<sup>\*</sup>Qualifying (Non-Credit Course)

**B.Sc.** Industrial Chemistry

Effective from Sess	sion: 2025-26								
Course Code	B190101T/CH131	Title of the Course	Fundamental of Industrial Chemistry	L	T	P	C		
Year	I	Semester	I	5	1	0	4		
Pre-Requisite	10+2 with Chemistry Co-requisite -								
Course Objectives	atomic structure, che metallurgical operation	mical bonding, organs, metals and alloys, he	ent Indian chemistry and the fundamentals of an compounds and nomenclature, liquid creat, thermodynamics, and chemical equilibrium. pleting the course, the student will be able to expect the course of the course.	ystal That	and s is four	olid-st nd to h	tate, ave		

	Course Outcomes
CO1	Learners will be able to understand the ancient Indian chemistry and fundamental chemical science would enable students to
	evaluate atomic structure, its properties, principles, shapes, and electronic configurations.
CO2	Learners will be able to understand the principles, types, and strengths of various chemical combinations would enable students
CO2	to apply concepts of chemical bonding effectively.
CO2	Learners will be able to evaluate different types of organic reactions and their mechanisms in a stepwise manner would enable
CO3	students to <b>predict</b> reaction outcomes systematically.
004	Learners will be able to understand the chemistry of liquid crystals and solid states, including crystal lattices, laws of
CO4	crystallography, crystal systems, unit cells, and space lattices, would enable students to <b>explain</b> their structural properties.
005	Learners will be able to understand and evaluate the metallurgical operations, metals and alloys, heat, thermodynamics, and
CO5	chemical equilibrium would enable students to <b>apply</b> these concepts in industrial and laboratory practices.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Indian Ancient Chemistry and Fundamentals of Chemical Calculations	Introduction of ancient Indian chemistry, contribution of Indian chemists in context to the holistic development of modern science and technology. Atomic weight, molecular weight, equivalent weight, mole concept, percentage yield, composition of liquid mixtures and gaseous mixtures, molarity, molality, normality.	6	1
2	Atomic Structure	Quantum numbers, Pauli exclusion principle, Hund's rule of maximum multiplicity, Aufbau's principle, Idea of de-Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrödinger wave equation, significance of $\Psi$ and $\Psi^2$ , quantum numbers, radial and angular wave functions and probability distribution curves, shapes of s, p, d, orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule.	8	1
3	Chemical Bonding	Valence bond theory (VBT), valence shell electron pair repulsion theory (VSEPR), shapes of the following simple molecules and ions containing lone pairs and bond pairs of electrons: H <sub>2</sub> O, NH <sub>3</sub> , SF <sub>6</sub> , PCl <sub>5</sub> , SF <sub>4</sub> , ClF <sub>3</sub> , I <sub>3</sub> , ClF <sub>2</sub> and SO <sub>4</sub> and H <sub>3</sub> O <sup>+</sup> , molecular orbital theory (MOT), molecular orbital diagrams bond orders of mononuclear and heteronuclear diatomic molecules and ions (N <sub>2</sub> , O <sub>2</sub> , C <sub>2</sub> , B <sub>2</sub> , F <sub>2</sub> , CO, NO, and their ions).	8	2
4	Organic Compounds and Nomenclature	Classification, generic and trade names of organic compounds, functional group, aliphatic compound (alicyclic & cyclic), aromatic compound, heterocyclic compound, petroleum, natural gas, crude oil.	6	3
5	Fundamentals of Organic Chemistry and Catalysis	Cleavage of bonds (homolysis and heterolysis), reaction intermediates (carbocation, carbanion, and free radicals), electrophiles and nucleophiles, aromaticity: benzenoids and Hückel's rule, inductive effect, electrometric effects, mesomeric effect, resonance, hyperconjugation and stearic effect. Homogeneous and heterogeneous catalysis, basic principles, mechanisms, factors affecting the performance, enzyme catalyzed reactions.	8	3
6	Liquid Crystal and Solid State	Classification and molecular arrangements, liquid state, density, diffusion, viscosity, evaporation, surface tension, effect of temperature and pressure on surface tension, parachor - definition and applications. Crystal lattices, laws of crystallography, crystal systems, unit cell, space lattice.	8	4
7	Metallurgical Operations, Metals and Alloys	Pulverization, calcination, roasting, refining, principles of extraction of metals, extraction of iron and copper from their ores. Important metals and alloys; mechanical and chemical properties of lead, nickel, iron, titanium and their alloys and their applications.	8	5
8	Heat, Thermodynamics and Chemical Equilibrium	Heat capacity of pure gases and gaseous mixtures at constant pressures, sensible heat changes in liquids, enthalpy changes, entropy, thermodynamic laws, processes and functions, free energy, activity co-efficient, and fugacity, effect of temperature and pressure on equilibrium constants in gaseous system (formation of ammonia).	8	5

Effective from Session: 2025-26											
Course Code	B020101T/CH151	<b>Title of the Course</b>	L	T	P	C					
Year	I	Semester	I	5	1	0	4				
Pre-Requisite	10+2 with Chemistry	Co-requisite	-								
Course Objectives	enabling students to	predict elemental prop	cal bonding and periodic properties and trends act erties based on their position in periods and gro nistry, organic reaction mechanisms, and other fur	ups, a	nd to	develo	ра				

	Course Outcomes
CO1	Learners will be able to <b>explain</b> molecular polarity and weak chemical forces such as van der Waals forces, ion-dipole forces, dipole-dipole interactions, and induced dipole interactions, and <b>apply</b> current bonding models to predict the structures and bonding parameters of simple inorganic and organic molecules.
CO2	Learners will be able to <b>analyze</b> the periodic table as a tool for predicting elemental properties and <b>demonstrate</b> detailed insights into periodic trends.
CO3	Learners will be able to <b>evaluate</b> the fundamentals of chemical reactions, including reactive intermediates, transition states, and factors influencing bond formation, and <b>interpret</b> reactors, catalysts, stereochemistry, and the formation of major and minor products in organic reactions.
CO4	Learners will be able to <b>explain</b> stereochemistry, including two-dimensional and three-dimensional structures of molecules, and <b>analyze</b> their roles in reaction mechanisms.
CO5	Learners will be able to <b>describe</b> solutions and colligative properties, including Raoult's law, relative lowering of vapour pressure, molecular weight determination, and osmosis, and <b>apply</b> these principles in relevant contexts.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Molecular polarity	van der Waals forces, ion-dipole forces, dipole dipole interactions, induced dipole interaction, dipole moment and molecular Structure (Diatomic and polyatomic molecules), Percentage ionic character from dipole moment, polarizing power and polarizability. Fajan's rules and consequences of polarization.	8	1
2	General Periodic Properties	Electronic configurations of elements, types of radii (covalent, crystal and Vander Waal's radii), electron affinity, electronegativity, and ionization potential. Pauling scale, Mulliken electronegativity scale, Slater rules, Allred and Rochow scale, diagonal relationship.	8	2
3	Periodic properties of Atoms (with reference to s & p- block)	Brief discussion, factors affecting and variation trends of following properties in groups and periods (with reference to s & p-block) such as effective nuclear charge, shielding or screening effect, Atomic and ionic radii, Electronegativity, Ionization enthalpy, Electron gain enthalpy.	8	2
4	Mechanism of Organic Reactions	Curved arrow notation, drawing electron movements with allows, half-headed and double-headed arrows, homolytic and heterolytic bond fission, Types of reagents electrophiles and nucleophiles.	6	3
5	Essentials of Isomerism	Concept of isomerism, Different types of isomerism, their nomenclature and associated physico chemical properties. Structural isomerism: chain isomerism, positional isomerism, functional isomerism and metamerism, keto-enol tautomerism.	6	3
6	Stereochemistry-I	Optical isomerism: elements of symmetry, molecular chirality, enantiomers, stereogenic center, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centers, disasteromers, threo and erythro diastereomers, meso compounds, resolution of enantionmer, inversion, retention and recemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature.	8	4
7	Stereochemistry-II	Geometric isomerism: determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds.  Conformational isomerism: conformational analysis of ethane and n-butane; conformations of cyclohexane, axial and equatorial bonds, conformation of mono substituted cyclohexane derivatives, Newman projection and Sawhorse formulae, Fischer and flying wedge formulae, Difference between configuration and conformation.	8	4
8	Solutions and Colligative Properties	Dilute Solutions, Colligative Properties, Raoult's law, relative lowering of vapour pressure, molecular weight determination. Osmosis - laws of osmotic pressure, its measurement, determination of molecular weight from osmotic pressure. Elevation of boiling point and depression of freezing point. Derivation of relation between molecular weight and elevation in boiling point and depression in freezing point.	8	5

Course Code	B190102P/CH133	Title of the Course	Basic Analytical Methods	L	T	P	C
Year	I	Semester	I	0	0	4	2
Pre-Requisite	10+2 with Chemistry	Co-requisite	-				
Course Objectives		of various concentrat	d laboratory practice (GLP), calibration apparatus, prions, determination of viscosity, the surface tension				

	Course Outcomes
CO1	Learners will be able to <b>understand</b> and perform good laboratory practice (GLP).
CO2	Learners will be able to <b>understand</b> the basic analytical and technical skills needed to work effectively in the various fields of chemistry.
CO3	Learners will be able to <b>remember</b> to keep records of all experiments performed in the manner that is required in laboratories.
CO4	Learners will be able to <b>determine</b> the viscosity and surface tension of liquids.
CO5	Learners will be able to <b>prepare</b> standard solutions and solutions of various concentrations.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Good Laboratory Practices (GLP)	Good laboratory practices, Calibration of thermometer and burette	15	1,2,3
2	Simple Laboratory Techniques	Crystallization, fractional crystallization, distillation, fractional distillation, melting point and boiling point determination.	15	2,3
3	Viscosity an d Surface Tension of Liquids	Determination of relative viscosity of a liquid with water and determination of % composition of an unknown solution.  Determination of the surface tension of an organic liquid and determination of % composition of an unknown mixture.	15	4
4	Preparation of Standard Solutions	Preparation of standard solution of $K_2Cr_2O_7$ . To find out the concentration of unknown $K_2Cr_2O_7$ solution using $Na_2S_2O_3$ solution as an intermediate. Preparation of standard solution of copper sulphate. To find out the concentration of unknown copper sulphate solution using $Na_2S_2O_3$ solution as an intermediate. Preparation of standard $KMnO_4$ and ferrous ammonium sulphate solution. To find out the strength of unknown ferrous ammonium sulphate solution using as an intermediate.	15	5

Effective from Se	Effective from Session: 2025-26										
Course Code	B020102P/CH134	Title of the Course	Quantitative Analysis	L	T	P	C				
Year	I	Semester	I	0	0	4	2				
Pre-Requisite	10+2 with Chemistry	Co-requisite	-								
Course	To impart essential knowledge of laboratory techniques and tests for estimating metal ions, estimating the concentrations of acids and alkalis in commercial products, and evaluating the portability of water samples.										
Objectives	concentrations of act	as and alkalis in comi	nercial products, and evaluating the portability of wat	er san	ipies.						

	Course Outcomes
CO1	Learners will have the knowledge and skills to <b>understand</b> the laboratory methods and tests related to the estimation of metal
COI	ions and the estimation of acids and alkali contents in commercial products.
CO2	Learners will be able to <b>understand</b> and perform the portability tests of water samples.
CO3	Learners will be able to <b>estimate</b> metal ions.
CO4	Learners will be able to <b>estimate</b> the alkali and acid contents of samples.
CO5	Learners will be able to <b>estimate</b> the inorganic salts and hydrated water in samples.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Estimation of one Anion and Cation	To analyse the given salt for one cation and anion.	15	1,2
2	Estimation of Metals Ions	To estimate ferrous and ferric by dichromate method. To estimate copper using thiosulphate.	15	2,3
3	Estimation of Acids and Alkali Contents	Determination of acetic acid in commercial vinegar using NaOH. Determination of alkali content – antacid tablet using HCl.  To estimate oxalic acid by titrating it with KMnO <sub>4</sub> .		2,4
4	Estimation of Inorganic Salts and Hydrated Water  To estimate sodium carbonate and sodium hydrogen carbonate present in a mixture. To estimate calcium content in chalk as calcium oxalate by permanganometry. To estimate water of crystallization in Mohr's salt by titrating with KMnO <sub>4</sub> .		15	2,5

Course Code	B000101V/CH137	Title of the Course	Plastic Waste Management L T P								
Year	I	Semester	I	1	0	2	3				
Pre-Requisite	10+2 with Chemistry Co-requisite -										
Course Objectives	preparation of standa qualitative and quanti	ard solutions and solu tative problems both in	owledge of laboratory operations, including operations of various concentrations, and to develop dependently and collaboratively, particularly in ragrochemicals, and household wastes.	their	abilit	y to s	solve				

	Course Outcomes									
CO1	Learners will be able to <b>analysis</b> of plastic and industrial wastes qualitatively, along with comprehension of the fundamentals of their treatment, would enable students to evaluate their physical parameters effectively.									
CO2	Learners will be able to <b>handle</b> and performance of sampling of plastic and industrial wastes following standard procedures would enable students to collect representative samples for analysis.									
CO3	Learners will be able to <b>understand</b> of the handling and disposal of radioactive waste, along with measurement of conductivity, would enable students to interpret its significance in waste analysis.									
CO4	Learners will be able to <b>conduct</b> electroanalytical procedures and performing potentiometric measurements would enable students to characterize wastes effectively.									
CO5	Learners will be able to <b>perform</b> recycling processes and sustainability practices would enable students to apply environmental management strategies efficiently.									

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Managerial Skill on Waste Treatment/Water Treatment	Theory: Introduction of plastic and its classification; waste focusing on metal deduction.  Practical: Qualitative Analysis	10	1,2
2	Supervisory and Technician Skill For Pharma/Chemical Industries	Theory: Sampling and handling of Industrial waste/ plastic waste. Practical: Sampling and digestion	10	1,2
3	Managerial (QA/QC) Skill for Cement/Plastic/Textile Industries /Waste Treatment Plant Industries	Theory: Principles of industrial waste treatment/ plastic waste treatment. Practical: Physical parameters of waste	10	1,2
4	Technician Skill/Radioactive Waste Handling Expertise for Nuclear Power Plant	Theory: Radioactive waste and its disposal, conductivity and its measurements.  Practical: Conductivity measurement of different samples	10	1,3
5	Technician Skill for Sugar, Cement, Pharma Steel/Iron Foundries	Theory: Potentiometric measurements, electro analytical methods. Practical: pH measurement & Electrochemical measurements	10	1,4
6	OC Managerial Skill for Cosmetic/Pharma/Steel/Polymer/ Textile/Food and Dairy Products	Theory: Sustainability and the chemical industry. Practical: Recycle of wastes	10	1,5

	To provide foundationa	l knowledge of advanced	d materials and their environmental applications, covering surface	chen	nistry,	catal	ysis,				
Course	material balances, and	material balances, and purification techniques. Students will evaluate the societal, economic, and ecological implications of these									
Objectives	technologies.										

	Course Outcomes
CO1	Learners will be able to understand the various materials and material balance calculations without and with chemical reactions would enable
COI	Learners will be able to understand the various materials and material balance calculations without and with chemical reactions would enable students to perform mass balance analysis in chemical processes.
CO <sub>2</sub>	Learners will be able to understand of surface chemistry and ceramics would enable students to explain their properties and industrial applications.
CO3	Learners will be able to know and analyse of water, steam, and air boilers used in chemical industries along with crystallization would enable
CO3	students to describe their working principles and applications.
CO4	Learners will be able to understand and evaluate the basic definitions and terms in X-ray powder diffraction and pharmaceuticals along with
CO4	distillation, evaporation, and absorption processes would enable students to explain their principles and industrial significance.
CO5	Learners will be able to understand and evaluate the basics and principles of filtration, extraction, and drying would enable students to apply these
CO5	Learners will be able to understand and evaluate the basics and principles of filtration, extraction, and drying would enable students to apply these techniques effectively in chemical and industrial operations.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Advanced Materials and Material Balance	Nanomaterials, superconductors, biomaterials and fullerenes. Material balance without chemical reactions: Flow diagram for material balance and material balance calculations for distillation, absorption, evaporation, extraction filtration, crystallization. Material balance involving chemical reactions: Concepts of stoichiometric equations, limiting reactant, excess reactant, percent excess, conversion, yield, selectivity and liquid phase reaction, gas phase reaction with or without recycle or bypass.	6	1
2	Surface Chemistry and Ceramics	Adsorption isotherm, sols, gels, emulsions, micro emulsions, micelles, aerosols, effect of surfactants. Introduction of ceramics, types, manufacturing processes and applications of ceramics.	8	2
3	Utilities in Chemical Industry	A brief idea about water, steam and air boilers used in chemical industries. A brief idea about fans, blowers, compressors and vacuum pumps, reciprocating pumps, gear pumps, centrifugal pumps, ejectors used in chemical industries.	8	3
4	Crystallization	Equilibrium solubility, super saturation, definition, nucleations, crystallization, equipment-tank crystallizer and circulating liquid evaporator crystallizer.	8	3
5	X-ray Powder Diffraction	Introduction, different solid forms and their role in drug development, salts, solvates, co-crystals, characterization of amorphous materials.	8	4
6	Distillation, Evaporation and Absorption	Batch and continuous distillation, azeotropic and extractive distillation. Evaporator equipments; short tube evaporator and forced circulation evaporators. Equipments: Tray (Plate) towers for absorption, packed towers for absorption.	8	4
7	Filtration and Extraction	Filter media and filter aids, filtration equipment- bed filters, plate and frame press filters, rotary drum filter and centrifuges. Extraction equipments: spray column and packed column extraction, rotating disc column extractors, liquid-liquid extraction, acid-base extraction.	8	5
8	Drying	Purpose of drying, equipment- tray dryer, rotary dryer, flask dryer, fluid bed dryer, drum dryer, spray dryer.	6	5

	Course Outcomes
CO1	Learners will be able to generate correct names, identify isomeric relationships, and distinguish between organic and inorganic compounds.
CO2	Learners will be able to purification techniques and organic compounds, students will apply suitable separation methods and evaluate the preparation, properties, and applications of key aldehydes, ketones, acids, esters, ethers, amines, and alkynes.
CO3	Learners will be able to key aromatic and pharmaceutical compounds, students will assess preparation, properties, and major therapeutic uses.
CO4	Learners will be able to herbal and microbial products, students will identify herbal materials, explain processing methods, and describe enzyme production and industrial applications.
CO5	Learners will be able to the principles of pharmaceutical documentation, students will explain key records and quality systems essential for regulatory compliance and product quality.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO	
1	Basic concepts of Organic chemistry	Introduction; Classification of organic compounds; Differentiate organic & inorganic compounds; functional group & homologous series; IUPAC system of nomenclature and Isomerism.	8	1	
2	Purification of Organic Compounds	Simple crystallization, fractional crystallization, sublimation, simple distillation, fractional distillation, distillation under reduced pressure, steam distillation, azeotropic distillation.	7	2	
3	Study of Aliphatic Compounds	Preparation, Properties & Uses: Formaldehyde & Acetaldehyde; Acetone & Ethanol; Acetic Acid & Oxalic Acid; Ethyl Acetate & Diethylether; Ethyl Amine, Acetylene	8	2	
4	Study of Aromatic Compounds	Preparation, Properties & Uses of the following Aromatic compounds: Benzene, Toluene & Xylene; Nitrobenzene & Aniline; Phenol & Benzaldehyde and Benzoic Acid & Salicylic Acid.	8	3	
5	Medicinal Chemistry	Evaluation and study of introduction, examples and uses of various antibiotics, antipyretics and analgesics, antimalarial and cardiovascular drugs.	7	3	
6	Herbal Drug Technology	Definition of herbs, herbal medicine, herbal medicinal product, herbal drug preparation.			
7	Industrial Microbial Enzymology	Use of microbes in industry. Production of Enzymes- General consideration Amylase, Catalase, Peroxidase, Lipase, Protease, Penicillinase.	7	4	
8	Document maintenance in pharmaceutical industry	Batch Formula Record, Master Formula Record, SOP, Quality audit, Quality Review and Quality documentation, Reports and documents, distribution records.	7	5

Course	To introduce studen	To introduce students to the fundamental qualitative and quantitative experimental understanding of biomolecules,										
Objectives	including simple drug	g creation and molecu	les made of carbohydrates, proteins, amino acids, and	nucle	ic acid	s.						

	Course Outcomes
	Learners will be able to development of qualitative and quantitative experimental skills for the analysis of biomolecules such as carbohydrates, proteins, amino acids, and nucleic acids would enable students to analyze their structural and chemical properties effectively.
	Learners will be able to perform qualitative and quantitative analysis of carbohydrates would enable students to determine their composition and reactivity systematically.
	Learners will be able to perform of qualitative and quantitative analysis of proteins, amino acids, and fats would enable students to evaluate their structural features and chemical behaviour.
	Learners will be able to determine an identification of nucleic acids and their constituent components would enable students to understand their biological significance and chemical structure.
CO5	Learners will be able to perform synthesis of simple drug molecules would enable students to apply basic organic synthesis techniques in pharmaceutical chemistry.

Unit	Title of the Unit							
No.			Hrs.					
1	Qualitative and Quantitative Analysis of Carbohydrates	Separation of a mixture of two sugars by ascending paper chromatography Application of TLC and PC for the identification of natural coloring materials such as Lycopene from Tomato and Chlorophyll from Spinach Differentiate between a reducing/ non reducing sugar Synthesis of Osazones.	15	1,2				
2	Qualitative and Quantitative Analysis of Proteins, Amino Acids and Fats	Isolation of protein.  Determination of protein by the Biuret reaction.  TLC separation of a mixture containing 2/3 amino acids  Paper chromatographic separation of a mixture containing 2/3 amino acids 5.  Action of salivary amylase on starch  To determine the concentration of glycine solution by formylation method.  To determine the saponification value of an oil/fat.  To determine the iodine value of an oil/fat	15	1,3				
3	Determination and Identification of Nucleic Acids	Determination of nucleic acids Extraction of DNA from onion/cauliflower	15	1,4				
4		To synthesize aspirin by acetylation of salicylic acid and compare it with the ingredient of an aspirin tablet by TLC. Synthesis of barbituric acid Synthesis of propranolol	15	1,5

	To impart the fundan	nental understanding	of laboratory safety, managerial abilities for wa	ste re	eductio	n, a	basic				
Course	understanding of chemistry, laboratory equipment, reagents, and solutions, as well as expertise in using high-tech										
Objectives	equipment for any phar	ma/chemical company	y/testing lab, etc.								

	Course Outcomes
CO1	Learners will be able to understand an adherence to safety procedures and protocols in a science laboratory would enable students to perform experiments safely and confidently.
CO2	Learners will be able to understand the application of waste management skills in laboratory practices would enable students to handle and dispose of chemical wastes effectively.
CO3	Learners will be able to demonstrate elementary knowledge of chemistry concepts would enable students to explain fundamental principles in theoretical and practical contexts.
CO4	Learners will be familiar with laboratory instruments, reagents, and solutions, along with working confidently in a chemistry laboratory, would enable students to perform experiments efficiently.
CO5	Learners will be able to handle of sophisticated instruments used in pharmaceutical industries, chemical companies, and testing laboratories would enable students to operate analytical equipment with competence.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO	
1	Safety In Science Laboratory	Theory: General Safety; Safe Handling of Chemicals and Glass wares; Working in Chemo-Safety/Bio-Safety areas.  Practical: Quantitative analysis; Determination of physical parameters of wastewater and solid waste. Temperature, Colour, Odour, pH, etc.	10	1	
2	Managerial Skill in Minimizing Wastes	Theory: Four "Rs"- Reuse, Rework, Reduce, Recycle.  Practical: Handling of different kinds of wastes and reuse. BOD, COD, & DO measurement.	10	1,2	
3	Elementary Knowledge of Chemistry	chemistry, Elementary knowledge physical chemistry.			
4	Laboratory Instruments	Theory: Principle and working of basic laboratory instruments Autoclave, Hot air oven, Incubator, pH meter, water bath, centrifuge, Refrigerator, colorimeter, Balance, Flame photometer, Microscope, Electrophoresis etc.  Practical: Wastewater analysis and its treatment including primary, secondary, and tertiary treatment.	10	1,4	
5	Reagents and Solutions	Theory: Molar solutions, normal solutions; Buffer solutions, solutions, saturated solutions, standard solutions. Dilution of the concentrated solution to desired concentration. Practical: Soil Sampling and its digestion; Physico-chemical characteristics of soil.	10	1,4	
6	Handling Sophisticated Instruments	Expertise in Handling Sophisticated Instruments for Any Pharma/Chemical Companies/ Testing Labs etc.: Theory: Sustainability and the Chemical Industry; Chromatography and separation Techniques.  Practical: TLC and Paper chromatographic techniques	10	1,5

Effective from So	Effective from Session: 2025-2026								
Course Code	B020205T/CH159	Title of the Course	Advanced Application of Artificial Intelligence in Chemical Sciences	L	T	P	C		
Year	I	Semester II 3 1 0							
Pre-Requisite	10+2	Co-requisite	-						
Course	To explain the students	explain the students with the origin of artificial intelligence, its evolution, scope, and significance. The idea is to know							
Objectives	about the probable appl	out the probable applications of AI in chemical sciences and how they can be implemented in reaction designing, synthesis,							
	molecular prediction, rea	ction outcome prediction	on, template selection, molecular designing, and property pre	diction	1.				

	Course Outcomes
CO1	Learners will be able to acquire knowledge of the history, evolution, scope, and significance of Artificial Intelligence would enable students to describe its fundamental concepts and development.
CO2	Learners will be able to apply problem-solving techniques using Artificial Intelligence which would enable students to solve complex tasks efficiently.
CO3	Learners will be able to analysis and evaluate different types of neural networks and deep learning approaches, including supervised and unsupervised learning, feature selection and engineering, and learning from observation, would enable students to select appropriate AI models for specific problems.
CO4	Learners will be able to understand an application of machine learning and data analysis techniques in chemistry, including database utilization and deep learning applications, would enable students to interpret chemical data effectively.
CO5	Learners will be able to design and implement AI applications in chemical synthesis, molecular prediction, prediction of reaction outcomes, designing of new reactions, reactant and template selection, molecular designing, and property prediction would enable students to innovate in chemical research and development.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction to artificial intelligence and problem solving through AI	Introduction: History and evolution of AI, comparison of human and computer skill, Component of AI, Scope and significance in different domains, Ethical considerations in AI development and deployment, Intelligent Agent, logical agent.  Problem solving through AI: Defining problem as a state space search, analyzing the problem, solving problem by searching, informed search and Uninformed Search.	7	1, 2
2	Machine Learning Basics and Natural Language Processing	Machine Learning: Neural networks and deep learning, Supervised and unsupervised learning, feature selection and engineering, learning from observation, knowledge in learning.  Natural Language Processing: Brief history of NLP, Text processing, Sentiment analysis, language translation, Early NLP system, ELIZA system, LUNAR system, General NLP system.	8	2,3
3	AI in Chemistry	Concept of Artificial intelligence, machine learning, Machine learning applications to data analysis in chemistry, databases, deep learning in chemistry, cheminformatics, molecular dynamics and simulation, chemical representation of atoms and molecules with molecular graph representation and Simplified Molecular Input Line Entry System (SMILES)	7	4
4	Applications of AI in Synthetic and Medicinal Chemistry and ethical issues:	Artificial intelligence in synthesis, molecular prediction, prediction of reaction outcomes and designing of new reactions, reactant and template selection, molecular designing and property prediction, computer-assisted synthesis design and prediction of biochemical pathways and new drug targets. Regulatory science, ethical consideration related to use of AI in chemical sciences	8	5

Effective from Session	Effective from Session: 2025-2026								
Course Code	B030202T/MT148	Title of the Course	Basic Mathematics & Statistic	L	Т	P	C		
Year	I	Semester         II         3         1         0         4							
Pre-Requisite		Co-requisite Co-requisite							
Course Objectives	quantitative relations		ementary mathematics. By using the principal of applied ant for higher studies. After successfully completion of mensions						

	Course Outcomes
CO1	Learners will be able to interpret limits and continuity of functions. Also, they can find differential coefficient, differentiation of functions including function of a function, differentiation of parametric form, simple and successive differentiation.
CO2	Learners will evaluate and interpret integration as an inverse of differentiation; They will be able to find indefinite integrals of standard form, integration by parts, by substitution and by partial fraction method. They can evaluate definite integrals.
CO3	Learnerscan describe the basic concepts of simple random sampling and stratified random sampling. They can understand and find measures of central tendency (mean, median and mode), measures of variation (mean deviation and standard deviation), measure of coefficient if variation. Student will be able to understand and evaluate covariance and correlations, Karl Pearson's Coefficient of correlation and Spearman's coefficient of rank correlation. They can also be able to find regression by method of least squares.
CO4	Learners can interpret the fundamental principle of counting. They will also be able to find permutations, permutations under certain conditions, combinatorial identities. They can also apply Binomial theorem (without proof)
CO5	Learners will be able to understand the random experiment and associated sample space, events. They can also find probability and can use addition and multiplication theorems for finding probability (without proof). They will be able to understand probability distributions, and will be able to find Binomial, Poisson, and Normal distributions.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Limit and Continuity	Set and functions, left hand limit and right-hand limit, limits of function, continuity of function.	7	1
2	Differentiabilit y	Definition of differential coefficient, differentiation of function including function of a function, differentiation of parametric form, simple and successive differentiation, Leibnitz rule.	8	1
3	Integrations	Integration as inverse of differentiation, indefinite integrals of standard form, integration by parts, substitution method and partial fraction method, evaluation of definite integrals.	8	2
4	Univariate Statistics	Basic concepts of simple random sampling and stratified random sampling, measures of central tendency (mean, median and mode), measures of variation (mean deviation, quartile deviation and standard deviation), coefficient of variation.	7	3
5	Bivariate Statistics	Covariance, correlations, scatter diagram, Karl Pearson's coefficient of correlation, Spearman's coefficient of rank correlation, regression and its coefficient, estimation of regression lines by the method of least square.	7	3
6	Permutations and Combinations	Fundamental principle of counting, permutations, permutations under certain conditions, combinations, combinatorial identities, Binomial theorem (without proof), some applications of Binomial theorem.	7	4
7	Probability theory	Random experiment and associated sample space, events, definition of probability, algebra of events, addition and multiplication theorems on probability (without proof), conditional probability, Baye's theorem.	8	5
8	Probability Distributions	Probability distribution, probability mass function, probability distribution function, expectations, Binomial, Poisson, normal distributions and their mean and variance, fitting the expected frequency of Binomial and Poisson distributions.	8	5
