Report on Zoological Museum visit by the students of B.Sc. Life-Science (H)

Studying is not confined to only reading books and papers and research, it encompasses all the sources from which knowledge can be obtained. Thus, learning consists of both theoretical and practical approaches. As far as practical studies are concerned, observation of the systems and the nature around is valuable. The curriculum of B. Sc. Life-Science (H) program requires a vast knowledge of animal diversity, for this purpose, a visit to Zoology museum of University of Lucknow was scheduled on Friday, 12th April 2019. The department owns one of the best museum with ample of specimens demonstrating the diverse group of animal kingdom. The students were able to observe and take note of the different phyla and the diversity among them. Ranging from the less organized sponges to the most diverse and complex mammals, students studied the spineless invertebrate diversity as well as the vertebrates. The specimens preserved as well as the stuffed animals were most intriguing, and the students were told many of their general and striking features. No doubt after this visit, the students have become knowledgeable of their nature and the diversity of both animals and the systems around them.
