B.Sc. Chemistry

Effective from Se	ession: 2025-26											
Course Code	B020301T/CH232	Title of the Course	Chemical Dynamics & Coordination Chemistry	L	T	P	C					
Year	II	Semester	III	5	1	0	4					
Pre-Requisite	Certificate Co-requisite -											
Course Objectives	through kinetic the physicochemical te spectrophotometry for	ory and crystallogra chniques such as or studying chemical	ing of the characteristics and physical properties of the aphy, and to equip students with knowledge of conductometric, potentiometric, optical method kinetics and equilibrium, along with developing insi	iliqu s, po ghts i	id cry olarime nto me	stals etry,	and and					

	Course Outcomes
CO1	Learners will be able to analyze the rate and order of chemical reactions, evaluate concentration dependence, apply mathematical expressions for reaction order determination, and interpret the effects of temperature using the Arrhenius equation, activation energy concepts, collision theory, transition state theory, and thermodynamic parameters related to rate constants.
CO2	Learners will be able to interpret equilibrium constants, relate them to free energy changes, apply Le-Chatelier's principle to predict shifts in equilibrium, and analyze phase equilibria using the reaction isotherm, reaction isochore (Clapeyron-Clausius equation), derive the Gibbs phase rule, and evaluate phase equilibria in one-component (H ₂ O, CO ₂ , O ₂) and two-component systems (solid-liquid equilibria and simple eutectic systems).
CO3	Learners will be able to explain the kinetic theory of gases, apply the van der Waals equation to real gases, describe critical phenomena, interpret PV isotherms, continuity of states, the law of corresponding states, the reduced equation of state, and analyze Maxwell's distribution of molecular velocities. They will also compare the liquid state with other states of matter, explain intermolecular forces, liquid structure, and differentiate liquid crystals, their types, structures, phases, and examine gels, including their classification, preparation, properties, and applications.
CO4	Learners will be able to describe the basics of Werner's theory of coordination complexes, classify ligands and chelates, determine coordination numbers, apply IUPAC nomenclature (up to dinuclear complexes), and differentiate types of isomerism (constitutional, stereoisomerism, geometrical, and optical) in square planar and octahedral complexes.
CO5	Learners will be able to analyze electronic spectra of transition metal complexes, explain d-d transitions, interpret spectroscopic ground states, construct Orgel and energy-level diagrams, and evaluate the electronic spectrum of the [Ti(H ₂ O) ₆] ³⁺ ion. They will also assess magnetic properties, identify different types of magnetic behavior, apply methods to determine magnetic susceptibility, calculate magnetic moments using the spin-only formula and L-S coupling, and use magnetic data to interpret the behavior of 3d-metal complexes.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Chemical Kinetics & Theories of chemical kinetics	 i. Rate of a reaction, molecularity and order of reaction, concentration dependence of rates, mathematical characteristics of simple chemical reactions: zero order, first order, second order, pseudo-order, half-life, and mean life; determination of the order of reaction: differential method, method of integration, half-life method, and isolation method. ii. Effect of temperature on rate of reaction; Arrhenius equation; concept of activation energy; Simple collision theory based on the hard sphere model, transition state theory (equilibrium hypothesis); Expression for the rate constant based on equilibrium constant and thermodynamic aspects (no derivation). 	8	1
2	Chemical Equilibrium	Equilibrium constant and free energy; thermodynamic derivation of the law of mass action; Le-Chatelier's principle, reaction isotherm, and reaction isochore-Clapeyron Clausius equation and its applications.	7	2
3	Phase Equilibrium	Statement and meaning of the terms phase, component, and degree of freedom; derivation of Gibbs phase rule, phase equilibria of one component system water, CO ₂ , and O ₂ systems Phase equilibria of two component systems: Solid-liquid equilibria, simple eutectic (Bi-Cd, Pb Ag systems)	7	2
4	Kinetic theories of gases	 i. Gaseous State: Postulates of the kinetic theory of gases: deviation from ideal behaviour, van der Waals equation of state. ii. Critical phenomena: PV isotherms of real gases, continuity of states, the isotherms of the Van der Waals equation, relationship between critical constants and Van der Waals constants, the law of corresponding states, reduced equation of state. iii. Molecular Velocities: Qualitative discussions of Maxwell's distribution of molecular velocities, collision number, mean free path, and collision diameter. 	7	3
5	Liquid State	 i. Liquid State: Intermolecular forces and the structure of liquids (a qualitative description) Structural differences between solids, liquids, and gases. ii. Liquid crystals: Difference between liquid crystal, solid, and liquid; classification and structure of the nematic and cholesterol phases. iii. Liquids in solids (gels): Classification, preparation, and properties, inhibition, general application. 	7	3
6	Coordination Chemistry	Werner's theory of coordination complexes, classification of ligands, ambidentate ligands, chelates, coordination numbers, IUPAC nomenclature of coordination complexes (up to two metal centers), Isomerism in coordination compounds, constitutional and stereo isomerism, and geometrical and optical isomerism in square planar and octahedral complexes.	8	4
7	Theories of Coordination Chemistry	Metal-ligand bonding in transition metal complexes, limitations of valance bond theory, an elementary idea of crystal field theory, crystal field splitting in octahedral, tetrahedral, and square planner complexes, the John Teller effect, and factors affecting the crystal- field parameters. A brief outline of the thermodynamic stability of metal complexes; the concept of hard and soft acids and bases and factors affecting their stability.	8	4

8	Inorganic Spectroscopy and Magnetism	Electronic spectra of transition metal complexes Types of electronic transitions, selection rules for d-d transitions, spectroscopic ground states, spectrochemical series, orgel- energy level diagrams for d1 and d9 states, and discussion of the electronic spectrum of the [Ti(H ₂ O) ₆] ³⁺ complex ion. Magnetic properties of transition metal complexes, types of magnetic behavior, methods of determining magnetic susceptibility, spin-only formula, L-S coupling.	8	5

Course Code	B020302T/CH261	Title of the Course	Chemical Analysis Techniques: Principles and Applications	L	T	P	C
Year	II	Semester	III	5	1	0	4
Pre-Requisite	Certificate	Co-requisite	-				
Course Objectives	and to delve into the p	orinciples and instrumen	chniques and to explore the principles and procedures of chromat tation of UV/Visible spectrophotometry, electron microscopy and and to comprehend the principles and applications of electroanal	d their	r appl	icatio	

	Course Outcomes
CO1	Learners will be able to understand chromatographic separation and their typical applications to analyze unknown samples
CO2	Learners will be able to identify unknown substances, using electroanalytical methods
CO3	Learners will be able to apply solvent extraction for the analysis of unknown samples
CO4	Learners will be able to interpret the theoretical principles of selected instrumental methods with spectrophotometric methods
CO5	Learners will be able to design new materials and evaluate their morphological features

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Chromatography-I	Classification of chromatographic methods, principle of migration, adsorption phenomenon, nature of adsorbents, and solvent systems. Thin layer Chromatography (TLC): Advantages, preparation of plates, development of chromatogram, Detection of the spots, factors affecting Rf values and applications. Paper Chromatography: Choice of paper and solvent systems, development of chromatogram-ascending, descending, radial and two-dimensional chromatography and applications.	7	1
2	Chromatography-II	Column Chromatography: Types of stationary phases, Column packing – Wet packing technique, Dry packing technique. Selection criteria of mobile phase (solvents) for eluting, polar, non-polar compounds and its applications. Ion exchange chromatography: Cation and anion exchange resins, its application in separation of ions. Gas Chromatography: Theory and instrumentation (Block Diagram), Types of stationary phases and carrier gases (mobile phase). High performance liquid chromatography: Theory and instrumentation, stationary phases and mobile phases.	8	1
3	Electroanalytical methods-I	Potentiometry: Principle, Electrochemical cell, Electrodes- (i) Indicator and (ii) Reference electrodes – Normal Hydrogen Electrode, Quinhydrone Electrode, Saturated Calomel Electrode. Application of Potentiometry	8	2
4	Electroanalytical methods-II	Voltametry- Introduction to types of voltametric techniques, micro electrodes, overpotential and Polarization. Conductometry, Conductivity Cell, Specific Conductivity, Equivalent Conductivity. Applications of conductometry.	8	2
5	Thermal methods of analysis	Theory of thermogravimetry (TG), basic principle, instrumentation and applications	8	2
6	Separation techniques	Solvent extraction: Classification, principle and efficiency of the technique. Mechanism of extraction: Extraction by solvation and chelation. Techniques of extraction: batch, continuous and counter-current extractions.	7	3
7	Colorimetry and Spectrophotometry	General features of absorption-spectroscopy, transmittance, absorbance, and molar absorptivity. Beer Lambert's law and its limitations, the difference between Colorimetry and Spectrophotometry. Instruments – Single beam UV-Visible Spectrophotometer, Double beam UV-Visible Spectrophotometer. Lamps used as energy sources.	8	4
8	Microscopic techniques	Principles and Applications of optical and electron microscopy (SEM and TEM)	6	5

Effective from Ses	Effective from Session: 2025-26						
Course Code	B020302P/CH234	Title of the Course	Physical Analysis	L	T	P	C
Year	II	Semester	III	-	-	4	2
Pre-Requisite	Certificate	Co-requisite	-				
Course Objectives	estimate components	through volumetric	prepare solutions of various concentrations, know the analysis, surface tension, and viscosity, as well as se equilibrium experiments.				

	Course Outcomes
CO1	Learners will be able to demonstrate proficiency in calibrating laboratory equipment, performing solution dilutions (e.g. converting 0.1 M to 0.001 M solutions), and apply concepts of molecular weight, formula weight, equivalent weight, and various concentration units.
CO2	Learners will be able to determine experimentally the surface tension and viscosity of pure liquids or solutions.
CO3	Learners will be able to identify the boiling points of organic compounds with boiling points below 180°C.
CO4	Learners will be able to determine the transition temperature of substances using thermometric or dilatometric methods.
CO5	Learners will be able to analyze the effect of solutes on critical solution temperature and construct corresponding phase diagrams.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Strengths of Solution	 i. Calibration of fractional weights, pipettes, and burettes. Preparation of standard solutions. ii. Dilution: 0.1 M to 0.001 M solutions. iii. Mole Concept and Concentration Units: Mole Concept, molecular weight, formula weight, and equivalent weight. iv. Concentration units: Molarity, Formality, Normality, Molality, Mole fraction, Percent by weight, Percent by volume, Parts per thousand, Parts per million, Parts per billion, pH, pOH, milli equivalents, Milli moles 	20	1
2	Surface Tension and Viscosity	 i. Determination of the surface tension of a pure liquid or solution ii. Determination of the viscosity of a pure liquid or solution 	10	2
3	Boiling point and Transition Temperature	 i. Boiling point of common organic liquid compounds (any five): n-butyl alcohol, cyclohexanol, ethyl methyl ketone, cyclohexanone, acetylacetone, isobutyl methyl ketone, isobutyl alcohol, acetonitrile, benzaldehyde, and acetophenone [The boiling points of the chosen organic compounds should preferably be within 180 °C.] ii. Transition Temperature: Determination of the transition temperature of the given substance by thermometric or dialometric method (e.g. MnCl₂.4H₂O or SrBr₂.2H₂O) 	20	3, 4
4	Phase Equilibrium	 i. To study the effect of a solute (e.g., NaCl, succinic acid) on the critical solution temperature of two partially miscible liquids (e.g., phenol-water system) and to determine the concentration of that solute in the given phenol-water system. ii. To construct the phase diagram of a two-component (e.g., diphenylamine-benzophenone) system by the cooling curve method. 	10	5

Year	II	Semester	III	1	-	2	3		
Pre-Requisite	Certificate	ificate Co-requisite -							
Course Objectives	plant and animal sourc	es of food, gain knowled	ance and evolution of food, understand the functions of food dge of food processing from diverse plant sources, develop d, and acquire comprehensive knowledge of the food indust	insight					

	Course Outcomes
CO1	Learners will be able to explain the fundamentals of food chemistry, including its history, water structure, and the interactions among food
CO2	components. Learners will be able to describe the foundations of carbohydrates (monosaccharides, oligosaccharides, and polysaccharides), starch and cellulose derivatives as food constituents, and evaluate the nutritional value of sugars and related products; they will also be able to explain the components of lipids, food lipids and their health implications, and the role of antioxidants.
CO3	Learners will be able to explain the basics of protein structure and functions, enzyme structure and functions, vitamin structure, types and functions, minerals and their nutritional aspects, as well as the bioavailability of nutrients in vegetables and fruits.
CO4	Learners will be able to describe the basics of food pigments and colours, and identify common preservatives and food adulterants.
CO5	Learners will be able to evaluate food quality parameters and interpret food laws and standards.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction and history	Food chemistry, history, water structure and relations in food components.	10	1
2	Carbohydrates and Lipids	Carbohydrates: monosaccharide, oligosaccharides and polysaccharides, starch and cellulose derivatives as food constituents, sugar and related products nutritional value, lipids: components, food lipids and health, antioxidants.	10	2
3	Structure and function of Proteins & Vitamins	Protein's structure and functions, enzyme's structure and functions, vitamin's structure, types and functions, minerals and nutritional aspects, vegetables and fruits, bioavailability of nutrients	10	3
4	Food pigments and colors	Food oxidants, food pigments, natural and synthetic food colours, flavouring agents, sweeteners, emulsifiers and stabilizers, spices and herbs	10	4
5	Food preservatives and Adulteration of food	Food preservatives, organic foods, advantages and disadvantages of organic food, food fortification. Food adulteration, types of adulteration: intentional adulteration, incidental adulteration.	10	4
6	Evaluation of food quality, laws & standards	Evaluation of food quality, sensory tests, types of tests, objective evaluation and instruments used for texture evaluation Food laws, food standardization and regulation agencies in India, national standards, international standards.	10	5

Course Objectives	MaDeCuBeBeLea	acquainted with Hindi able to utilize function arn the translation aes	ge Skills. Hindi r accessing the precious heritage of our ancient culture. i Knowledge System.				

Total No. of Lectures: 45 Minimum Marks: 100

10	tai 110. 01 Lectures. 45
	Course Outcomes
CO1	To introduce the knowledge system of Hindi Language.
CO2	To equip students with the basics of Hindi Grammar.
CO3	To highlight the descriptive use of Hindi Grammar and its analysis.
CO4	To familiarize students with functional use of Hindi through literature.
CO5	To acquaint students with the influence of Hindi Literature on Ancient Indian Culture and Aesthetics.

Total Units: 04	
Credits 02:	م مجو مي الانزيال: 04
Credits 02:	كرؤيش:02

Unit I

Introduction of Alphabet:

- Urdu alphabet, consonant, vowels, aspirated & retroflexed letters, and the recognition of different 1.1 forms of the letters.
- Reading practice of Urdu words, practicing of writing Urdu words, combines letters to write two-1.2 letter, three-letter, and four-letter words, and writing Urdu in the Nastaliq script.
- 1.3 Exercises and activities

اكائىاول

تعسارف عسلم بجإ

روف تنجی، مصوتے /مصیتے، حروف ہکاری یاہائیہ، حروف حلتی، حروف منقوط وغیر منقوط، حرکات وسکنات، حروف علت حروف کی اشکال کی پہچان کتابت: حروف ہجا کی مثق، دوحر فی، سه حر فی اور جہار حر فی الفاظ کے حروف کو ملا کر لکھنے کی مثق،ار دونستعلیق کے لکھنے کی مثق۔

ا. ٣: لكهنے اور يڑھنے كى مشق وسر گرمياں:

Unit II

Reading & Dictation:

- a) Prose: Tote ki chalaki, Guftgu ke aadaab, KahawateN, Urdu news. (NCERT Book, Class III) 2.1 b) Poetry: Sari Dunya ke Malik, Barsaat, Lab pe aati hai. Shaam. (NCERT Book, Class III)
- 2.2 Urdu writings dictation
- Exercises and activities 2.3

اكائىدوم

ارد وعبارت خوانی و املانولیی

مجوز هار دومتن نظم ونثر ،اخبار ورسائل ششر: طوطے کی جالا کی، گفتگو کے آداب، کہاوتیں، اردو خبرین (این می آرفی بک، درجہ سوم)،

اللم : سارى دنياكے مالك، برسات كارات، لب آتى ہے، شام، (اين كى آر ئى بك، در جدسوم)

ار د واملانویسی، و نقل نویسی کی مشق : 1.1

لكهنے اور بڑھنے كى مشق وسر گرمياں: : - . -

Jargons and Idioms:

- Urdu idioms, their kinds and examples. 3.1
- Use of suffixes & prefixes, Urdu writings dictation 3.2
- 3.3 Exercises and activities

اکائی سوم

اردومحاورات، بالقبولاحق:

۳.۱: مروجه اردومحاورون اور ضرب الامثال کی مشق
۳.۲- سابقه اور لاحقه کااستعال
۳.۳- کلصفه اور پژھنے کی مشق اور سر گرمیان

Unit IV

Compositions:

Urdu Letters & applications writings skills 4.1

Introductory dialogue & etiquette in the Urdu language 4.2

4.3 Exercises and activities

اکائی جہارم

خطوكتابت و درخواست نوليي

۲.۴: اردو خطو کتابت اور در خواست نویسی کی مشق

٢.٢: تعارف، نشست وبرخاست مين استعال جونے والے ارد وجملے و مكالمے

۳. m. الصفاوريز صفى مشق اور سر كرميال

Course Code	B020401T/CH239	Title of the Course	Quantum Mechanics and Analytical Techniques	Mechanics and Analytical Techniques L T P						
Year	II	Semester	IV	5	1		4			
Pre-Requisite	Certificate	Co-requisite	-							
Course Objectives	equation and its apprelevance to photoch	olications, molecular or nemistry and kinetics, w	erstanding of atomic structure, elementary quantum mechani bital theory, and molecular spectroscopy (rotational, vibralie emphasizing the principles and societal applications of gnostics, food safety, forensics, and research.	ational	, electi	onic) v	with			

	Course Outcomes				
CO1	Learners will be able to analyze and apply the fundamental concepts of elementary quantum mechanics to explore new areas of research in				
	chemistry and allied fields of science and technology.				
CO2	Learners will be able to work effectively in interdisciplinary teams, applying their knowledge of molecular spectroscopy to solve con				
CO2	scientific problems.				
CO3	Learners will develop problem-solving skills, critical thinking, and analytical reasoning by interpreting data obtained from various spectroscopic				
COS	techniques.				
CO4	Learners will learn to determine and elucidate the structure of organic molecules using IR, NMR, and mass spectrometry.				
Learners will develop practical skills in purification techniques, including solvent extraction, thin-layer chromatography (TL					
CO3	chromatography, for effective separation and analysis of compounds.				

T I 24			Contract	Mannad
Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Elementary Quantum Mechanics	Black-body radiation, Planck's radiation law, photoelectric effect, heat capacity of solids, Hamiltonian Operator. Schrödinger wave equation (time dependent and time independent) and its importance, physical interpretation of the wave function, postulates of quantum mechanics, particle in a one-dimensional box. Schrödinger wave equation for H- atom, separation into three equations (without derivation), quantum numbers and their importance, hydrogen like wave functions, radial wave functions, angular wave functions. Molecular orbital theory, basic ideas – Criteria for forming MO from AO, construction of MO by LCAO- H^{2+} ion, calculation of energy levels from wave functions, physical picture of bonding and anti-bonding wave functions, concept of σ , σ^* , π , π^* orbitals and their characteristics.	10	1
2	Molecular Spectroscopy	Introduction: Electromagnetic radiation, regions of the spectrum, basic features of different spectrometers, statement of the Born-Oppenheimer approximation, degrees of freedom	5	2
3	Rotational Spectrum, Vibrational Spectrum and Raman spectrum	 i. Diatomic molecules, Energy levels of a rigid rotor (semi-classical principles), selection rules, spectral intensity, distribution using population distribution (Maxwell Boltzmann distribution) determination of bond length, qualitative description of non-rigid rotor, isotope effect. ii. Energy levels of simple harmonic oscillator, selection rules, pure vibrational spectrum, intensity, determination of force constant and qualitative relation of force constant and bond energies, effect of anharmonic motion and isotope on the spectrum, idea of vibrational frequencies of different functional groups. iii. Concept of polarizability, pure rotational and pure vibrational, Raman spectra of diatomic molecules, selection rules. Electronic Spectrum: Concept of potential energy curves for bonding and antibonding molecular orbitals, qualitative description of selection rules. 	10	3
4	UV-Visible Spectroscopy	Origin of spectra, interaction of radiation with matter, fundamental laws of spectroscopy and selection rules. Types of electronic transitions, λ max, chromophores and auxochromes, Bathochromic and Hypsochromic shifts, Intensity of absorption; application of Woodward Rules for calculation of λ max for the conjugated dienes: alicyclic, homoannular and heteroannular; extended conjugated systems distinction between cis and trans isomers (Cis and trans stilbene).	5	3
5	Infrared Spectroscopy (IR Spectroscopy)	Fundamental and non-fundamental molecular vibrations; Hooke's law selection rule, IR absorption positions of various functional groups (C=O, OH, NH, COOH and nitrile), Effect of H- bonding, conjugation, resonance and ring size of cyclic ketones and lactones on IR absorptions; Fingerprint region and its significance; application in functional group analysis and interpretation of I.R. Spectra of simple organic compounds.	8	4
6	¹ H-NMR Spectroscopy (PMR)	NMR Spectroscopy: introduction; nuclear spin; NMR active molecules; basic principles of Proton Magnetic Resonance; choice of solvent and internal standard; equivalent and non-equivalent protons; chemical shift and factors influencing it; ring current effect; significance of the terms: up-/downfield, shielded and deshielded protons; spin coupling and coupling constant (1st order spectra); relative intensities of first-order multiplets: Pascal's triangle; chemical and magnetic equivalence in NMR; anisotropic effects in alkene, alkyne, aldehydes and aromatics; NMR peak area, integration; relative peak positions with coupling patterns of common organic compounds; interpretation of NMR spectra of simple	8	4

		compounds. Applications of IR, UV and NMR spectroscopy for identification of simple organic molecules such as Ethanol, Ethyl acetate, acetone, acetaldehyde, dimethylformamide, Cis and trans 1,2- dimethyl cycloprpanone, propene, vinyl chloride, acetophenone, benzaldehyde, phenol, Toluene and ethyl benzene.		
7	Introduction to Mass Spectrometry	Principle of mass spectrometry, the mass spectrum, mass spectrometry diagram, molecular ion, metastable ion, fragmentation process, McLafferty rearrangement.	6	4
8	Separation Techniques: Solvent extraction	Classification, principle, and efficiency of the technique. Mechanism of extraction: extraction by solvation and chelation. Technique of extraction: batch, continuous and counter current extractions. Qualitative and quantitative aspects of solvent extraction: extraction of metal ions from aqueous solution, extraction of organic species from the aqueous and non-aqueous media. Chromatography: Classification, principle, and efficiency of the technique. Mechanism of separation: adsorption, partition & ion exchange. Development of chromatograms: frontal, elution, and displacement methods.	8	5

Year	II	Semester	IV	5	1	0	4			
Pre-Requisite	Certificate	Certificate Co-requisite								
Course Objectives	such as sampling techn water, and cosmetic sa emphasize the use of Spectrophotometry for i	iques, accuracy, precision imples using classical tit instrumental techniques interpreting chemical com ata representation, pH mo	nemistry by exploring its interdisciplinary applications and an and error analysis; to equip students with practical exprations, complexometric methods, spectrophotometry, and including UV-Vis, IR, NMR, Mass Spectrometry, appositions and assessing environmental and consumer safety easurement, and quantification of macro and micronutrient	pertise d flan and A y; and	in anal ne phot tomic to enab	lyzing ometry Absorp ole stud	soil, ; to tion ents			

	Course Outcomes
CO1	Learners will be able to apply sampling principles, evaluate data reliability, and analyze soil and water samples through pH measurement, complexometric titrations, and pollutant detection using interdisciplinary analytical chemistry methods.
CO2	Learners will be able to identify constituents in cosmetic and environmental samples, perform titrations, forensic analyses, and nutrient estimations using instrumental methods to enhance analytical precision and critical thinking skills.
CO3	Learners will be able to interpret UV-Vis and IR spectral data, apply Woodward–Fieser rules, and analyze vibrational frequencies to characterize organic compounds and their interactions with electromagnetic radiation.
CO4	Learners will be able to analyze NMR spectra, differentiate proton environments, interpret chemical shifts and coupling patterns, and determine the structures of organic compounds using NMR instrumentation.
CO5	Learners will be able to interpret mass spectral fragmentation patterns, apply atomic absorption spectrophotometry (AAS) methodologies with calibration techniques, and quantify trace elements in diverse samples using advanced analytical instrumentation.

Introduction Analytical Chemistry and its interdisciplinary nature; Concept of sampling; Importance of accuracy, precision and sources of error in analytical measurements; Analysis of soil: Composition of soil; Concept of pH and pH measurement; Complexometric titrations; Chelation, Chelating agents, use of indicators; Determination of pH of soil samples; Estimation of Calcium and Magnesium ions as carbonate by complexometric titration. Definition of pure water, sources responsible for contaminating water, water sampling methods, water purification methods; Determination of pH, acidity and alkalinity of a water sample; Determination of dissolved oxygen (DO), free chlorine and chloride ion of a water sample. Major and minor constituents and their function; Determination of constituents of talcum powder: Magnesium oxide, Calcium oxide, Zine oxide and Calcium carbonate by complexometric itration. Applications (Anyone): To study the uses of phenolphthalein in trap cases: (i)To analyze arson accelerants;(ii) To carry out analysis of gasoline. Instrumental demonstrations: Estimation of macro nutrients: Potassium, Calcium, Magnesium in soil samples by flame photometry(i) Spectrophotometric determination of Iron in Vitamin / Dietary Tablets; (ii)Spectrophotometric determination of Iron in Vitamin / Dietary Tablets; (ii)Spectrophotometric determination of Caffeine and Benzoia acid in Soft Drink. Wave-like propagation of light, absorption of electromagnetic radiation by organic molecules allowed and forbidden transitions, instrumentation, conjugated systems and transition energies, Woodward – Fieser rules; unsaturated carbonyl compounds, conjugated dienes and polyenes. Introduction, absorption in the infrared region, theory of infrared spectroscopy, instrumentation, molecular vibrations, factors affecting vibrational frequencies, characteristic absorptions in common classes of compounds, characteristic vibrational frequencies of some organic compounds. Introduction, basic theory, instrumentation, important useful ter	Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO

Course Objectives	To gain knowledge a distillation, evaporation and heat transfer.	nd skills related to to, and absorption; filt	his paper as follows: Utilities in the chemical industration and extraction; drying; crystallization and polyn	istry i morph	nclude ism; fl	uid flo	ow;			

	Course Outcomes
CO1	Learners will be able to understand the flash point, ignition point of liquids, and smoke point of a fuel.
CO2	Learners will be able to understand and analyse nitration, sulphonation, Friedel-Crafts reaction, esterification, hydrolysis, oxidation, halogenation, chlorosulphonation, reduction, and amination.
CO3	Learners will be able to comprehend that TLC keeps an eye on each step of the reaction. 4-bromo aniline, 3-nitroaniline, sulphanilamide, 4-Amino benzoic acid, 4-Nitro benzoic acid, dihalobenzenes, and nitrohalobenzenes
CO4	Learners will be able to monitor and analyse chemical reactions with the help of TLC.
CO5	Learners will be able to perform limit tests for chlorine, arsenic, and heavy metals (Pb, As, Hg, Fe, and ash content) identification.

Pre-Requisite	Certificate	Co-requisite	-				
Course	To perform, design,	interpret, and docum	ent laboratory experiments using critical thinking a	nd sci	entific	inquir	y.
Objectives	This is at a level suita	able to succeed in an e	entry-level position in the chemical industry or a chem	istry g	gradua	te prog	ram.

		Course Outcomes
C	01	Learners will be able to explore new areas of research in both chemistry and allied fields of science and technology, basically in molecular weight determination.
C	02	Learners will be able to function effectively as members of an interdisciplinary problem-solving team, applying their knowledge of spectrophotometry to analyze and interpret experimental data.
C	03	Learners will be skilled in problem solving , critical thinking, and analytical reasoning as applied to scientific problems, especially spectroscopy.
C	04	Learners will gain an understanding of how to determine the structure of organic molecules using IR and NMR spectroscopic techniques.
CO	05	Learners will be able to develop and evaluate the basic skills required for purification, solvent extraction, TLC, and column chromatography.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Molecular Weight Determination	 i. Determination of molecular weight of a non-volatile solute by Rast method/ Beckmann freezing point method. ii. Determination of the apparent degree of dissociation of an electrolyte (e.g., NaCl) in aqueous solution at different concentrations by ebullioscopy. 	15	1
2	Spectrophotometry	 i. To verify Beer – Lambert Law for KMnO4/K2Cr2O7 and determining the concentration of the given solution of the substance from absorption measurement ii. Determination of pKa values of indicator using spectrophotometry. 	15	2
3	Spectroscopy	 i. Assignment of labelled peaks in the IR spectrum of the same compound explaining the relative frequencies of the absorptions (C-H, O-H, N-H, C-O, C-N, C-X, C=C, C=O, N=O, C≡C, C≡N stretching frequencies; characteristic bending vibrations are included. Spectra to be provided). ii. Assignment of labelled peaks in the ¹H NMR spectra of the known organic compounds explaining the relative δ-values and splitting pattern. iii. Identification of simple organic compounds by IR spectroscopy and NMR spectroscopy (Spectra to be provided). 	15	3, 4
4	Chromatographic Separations	 i. Paper chromatographic separation of following metal ions: Ni (II) and Co (II); Cu(II) and Cd(II) ii. Separation of a mixture of o-and p-nitrophenol or o-and p-aminophenol by thin layer Chromatography (TLC) iii. Separation and identification of the amino acids present in the given mixture by paper chromatography. Reporting the Rf values TLC separation of a mixture of dyes (fluorescein and methylene blue). 	15	5

Year	II	Semester	emester IV 2				2		
Pre-Requisite	Certificate	Co-requisite	-						
Course Objectives	fitness, weighthe value of education. physical fitness, mental	nt management, and life Delve into traditional ga well-being, and a balan	f physical education, fitness, and wellness. Gain knowledgestyle choices. Explore the relationship between yoga and names, their cultural significance, and their benefits. Apply knowled lifestyle. Develop critical thinking, problem-solving skil f cultural heritage and physical activity promotion.	nental nowled	health. lge for	Empha	size		

	Course Outcomes
CO1	Learners will be able to understand the fundamental concepts and principles of physical education and can explain the concept of fitness and wellness and its significance in maintaining a healthy lifestyle.
CO2	Learners will be able to demonstrate knowledge of weight management techniques and strategies for maintaining optimal body weight as well as identify and analyze various aspects of an individual's lifestyle and its impact on overall health and well-being.
CO3	Learners will be able to recognize the relationship between yoga and mental health and understand how yoga practices contribute to mental well-being. Comprehend the importance of value education and its role in personal and social development.
CO4	Learners will be able to evaluate the traditional games of India and their cultural significance, highlighting their physical and mental benefits. Apply theoretical knowledge and practical skills acquired during the course to promote physical fitness, mental well-being, and a balanced lifestyle. Develop critical thinking and problem-solving abilities related to physical education and wellness.
CO5	Learners will be able to communicate effectively about the importance of physical education, fitness, wellness, and traditional games, both orally and in written form. Foster an appreciation for Indian traditional games and their role in preserving cultural heritage and promoting physical activity. Engage in teamwork, cooperation, and leadership skills through practical activities and group projects related to physical education and wellness.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Physical Education	 i. Meaning, Definition, Aim and Objective. ii. Misconception About Physical Education. iii. Need, Importance and Scope of Physical Education in Modern Society. iv. Physical Education Relationship with General Education. v. Physical Education in India before Independence. vi. Physical Education in India after Independence. 	15	1
2	Concept of Fitness and Wellness, Weight Management, and Lifestyle	 Meaning, Definition and Importance of Fitness and Wellness. Components of Fitness. Factor Affecting Fitness and Wellness. Meaning and Definition of Obesity. Causes of Obesity. Management of Obesity. Health problems due to Obesity. Meaning, Definition, Importance of Lifestyle. Factor affecting Lifestyle. Role of Physical activity in the maintains of Healthy Lifestyle. 	15	2, 3
3	Yoga and Meditation	 i. Historical aspect of yoga. ii. Definition, types of scopes & importance of yoga. iii. Yoga is related to mental health and value education. iv. Yoga is related to Physical Education and sports. v. Definition of Asana, differences between asana and physical exercise. vi. Definition and classification of pranayama. vii. Difference between pranayama and deep breathing. viii. Practical: Asana, Suraya-Namaskar, Bhujang Asana, Naukasana, Halasana, ix. Vajrasan, Padmasana, Shavasana, Makrasana, Dhanurasana, Tad Asana. x. Course	Code	B030402T/MT237	Title of the Course	Numerical Analysis & Testing of Hypothesis	L	T	P	С	
Year		II	Semester	IV	3	1	0	4	
Pre-Rec	quisite		Course Type	Minor					
Course Objectives To impart basic and key knowledge of numerical and statistical analysis. Numerical and statistical analysis plays a very important role for higher studies. After successfully completing this course, the student will be able to explore subjects into their respective dimensions.									
Course Outcomes									
CO1	Learners will be able to calculate and analyze errors in numerical computations. Students will also be able to find the solutions of algebraic and transcendental equations by different methods.								
CO2	Learners wi	ll be able to interpola	te the polynomial functions.						
CO3		ll be able to obtain nu differential equations		blems of mathematics. e.g. numerical differentiation and	integra	ition, s	olution		
CO4	Learners wi	ll be able to apply var	rious statistical techniques in	n the time series data.					
CO5	Learners wi	ll be able to perform a	a test of hypothesis as well a	as understand the applications of different types of tests.					
Unit No.	Title o	of the Unit		Content of Unit Content of Unit				ed
