Report on "Digital India "

In 2015, the Government of India launched a massive campaign named "Digital India". This was done to make the government services accessible in various parts of the country. The main aim was to improve access to technology to the people of the country.

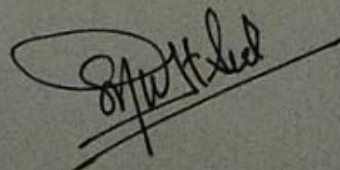

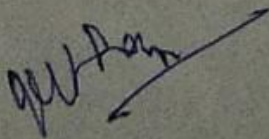

The government worked on improving internet connectivity and made sure that it was easily accessible to the remote and rural parts of the country. One of the initiatives included a plan to connect the rural parts of the country with high-speed internet.

Digital India was launched on **1 July 2015**, by the current Prime Minister of India Narendra Modi. The campaign drastically boosted the use of electronic services and products. The project is run by a Government entity called **Bharat Broadband Network Limited (BBNL)**. Keeping this view in mind a group of teachers and students of Department of Electronics & Communication Engineering, Integral University went for a visit to a village Behta located at Kursi Road ,Uttar Pradesh 226028.

Objectives:

The massive campaign is divided into three parts which hope to achieve the following objectives:

1. A stable, secure digital infrastructure connecting every part of the country
2. Easy access to online government services (e-Governance)
3. Digital literacy of the masses
