<b>Effective from Ses</b>	Effective from Session: 2025-26									
Course Code	Fundamentals of Chemistry-I	L	T	P	C					
Year	I	Semester	I	5	1	0	4			
Pre-Requisite	10+2 with Chemistry	Co-requisite	-							
Course Objectives	enabling students to	predict elemental prop	cal bonding and periodic properties and trends act erties based on their position in periods and gro nistry, organic reaction mechanisms, and other fur	ups, a	nd to	develo	ра			

	Course Outcomes
CO1	Learners will be able to <b>explain</b> molecular polarity and weak chemical forces such as van der Waals forces, ion-dipole forces, dipole-dipole interactions, and induced dipole interactions, and <b>apply</b> current bonding models to predict the structures and bonding parameters of simple inorganic and organic molecules.
CO2	Learners will be able to <b>analyze</b> the periodic table as a tool for predicting elemental properties and <b>demonstrate</b> detailed insights into periodic trends.
CO3	Learners will be able to <b>evaluate</b> the fundamentals of chemical reactions, including reactive intermediates, transition states, and factors influencing bond formation, and <b>interpret</b> reactors, catalysts, stereochemistry, and the formation of major and minor products in organic reactions.
CO4	Learners will be able to <b>explain</b> stereochemistry, including two-dimensional and three-dimensional structures of molecules, and <b>analyze</b> their roles in reaction mechanisms.
CO5	Learners will be able to <b>describe</b> solutions and colligative properties, including Raoult's law, relative lowering of vapour pressure, molecular weight determination, and osmosis, and <b>apply</b> these principles in relevant contexts.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Molecular polarity	van der Waals forces, ion-dipole forces, dipole dipole interactions, induced dipole interaction, dipole moment and molecular Structure (Diatomic and polyatomic molecules), Percentage ionic character from dipole moment, polarizing power and polarizability. Fajan's rules and consequences of polarization.	8	1
2	General Periodic Properties	Electronic configurations of elements, types of radii (covalent, crystal and Vander Waal's radii), electron affinity, electronegativity, and ionization potential. Pauling scale, Mulliken electronegativity scale, Slater rules, Allred and Rochow scale, diagonal relationship.	8	2
3	Periodic properties of Atoms (with reference to s & p- block)	Brief discussion, factors affecting and variation trends of following properties in groups and periods (with reference to s & p-block) such as effective nuclear charge, shielding or screening effect, Atomic and ionic radii, Electronegativity, Ionization enthalpy, Electron gain enthalpy.	8	2
4	Mechanism of Organic Reactions	Curved arrow notation, drawing electron movements with allows, half-headed and double-headed arrows, homolytic and heterolytic bond fission, Types of reagents electrophiles and nucleophiles.	6	3
5	Essentials of Isomerism	Concept of isomerism, Different types of isomerism, their nomenclature and associated physico chemical properties. Structural isomerism: chain isomerism, positional isomerism, functional isomerism and metamerism, keto-enol tautomerism.	6	3
6	Stereochemistry-I	Optical isomerism: elements of symmetry, molecular chirality, enantiomers, stereogenic center, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centers, disasteromers, threo and erythro diastereomers, meso compounds, resolution of enantionmer, inversion, retention and recemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature.	8	4
7	Stereochemistry-II	Geometric isomerism: determination of configuration of geometric isomers, E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds.  Conformational isomerism: conformational analysis of ethane and n-butane; conformations of cyclohexane, axial and equatorial bonds, conformation of mono substituted cyclohexane derivatives, Newman projection and Sawhorse formulae, Fischer and flying wedge formulae, Difference between configuration and conformation.	8	4
8	Solutions and Colligative Properties	Dilute Solutions, Colligative Properties, Raoult's law, relative lowering of vapour pressure, molecular weight determination. Osmosis - laws of osmotic pressure, its measurement, determination of molecular weight from osmotic pressure. Elevation of boiling point and depression of freezing point. Derivation of relation between molecular weight and elevation in boiling point and depression in freezing point.	8	5

<b>Effective from Sessi</b>	Effective from Session: 2025-26										
Course Code	B020103T/CH152	Fundamentals of Chemistry-II	L	T	P	C					
Year	I	Semester	I	5	1	0	4				
Pre-Requisite	10+2 with Chemistry	Co-requisite	-								
Course Objectives	of chemical calculation thermodynamics, chem a thorough understandi in the prediction of che	ss, weak chemical forces ical equilibrium, and aci- ng of chemical forces, n	ge on the origin of chemistry, ancient Indians, classical and contemporary atomic structureds, and bases. Upon completion of this cours nolecular polarity, periodic properties, and trand modern atomic structure theories, as we cids and bases.	re the e, stud ends	ories, a dents w which	as well ould g will as	l as gain ssist				

	Course Outcomes
CO1	Learners will be able to <b>explain</b> the origins of chemistry, including ancient Indian chemistry, perform fundamental chemical calculations, and <b>describe</b> weak chemical forces.
CO2	Learners will be able to <b>understand and apply</b> the concepts of matter waves, the de Broglie equation, Heisenberg's uncertainty principle, atomic orbitals, Schrödinger's wave equation and its significance (Ψ and Ψ²), quantum numbers, radial and angular wave functions, probability distribution curves, shapes of s, p, and d orbitals, and interpret Aufbau principle, Pauli exclusion principle, Hund's rule, electronic configurations, and effective nuclear charge.
CO3	Learners will be able to <b>explain</b> the fundamentals of valence bond theory, valence shell electron pair repulsion (VSEPR) theory, molecular orbital theory for homonuclear and heteronuclear diatomic molecules (e.g., CO, NO), multicenter bonding in electron-deficient molecules, and <b>evaluate</b> bond strength and bond energy.
CO4	Learners will be able to <b>analyze</b> ionic structures using the radius ratio rule and coordination numbers, <b>evaluate</b> its limitations, describe lattice defects, semiconductors, lattice energy and the Born-Haber cycle, solvation energy, and solubility of ionic solids, and apply Fajan's rules to predict polarizing power and polarizability of ions.
CO5	Learners will be able to <b>explain</b> different concepts of acids and bases, theories of indicators (acid-base, redox, metal ion, adsorption), select appropriate indicators, and <b>evaluate</b> types of systems, intensive and extensive properties, thermodynamic processes, and the laws of thermodynamics.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	The beginning of chemistry	The history of chemistry, quantitative experiments by Lavoisier, Proust, and Dalton, the law of conservation of mass, and the law of multiple proportions. Avogadro's hypothesis. Introduction of ancient Indian chemistry, contribution of Indian chemists in context to the holistic development of modern science and technology.	8	1
2	Fundamentals of Chemical Calculations and Weak Chemical Forces	Atomic weight, molecular weight, equivalent weight, mole concept, percentage yield, composition of liquid mixtures and gaseous mixtures, molarity, molarity, morality, normality. Hydrogen bonding, van der Waals forces, ion-dipole forces, dipole-dipole interactions, induced dipole interaction.	8	1
3	Structure and Bonding	Idea of de-Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrödinger wave equation, significance of $\Psi$ and $\Psi^2$ , quantum numbers, radial and angular wave functions and probability distribution curves, shapes of s, p, d, orbitals, Aufbau and Pauli exclusion principles, Hund's multiplicity rule, electronic configurations of the elements, effective nuclear charge.	8	2
4	Chemical Bonding-I	Covalent Bond: Valence bond theory and its limitations, directional characteristics of covalent bond, various types of hybridization and shapes of simple inorganic molecules and ions, valence shall electron pair repulsion (VSEPR) theory to NH <sub>3</sub> , H <sub>3</sub> O <sup>+</sup> , SF <sub>4</sub> , CIF <sub>3</sub> , ICl <sup>-2</sup> and H <sub>2</sub> O, MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenter bonding in electron deficient molecules, bond strength and bond energy, Percentage ionic character from dipole moment and electro-negativity difference.	6	3
5	Chemical Bonding-II	Ionic Solids: Ionic structures, radius ratio effect and coordination number, limitation of radius ratio rule, lattice defects, semiconductors, lattice energy and Born-Haber cycle, salvation energy and solubility of ionic solids, polarizing power and Ploarizability of ions, Fajan's rule, Metallic bond-free electron, valence bond and band theories.	8	3
6	Recapitulation of Basics of Organic Chemistry	Bond lengths and bond angles, bond energy, localized and delocalized chemical bonding, Van der Waals interactions, inclusion compounds, Clatherates, Charge transfer complexes, hyperconjugation, Dipole moment; Electronic Displacements: Inductive, electromeric, resonance mesomeric effects and their applications. Types of organic reactions, Energy considerations. Reactive intermediates – Carbocations, carbanions, free radicals, carbenes, arynes and nitrenes (with examples).	8	4
7	Acids and Bases	Lowery - Bronsted concept, Lewis's concept, hard and soft acids and bases, Lux- Flood acids and bases, theories of indicators, acid-base, redox, metal ion	6	4

		and adsorption indicators and choice of indicators.		
8	Thermodynamics and Chemical Equilibrium	System, surroundings etc. Types of systems, intensive and extensive properties, State and path functions and their differentials, Thermodynamic processes, concept of heat and work. Thermodynamic laws, enthalpy changes, entropy, processes and functions, free energy, partial molar quantities, activity co-efficient, and fugacity, effect of temperature and pressure on equilibrium constants in gaseous system.	8	5

Course Code	B190102P/CH133	Title of the Course	Basic Analytical Methods	L	T	P	C			
Year	I	Semester	I	0	0	4	2			
Pre-Requisite	10+2 with Chemistry	Co-requisite	-							
Course Objectives	To provide the key solutions, solutions laboratory techniques	of various concentrat	d laboratory practice (GLP), calibration apparatus, prions, determination of viscosity, the surface tension	orepara of liq	ation o uids, a	of stan and sin	dard nple			

	Course Outcomes
CO1	Learners will be able to <b>understand</b> and perform good laboratory practice (GLP).
CO2	Learners will be able to <b>understand</b> the basic analytical and technical skills needed to work effectively in the various fields of chemistry.
CO3	Learners will be able to <b>remember</b> to keep records of all experiments performed in the manner that is required in laboratories.
CO4	Learners will be able to <b>determine</b> the viscosity and surface tension of liquids.
CO5	Learners will be able to <b>prepare</b> standard solutions and solutions of various concentrations.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Good Laboratory Practices (GLP)	Good laboratory practices, Calibration of thermometer and burette	15	1,2,3
2	Simple Laboratory Techniques	Crystallization, fractional crystallization, distillation, fractional distillation, melting point and boiling point determination.	15	2,3
3	Viscosity an d Surface Tension of Liquids	Determination of relative viscosity of a liquid with water and determination of % composition of an unknown solution.  Determination of the surface tension of an organic liquid and determination of % composition of an unknown mixture.	15	4
4	Preparation of Standard Solutions	Preparation of standard solution of K2Cr2O7. To find out the concentration of unknown K2Cr2O7 solution using Na2S2O3 solution as an intermediate.  Preparation of standard solution of copper sulphate. To find out the concentration of unknown copper sulphate solution using Na2S2O3 solution as an intermediate.  Preparation of standard KMnO4 and ferrous ammonium sulphate solution. To find out the strength of unknown ferrous ammonium sulphate solution using as an intermediate.	15	5

Course Code	B000101V/CH137	Title of the Course	Plastic Waste Management L T								
Year	I	Semester	I	1	0	2	3				
Pre-Requisite	10+2 with Chemistry	Co-requisite	-								
Course Objectives	preparation of standa qualitative and quanti	ard solutions and solu tative problems both in	owledge of laboratory operations, including operations of various concentrations, and to develop dependently and collaboratively, particularly in ragrochemicals, and household wastes.	their	abilit	y to s	solve				

	Course Outcomes									
CO1	Learners will be able to <b>analysis</b> of plastic and industrial wastes qualitatively, along with comprehension of the fundamentals of their treatment, would enable students to evaluate their physical parameters effectively.									
CO2	Learners will be able to <b>handle</b> and performance of sampling of plastic and industrial wastes following standard procedures would enable students to collect representative samples for analysis.									
CO3	Learners will be able to <b>understand</b> of the handling and disposal of radioactive waste, along with measurement of conductivity, would enable students to interpret its significance in waste analysis.									
CO4	Learners will be able to <b>conduct</b> electroanalytical procedures and performing potentiometric measurements would enable students to characterize wastes effectively.									
CO5	Learners will be able to <b>perform</b> recycling processes and sustainability practices would enable students to apply environmental management strategies efficiently.									

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Managerial Skill on Waste Treatment/Water Treatment	Theory: Introduction of plastic and its classification; waste focusing on metal deduction.  Practical: Qualitative Analysis	10	1,2
2	Supervisory and Technician Skill For Pharma/Chemical Industries	Theory: Sampling and handling of Industrial waste/ plastic waste. Practical: Sampling and digestion	10	1,2
3	Managerial (QA/QC) Skill for Cement/Plastic/Textile Industries /Waste Treatment Plant Industries	Theory: Principles of industrial waste treatment/ plastic waste treatment. Practical: Physical parameters of waste	10	1,2
4	Technician Skill/Radioactive Waste Handling Expertise for Nuclear Power Plant	Theory: Radioactive waste and its disposal, conductivity and its measurements.  Practical: Conductivity measurement of different samples	10	1,3
5	Technician Skill for Sugar, Cement, Pharma Steel/Iron Foundries	Theory: Potentiometric measurements, electro analytical methods. Practical: pH measurement & Electrochemical measurements	10	1,4
6	OC Managerial Skill for Cosmetic/Pharma/Steel/Polymer/ Textile/Food and Dairy Products	Theory: Sustainability and the chemical industry. Practical: Recycle of wastes	10	1,5

Effective from S	Session: 2025-26	ssion: 2025-26									
Course Code	Course Code B020101T/CH139 Title of the Course		Bioorganic and Materials Chemistry	L	Т	P	C				
Year	I	Semester         II         5         1         0         4									
Pre-Requisite	10+2 with Chemistry Co-requisite -										
Course Objectives	nucleic acids, and med	To provide the students with a basic theoretical and experimental understanding of carbohydrates, amino acids, proteins, nucleic acids, and medicinal chemistry along with the solid state, basic chemical calculation, units and dimensions, material balance, energy balance, and the basics of medicinal chemistry.									

	Course Outcomes
CO1	Learners will be able to <b>understand</b> the significance of biomolecules in the functioning of living organisms and explain the chemistry of carbohydrates.
CO2	Learners will be able to <b>explain</b> the physiological functions that regulate human growth and development and demonstrate understanding of the chemistry of proteins and nucleic acids.
CO3	Learners will be able to <b>understand</b> the fundamentals of solid-state chemistry, including space lattice, unit cells, laws of crystallography, and X-ray diffraction by crystals.
CO4	Learners will be able to <b>understand and apply</b> basic chemical calculations, including the concepts of atoms, moles, mole fractions, and methods of expressing composition; demonstrate knowledge of units, dimensions, and conversions; and perform material balance calculations for processes with and without chemical reactions, including multiple unit operations, recycle, and bypass systems.
CO5	Learners will be able to <b>understand</b> the forms of energy and perform energy balance calculations, including evaluating energy changes in physical processes and chemical reactions for various industrial and laboratory applications.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mappe d CO		
1	Chemistry of Carbohydrates-I	Classification of carbohydrates, reducing and non-reducing sugars, General Properties of Glucose and Fructose, their open chain structure. Epimers, mutarotation and anomers. Mechanism of mutarotation Determination of configuration of Glucose (Fischer's proof). Cyclic structure of glucose. Haworth projections. Cyclic structure of fructose. Inter conversions of sugars (ascending and descending of sugar series, conversion of aldoses to ketoses).	8	1		
2	Chemistry of Carbohydrates-II	Lobry de Bruyn-van Ekenstein rearrangement; stepping-up (Kiliani Fischer method) and stepping-down (Ruff's &Wohl's methods) of aldoses; end-group interchange of aldoses Linkage between monosachharides, structure of disacharrides (sucrose, maltose, lactose.)	8	1		
3	Chemistry of Proteins	Classification of amino acids, zwitter ion structure and isoelectric point. Overview of primary, secondary, tertiary and quaternary structure of proteins. Determination of primary structure of peptides, determination of N-terminal amino acid (by DNFB and Edman method) and C- terminal amino acid (by thiohydantoin and with carboxypeptidase enzyme). Synthesis of simple peptides (upto dipeptides) by N-protection & C-activating groups and Merrifield solid phase synthesis. Protein denaturation/renaturation. Mechanism of enzyme action, factors affecting enzyme action, Coenzymes and cofactors and their role in biological reactions).	8	2		
4	Chemistry of Nucleic Acids	Constituents of Nucleic acids: Adenine, guanine, thymine and Cytosine (Structure only), Nucleosides and nucleotides (nomenclature), Synthesis of nucleic acids, Structure of polynucleotides; Structure of DNA (Watson-Crick model) and RNA (types of RNA), Genetic Code, Biological roles of DNA and RNA: Replication, Transcription and Translation	8	2		
5	Solid State	Definition of space lattice, unit cell. Laws of crystallography – (i) Law of constancy of interfacial angles, (ii) Law of rationality of indices and iii) Symmetry elements in crystals and law of symmetry  X-ray diffraction by crystals. Derivation of Bragg equation. Determination of crystal structure of NaCl, KCl and CsCl (powder method).	8	3		
6	Basic Chemical Calculation, Units and Dimensions	Basic Chemical Calculation, Units  Introduction, Concept of atom, Mole and mole fraction, Methods of expressing the composition of mixtures (mass percent, volume percent), equivalent weight, promotion of mixtures (mass percent, volume percent), equivalent weight, promotion of the composition of mixtures (mass percent, volume percent), equivalent weight, promotion of the composition of mixtures (mass percent, volume percent), equivalent weight, promotion of the composition of mixtures (mass percent, volume percent), equivalent weight, promotion of the composition of mixtures (mass percent, volume percent), equivalent weight, promotion of the composition of mixtures (mass percent, volume percent).		4		
7	Material Balance	Process elassification Choice of system and basis of molecular processes with chemical				
8	Energy Balance	Energy balance: Forms of energy, Energy balance, Energy changes in physical processes, Energy changes in reactions, Energy balance Calculations.	6	5

Pre-Requisite	10+2 with Chemistry	Chemistry Co-requisite -								
Course Objectives	aliphatic and aromatic	chemistry, and their phar product synthesis. The co	ding, nomenclature, structure, and reactivity. It include maceutical relevance. Emphasis is placed on herbal drourse concludes with industry-focused skills in pharm	ug tech	nology	, micro	bial			

	Course Outcomes
CO1	Learners will be able to generate correct names, identify isomeric relationships, and distinguish between organic and inorganic compounds.
CO2	Learners will be able to purification techniques and organic compounds, students will apply suitable separation methods and evaluate the preparation, properties, and applications of key aldehydes, ketones, acids, esters, ethers, amines, and alkynes.
CO3	Learners will be able to key aromatic and pharmaceutical compounds, students will assess preparation, properties, and major therapeutic uses.
CO4	Learners will be able to herbal and microbial products, students will identify herbal materials, explain processing methods, and describe enzyme production and industrial applications.
CO5	Learners will be able to the principles of pharmaceutical documentation, students will explain key records and quality systems essential for regulatory compliance and product quality.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO		
1	Basic concepts of Organic chemistry	Introduction; Classification of organic compounds; Differentiate organic & inorganic compounds; functional group & homologous series; IUPAC system of nomenclature and Isomerism.	8	1		
2	Purification of Organic Compounds	Simple crystallization, fractional crystallization, sublimation, simple distillation, fractional distillation, distillation under reduced pressure, steam distillation, azeotropic distillation.	7	2		
3	Study of Aliphatic Compounds	Preparation, Properties & Uses: Formaldehyde & Acetaldehyde; Acetone & Ethanol; Acetic Acid & Oxalic Acid; Ethyl Acetate & Diethylether; Ethyl Amine, Acetylene	8	2		
4	Study of Aromatic Compounds	Preparation, Properties & Uses of the following Aromatic compounds: Benzene, Toluene & Xylene; Nitrobenzene & Aniline; Phenol & Benzaldehyde and Benzoic Acid & Salicylic Acid.	8	3		
5	Medicinal Chemistry	Medicinal Chemistry  Evaluation and study of introduction, examples and uses of various antibiotics, antipyretics and analgesics, antimalarial and cardiovascular drugs.				
6	Herbal Drug Technology	Definition of herbs, herbal medicine, herbal medicinal product, herbal drug preparation.		4		
7	Industrial Microbial Enzymology	7	4			
8	Document maintenance in pharmaceutical industry	7	5

Objectives	equipment for any phar	ma/chemical company	//testing lab, etc.							

	Course Outcomes
CO1	Learners will be able to understand an adherence to safety procedures and protocols in a science laboratory would enable students to perform experiments safely and confidently.
CO2	Learners will be able to understand the application of waste management skills in laboratory practices would enable students to handle and dispose of chemical wastes effectively.
CO3	Learners will be able to demonstrate elementary knowledge of chemistry concepts would enable students to explain fundamental principles in theoretical and practical contexts.
CO4	Learners will be familiar with laboratory instruments, reagents, and solutions, along with working confidently in a chemistry laboratory, would enable students to perform experiments efficiently.
CO5	Learners will be able to handle of sophisticated instruments used in pharmaceutical industries, chemical companies, and testing laboratories would enable students to operate analytical equipment with competence.

Unit No.	Title of the Unit	Title of the Unit Content of Unit				
1	Safety In Science Laboratory	Theory: General Safety; Safe Handling of Chemicals and Glass wares; Working in Chemo-Safety/Bio-Safety areas.  Practical: Quantitative analysis; Determination of physical parameters of wastewater and solid waste. Temperature, Colour, Odour, pH, etc.	10	1		
2	Managerial Skill in Minimizing Wastes in Minimizing		10	1,2		
3	Elementary Knowledge of Chemistry	chemistry, Elementary knowledge physical chemistry.		3		
4	Laboratory Instruments	Theory: Principle and working of basic laboratory instruments Autoclave, Hot air oven, Incubator, pH meter, water bath, centrifuge, Refrigerator, colorimeter, Balance, Flame photometer, Microscope, Electrophoresis etc.  Practical: Wastewater analysis and its treatment including primary, secondary, and tertiary treatment.	10	1,4		
5	Reagents and Solutions	Theory: Molar solutions, normal solutions; Buffer solutions, solutions, saturated solutions, standard solutions. Dilution of the concentrated solution to desired concentration. Practical: Soil Sampling and its digestion; Physico-chemical characteristics of soil.	10	1,4		
6	Handling Sophisticated Instruments	Expertise in Handling Sophisticated Instruments for Any Pharma/Chemical Companies/ Testing Labs etc.: Theory: Sustainability and the Chemical Industry; Chromatography and separation Techniques.  Practical: TLC and Paper chromatographic techniques	10	1,5

Course Code	B020205T/CH159	Title of the Course	Advanced Application of Artificial Intelligence in Chemical Sciences	L	T	P	C				
Year	I	Semester	II	3	1	0	4				
Pre-Requisite	10+2	10+2 Co-requisite -									
Course	To explain the students	with the origin of an	rtificial intelligence, its evolution, scope, and significance	e. The	idea is	to kno	ow				
Objectives	about the probable appl	about the probable applications of AI in chemical sciences and how they can be implemented in reaction designing, synthesis,									
	molecular prediction, rea	ction outcome prediction	on, template selection, molecular designing, and property pre	diction	1.						

	Course Outcomes
CO1	Learners will be able to acquire knowledge of the history, evolution, scope, and significance of Artificial Intelligence would enable students to describe its fundamental concepts and development.
CO2	Learners will be able to apply problem-solving techniques using Artificial Intelligence which would enable students to solve complex tasks efficiently.
CO3	Learners will be able to analysis and evaluate different types of neural networks and deep learning approaches, including supervised and unsupervised learning, feature selection and engineering, and learning from observation, would enable students to select appropriate AI models for specific problems.
CO4	Learners will be able to understand an application of machine learning and data analysis techniques in chemistry, including database utilization and deep learning applications, would enable students to interpret chemical data effectively.
CO5	Learners will be able to design and implement AI applications in chemical synthesis, molecular prediction, prediction of reaction outcomes, designing of new reactions, reactant and template selection, molecular designing, and property prediction would enable students to innovate in chemical research and development.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction to artificial intelligence and problem solving through AI	Introduction: History and evolution of AI, comparison of human and computer skill, Component of AI, Scope and significance in different domains, Ethical considerations in AI development and deployment, Intelligent Agent, logical agent.  Problem solving through AI: Defining problem as a state space search, analyzing the problem, solving problem by searching, informed search and Uninformed Search.	7	1, 2
2	Machine Learning Basics and Natural Language Processing	Machine Learning: Neural networks and deep learning, Supervised and unsupervised learning, feature selection and engineering, learning from observation, knowledge in learning.  Natural Language Processing: Brief history of NLP, Text processing, Sentiment analysis, language translation, Early NLP system, ELIZA system, LUNAR system, General NLP system.	8	2,3
3	AI in Chemistry	Concept of Artificial intelligence, machine learning, Machine learning applications to data analysis in chemistry, databases, deep learning in chemistry, cheminformatics, molecular dynamics and simulation, chemical representation of atoms and molecules with molecular graph representation and Simplified Molecular Input Line Entry System (SMILES)	7	4
4	Applications of AI in Synthetic and Medicinal Chemistry and ethical issues:	Artificial intelligence in synthesis, molecular prediction, prediction of reaction outcomes and designing of new reactions, reactant and template selection, molecular designing and property prediction, computer-assisted synthesis design and prediction of biochemical pathways and new drug targets. Regulatory science, ethical consideration related to use of AI in chemical sciences	8	5

Effective from Session	Effective from Session: 2025-2026										
Course Code	B030202T/MT148	Title of the Course	Basic Mathematics & Statistic	L	Т	P	C				
Year	I	Semester		3	1	0	4				
Pre-Requisite		Co-requisite									
Course Objectives	To impart basic and key knowledge of elementary mathematics. By using the principal of applied mathematics to obtain										

	Course Outcomes
CO1	Learners will be able to interpret limits and continuity of functions. Also, they can find differential coefficient, differentiation of functions including function of a function, differentiation of parametric form, simple and successive differentiation.
CO2	Learners will evaluate and interpret integration as an inverse of differentiation; They will be able to find indefinite integrals of standard form, integration by parts, by substitution and by partial fraction method. They can evaluate definite integrals.
CO3	Learnerscan describe the basic concepts of simple random sampling and stratified random sampling. They can understand and find measures of central tendency (mean, median and mode), measures of variation (mean deviation and standard deviation), measure of coefficient if variation. Student will be able to understand and evaluate covariance and correlations, Karl Pearson's Coefficient of correlation and Spearman's coefficient of rank correlation. They can also be able to find regression by method of least squares.
CO4	Learners can interpret the fundamental principle of counting. They will also be able to find permutations, permutations under certain conditions, combinatorial identities. They can also apply Binomial theorem (without proof)
CO5	Learners will be able to understand the random experiment and associated sample space, events. They can also find probability and can use addition and multiplication theorems for finding probability (without proof). They will be able to understand probability distributions, and will be able to find Binomial, Poisson, and Normal distributions.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Limit and Continuity	Set and functions, left hand limit and right-hand limit, limits of function, continuity of function.	7	1
2	Differentiabilit y	Definition of differential coefficient, differentiation of function including function of a function, differentiation of parametric form, simple and successive differentiation, Leibnitz rule.	8	1
3	Integrations	Integration as inverse of differentiation, indefinite integrals of standard form, integration by parts, substitution method and partial fraction method, evaluation of definite integrals.	8	2
4	Univariate Statistics	Basic concepts of simple random sampling and stratified random sampling, measures of central tendency (mean, median and mode), measures of variation (mean deviation, quartile deviation and standard deviation), coefficient of variation.	7	3
5	Bivariate Statistics	Covariance, correlations, scatter diagram, Karl Pearson's coefficient of correlation, Spearman's coefficient of rank correlation, regression and its coefficient, estimation of regression lines by the method of least square.	7	3
6	Permutations and Combinations	Fundamental principle of counting, permutations, permutations under certain conditions, combinations, combinatorial identities, Binomial theorem (without proof), some applications of Binomial theorem.	7	4
7	Probability theory	Random experiment and associated sample space, events, definition of probability, algebra of events, addition and multiplication theorems on probability (without proof), conditional probability, Baye's theorem.	8	5
8	Probability Distributions	Probability distribution, probability mass function, probability distribution function, expectations, Binomial, Poisson, normal distributions and their mean and variance, fitting the expected frequency of Binomial and Poisson distributions.	8	5
