investigation focused on educators in the higher education industry in Lucknow, Uttar Pradesh's capital city. Faculty members are a vital part of any community for a variety of reasons, and their work is both valued and important. Instructors play a critical role in the lives of children and adolescents from the very beginning of their lives; the importance of instructors cannot be overstated. The present work is an effort to come up with a model, that can be used to assist the University management in designing faculty oriented strategies, leading to a holistic development of the University.

(57) Abstract :

Developmental plasticity is a well-known individual survival strategy, organisms are usually limited in their ability to read environmental cues and to integrate present and past information for optimally adjusting their phenotype to the state of the environment. Our study was designed to evaluate the effects of line separation on the ontogenesis of developmental variants under standard laboratory conditions. Despite an existing broad body of knowledge surrounding the developmental plasticity of the ladybird Propylea dissecta (Mulsant)(Coleoptera: Coccinellidae) but still experimental evolution studies are still lacking. Our findings revealed the effects of selection on developmental speed over 15 generations. Thus, the ratio of developmental variants changes according to the applied selective pressure but shows to be bimodal in both from F1 to F15 generations.

(57) Abstract :

The present invention relates to heterocyclic compounds and the method of preparation of a compound of formula (V). In which, 1,3-oxazine compounds containing dihydro-1,3-oxazine ring system exhibited a wide spectrum of pharmacological activities such as anti-tumor, anti-bacterial, anti-inflammatory activity and also known for Type 2 diabetes mellitus (T2DM) characterized by metabolic disorder and hyperglycemia (hepatic glucose overproduction) because of insulin resistance is complex chronic disease. Coumarins having conjugated double ring system makes it exclusive molecules for research because of catering an industry of cosmetics and perfume ingredients, food additives, and especially in the medicinal industry in the synthesis of an important medicine used as antibacterial, anticoagulants, antioxidant and antifungal. According to the present invention, this the great interest to synthesized the hybrid molecule having oxazine and coumarin moiety to turn into effective potential candidate.

(57) Abstract :
DEVELOPMENT OF EDUCATIONAL ASPIRATIONS SCALE OF HIGHER SECONDARY SCHOOL STUDENTS ABSTRACT Adolescence marks the transition from childhood
dependence to early adulthood freedom and responsibility. The desire for education is defined as a psychological construct that reveals the cognitive type of motivation of a person. An
individual's educational aspirations are goals that they have set for themselves. Parental encouragement refers to the incentive or additional assistance that parents provide to their children in
order to promote active involvement in school. The current invention was developed in the Haryana town of Hisar. The 240 respondents in the study's sample comprised a total of 240
respondents, 120 of whom were from Hisar. Both the Educational Aspiration Scale and Sharma's Parental Encouragement Scale were used to assess students' educational desires. The majority
of respondents had modest educational objectives, according to the study's findings, and thought their parents encouraged them to a moderate amount. The promotion of their high school
children's educational aims and aspirations by their parents was discovered to be highly connected.

(57) Abstract :

The modeled framework in figure 1 is based on three step procedure. The step1 is the risk identification. The risk is classified into three categories as Environmental risk, Business Risk and Economic risk. The Environmental risk includes climate change, biodiversity loss, loss of natural habitat, extinction of natural resources including migratory and endangered species, pollution- land, air, water and sound, diseases due to famine, drought, epidemic, pandemic etc. food and fresh water insecurity. The Business risk comprises price externalities in raw material and offerings, stranded assets, capital depletion, disruption in supply chain and value chain, low liquidity and goodwill loss. The economic risk consists of fluctuations in market and business conditions due to fluctuations in macroeconomic situations majorly due to global climate crisis. The Step2 in the framework is about the mitigation of the identified risk through ESG initiatives. The environmental initiatives include responsible and sustainable utilization of natural resources, responsible use of technology, limiting processes to reduce carbon footprint and responsible energy consumption. The social initiatives are taken up for employees and the community. For employees the DEI focused policies and practices and sustainable human resource management and development practices are suggested in the framework. In community initiatives the efforts for responsible, green and sustainable offerings (financial products and services), financing and investment are required. The Governance initiative as suggested in the framework constitutes innovative, green and sustainable business models, policies framework for DEI practices for employees, policies framework for supporting green sustainable and inclusive offerings to the community, regulating and monitoring green investment, monitoring flow of finance and measuring impact on environment, transparency in operations and reporting and ethical practices and code of conduct. The third step involves integrating ESG initiatives with the SDGs attainment. The environmental initiatives results in protecting the environment by overcoming environmental risk thus identified in step 1 in the modeled framework and will contribute in attaining relevant SDGs and its targets. Under social initiative the benefits yielded by the ESG initiatives will contribute in development of employees and the communities as the important stakeholders in the industry. For employees the DEI initiatives in HRM and HRD practices and policies will lead to the attainment of the relevant SDGs and its targets. For community the responsible, green and sustainable offerings (financial product and services), training, education and investment will lead to the attainment of the relevant SDGs and its targets mentioned in detailed framework. The governance practices as innovative, green, sustainable and inclusive policy and regulatory framework will ensure attainment of relevant SDGs and its targets through effective governance.

(57) Abstract :
ANALYSING THE APPLICATIONS OF ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING FOR SMART VISION FOR BUILDING AND CONSTRUCTION 4.0 TECHNIQUES A method for the development of an infrastructure system for artificial intelligence and machine learning may include one or more storage systems, each of which may include one or more storage devices, and one or more graphics processing units, each of which may be set up to communicate with the one or more storage systems via a communication fabric. The system establishes a first heading or position uncertainty related to the pedestrian's head position or head orientation and a second heading or position uncertainty related to the pedestrian's foot position or foot orientation. In addition, methods for smart sensor and vision data collecting, data cleaning techniques, and data storage are covered. The difficulties in generating models and solutions to these difficulties are also highlighted. Future trends in these domains and possible research avenues are also presented. This article presents a state-of-the-art review of the applications of Artificial Intelligence (AI), Machine Learning (ML), and Deep Learning (DL) in building and construction industry 4.0 in the facets of architectural design and visualization, material design and optimization, structural design and analysis, offsite manufacturing and automation. (57) Abstract :

The invention relates to a deep learning-based rapid post-earthquake damage detection of RC resisting- moment frame buildings. The invention begins by assembling a diverse dataset of pre and post- earthquake images of RC resisting-moment frame buildings, annotated with varying degrees of damage severity. Data pre-processing techniques are applied to standardize the images and enhance their quality, mitigating the impact of noise and data irregularities. A Convolutional Neural Network (CNN) architecture is designed and trained using the pre-processed data to learn intricate patterns and features indicative of damage levels. The proposed deep learning model exhibits robustness and generalization capabilities, allowing it to detect and classify damage levels accurately across different earthquake scenarios. To enhance the model's reliability, complementary data from remote sensing, IoT devices, and structural sensors are integrated into the system. The developed deep learning-based approach demonstrates promising results in real-time damage assessment. In post-earthquake situations, the model processes incoming building images swiftly, providing immediate predictions of damage severity. Decision rules and thresholds are established to guide emergency responders and authorities in determining the appropriate actions for affected buildings.
