

Integral University, Lucknow

Effective from Session:2026-27 (NEP)							
Course Code	CS151	Title of the Course	Foundations of Cyber Security & Artificial Intelligence	L	T	P	C
Year	1 st	Semester	1 st	4	0	2	5
Pre-Requisite	Basic Computer Knowledge	Co-requisite					
Course Objectives	- Understand basic cybersecurity concepts, threats, and defense mechanisms. - Explain fundamental principles and applications of Artificial Intelligence. - Analyze cyber threats, attack techniques, and vulnerabilities. - Understand cyber laws, ethics, and governance. - Apply AI concepts in cybersecurity solutions.						
Course Outcomes							
CO1	Define and recall fundamental concepts of cybersecurity, including the CIA triad, types of cyber threats, common attack vectors, and basic security practices along with cybersecurity frameworks such as NIST and ISO 27001.						
CO2	Explain the fundamentals of Artificial Intelligence, including machine learning paradigms, key AI branches, tools, and ethical considerations in real-world applications.						
CO3	Apply knowledge of cyber threats, attack methodologies, vulnerability assessment, and penetration testing techniques to identify and mitigate security risks in networked systems.						
CO4	Analyze cybersecurity laws, ethical principles, and AI-driven security mechanisms to assess privacy, regulatory compliance, and emerging security challenges.						
CO5	Evaluate the effectiveness of AI-based cybersecurity solutions, including intrusion detection systems, malware analysis, and automated defense mechanisms for protecting digital infrastructure.						
THEORY							
Unit No.	Title of the Unit	Content of Unit			Contact Hrs.	Mapped CO	
1	Introduction to Cybersecurity	- Fundamentals of cybersecurity: definition, scope, and importance in the digital age - CIA triad: Confidentiality, Integrity, and Availability — concepts and real-world examples - Types of cyber threats: structured vs unstructured threats, internal vs external threats - Common attack types: malware, ransomware, phishing, spear phishing, and social engineering - Attack vectors: email, web, removable media, insider threats, and supply chain attacks - Basic security practices: strong passwords, multi-factor authentication, software updates - Security policies and user awareness: acceptable use, data handling, and incident reporting - Introduction to cybersecurity frameworks: NIST, ISO 27001 (overview)			8	CO1	
2	Fundamentals of Artificial Intelligence	- Introduction to Artificial Intelligence: definition, history, and evolution from rule-based systems to ML - Key branches of AI: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision - AI applications in the real world: healthcare, finance, autonomous vehicles, and cybersecurity - Basics of Machine Learning: training data, features, labels, model, and prediction - Types of learning: supervised learning (classification, regression), unsupervised learning (clustering) - Reinforcement learning: concept of agents, environment, rewards, and policy - Popular AI tools and frameworks: Python, TensorFlow, scikit-learn, Jupyter Notebook - Ethical considerations in AI: bias, fairness, transparency, and accountability			8	CO2	
3	Cyber Threats & Attack Methodologies	- Types of cyber-attacks: Denial of Service (DoS), Distributed DoS (DDoS), Man-in-the-Middle (MITM) - Ransomware attacks: encryption-based extortion, delivery methods, and notable incidents - Injection attacks: SQL Injection, Command Injection, and Cross-Site Scripting (XSS) - Network security basics: firewalls (packet filtering, stateful), IDS/IPS, and VPN concepts - Wireless network threats: rogue access points, WEP/WPA vulnerabilities, and evil twin attacks - Vulnerability assessment: asset identification, scanning, risk scoring using CVSS			8	CO3	

		- Penetration testing basics: phases — Reconnaissance, Scanning, Exploitation, Reporting - Case studies of real-world cyber attacks: WannaCry ransomware, SolarWinds, Mirai botnet		
4	Cyber Laws, Ethics & AI in Security	- Cyber laws and IT Act 2000: key provisions, offences, penalties, and amendments - Global cybersecurity regulations: GDPR (EU), CCPA (US), and data localisation laws - Ethical hacking principles: permission, scope, responsible disclosure, and bug bounty programs - Privacy and data protection: PII, data minimization, consent, and breach notification - Intellectual property in cyberspace: copyright, software piracy, and digital rights - AI ethics in security: explainability, accountability, and avoiding biased threat detection - AI in cybersecurity: automated threat detection, SOAR, and intelligent monitoring systems - Future trends: Zero Trust Architecture, AI-driven SOC, quantum-safe cryptography	8	CO4
5	AI Applications in Cybersecurity & Defense Mechanisms	- Role of AI in modern cybersecurity: automating threat detection, reducing response time - AI-based threat detection: anomaly detection using statistical models and ML classifiers - Pattern recognition in network traffic: identifying attack signatures and zero-day threats - Machine Learning for Intrusion Detection Systems (IDS): feature extraction from network logs - Supervised ML models for IDS: Decision Trees, Random Forest, and SVM classifiers - AI in malware detection: static and dynamic feature extraction, behavioural analysis - AI-powered threat intelligence: automated IOC extraction and threat feed correlation - Defense mechanisms using AI: automated incident response, adaptive firewalls, honeypots	8	CO5

PRACTICAL

S.No.	List of Experiments	Contact Hrs.	Mapped CO
1	Explore and compare popular cybersecurity tools (e.g., Wireshark, Nmap). Identify network packets, open ports, and potential vulnerabilities on a sample network. Document findings with a short threat report.	2	CO1
2	Simulate a phishing attack scenario using safe educational tools. Analyse the email structure, identify red flags, and draft an awareness guide for end-users.	2	CO1
3	Install and use Python to perform basic data operations. Write a program that reads a log file, counts event types, and identifies anomalous entries using simple rule-based logic.	2	CO2
4	Implement a simple supervised ML classifier (Naive Bayes or Decision Tree) using scikit-learn to classify emails as spam or legitimate. Evaluate accuracy, precision, and recall.	2	CO2
5	Use Nmap to perform a port scan on a test VM. Identify open services, research known CVEs for each service, and produce a vulnerability assessment report with recommended mitigations.	2	CO3
6	Simulate a Man-in-the-Middle (MITM) attack in a controlled lab environment using ARP spoofing. Capture traffic with Wireshark, analyse intercepted data, and discuss countermeasures.	2	CO3
7	Research the IT Act 2000 and relevant Indian cybersecurity regulations. Prepare a case study on a real-world cybercrime incident, identifying violated laws, ethical issues, and legal consequences.	2	CO4
8	Implement a basic password strength checker in Python that enforces security policies (length, complexity, common password list). Discuss ethical considerations of password storage and hashing (MD5 vs bcrypt).	2	CO4
9	Build an anomaly-based Intrusion Detection System (IDS) using Python and scikit-learn. Train a model on the KDD Cup 99 dataset to classify normal vs attack traffic. Evaluate using a confusion matrix.	4	CO5
10	Apply a pre-trained ML model (e.g., Random Forest) to a malware dataset to classify files as benign or malicious. Visualise feature importance and discuss how AI improves detection over signature-based methods.	2	CO5

Syllabus: Physics

For

B.Tech. Computer Science, Civil, Mechanical, Electrical, Electronics & Communication Engineering

Effective from Session: 2025-26			
Course Code	PY101	Title of the Course	Physics
Year	First	Semester	First/Second
Pre-Requisite	10+2 with Physics	Credit	04
Course Objectives	The purpose of this undergraduate course is to impart basic knowledge of fundamental concept of physics which is necessary for a strong engineering knowledge base and to support this knowledge through its various experiments.		

Course Outcomes				
CO1	Explain and apply the principles of interference and diffraction to determine the wavelength of light using different optical instruments.			
CO2	Analyze optical activity and the working principles of lasers for their application in science and technology.			
CO3	Interpret and apply special relativity concepts including Lorentz transformations, time dilation, length contraction, and mass-energy equivalence to physical problems.			
CO4	Explain quantum phenomena such as blackbody radiation, photoelectric effect, and wave mechanics, and apply Schrodinger's equation to simple systems.			
CO5	Analyze magnetic, superconducting, and nanomaterial properties for their technological applications.			
Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Wave Optics	Theory: Interference: Methods of formation of coherent sources, theory of interference fringes, fringe width, Fresnel's Biprism, thin film interference, Newton's ring and its application in determination of wavelength of light. Diffraction: Theory of Fraunhofer's diffraction at single slit, Intensity distribution curve, (No derivation), Introduction to the grating, grating equation and its application in determination of wavelength of light. Practicals: - To determine the wave length of monochromatic light with the help of Fresnel's Biprism. - To determine the wave length of monochromatic light by Newton's ring. - To determine the wavelength of prominent spectral lines by plane diffraction grating.	8	1
2	Optical Activity and Modern Optics	Theory: Polarization: Production of plane polarized light by reflection, Brewster Law and Malus Law, Double refraction, Nicol prism, Optical activity, specific rotation, polarimeter and its application in determination of specific rotation. Optical Fiber: Principle of fiber optics, numerical aperture. LASER: Main components of laser, Einstein's coefficients, He-Ne laser and its applications. Practicals: - To determine the specific rotation of cane sugar solution using Half Shade polarimeter. - To determine the refractive index of a liquid using laser.	8	2
3	Relativistic Mechanics	Theory: Brief Introduction to the Michelson-Morley Experiment (Negative results and their explanation), Galilean Transformation Equations, Lorentz Transformation Equations (No Derivation) and their consequences (Length Contraction, Time Dilation and Velocity Addition Theorem), Energy-Mass Relation, Relativistic Kinetic Energy. Practicals: 1. To determine the wavelength of Monochromatic light using Michelson Interferometer	8	3
4	Quantum Physics	Theory: Black body radiation (Qualitative discussion only – Stefan's law, Wein's law, Rayleigh-Jean's law, Planck law). Photoelectric Effect and Compton Effect, de-Broglie Hypothesis, Heisenberg's uncertainty principle (no derivation) and its applications (non-existence of electron in nucleus), Wave function and its physical admissibility, orthogonality of wavefunctions, normalization of wave functions, Schrodinger's equation and its application (particle in one dimensional potential box). Practicals: - To determine the value of Planck's Constant using LEDs. - To verify Stefan's law by electrical method.	8	4
5	Physics of Materials	Theory: Magnetic Properties: Magnetization, Origin of magnetic moment, Phenomena of hysteresis and its applications. Superconductors: Effect of magnetic field (Meissner effect), Temperature dependence of critical field, Type I and Type II superconductors, Nano-Materials: Basic Principle of Nanoscience and Technology, Structure, Properties and uses of Fullerene and Carbon Nanotubes, Applications of Nanotechnology Practicals: - To draw hysteresis (B-H curve) of a specimen in the form of a transformer and to determine its hysteresis loss. - To determine the energy band gap of a semiconductor using a PN junction diode.	8	5

Integral University, Lucknow

Effective from Session:2024-25							
Course Code	EE103	Title of the Course	Basic Electrical Engg	L	T	P	C
Year	I	Semester	I / II	3	0	2	4
Pre-Requisite	None	Co-requisite	None				
Course Objectives	• Knowledge and concept of D.C Circuit Analysis and Network Theorems Circuit. • Use of Steady State Analysis of Single-Phase AC Circuits AC fundamentals. • Knowledge and concept of Three Phase AC Circuits Three phase system and measuring devices. • Basic concepts of Power System and Transformer • Study of Electromechanical energy conversion devices: AC/ DC Machines.						

Course Outcomes	
CO1	Know about the concept of D.C Circuit Analysis and Network Theorems Circuit.
CO2	Steady State Analysis of Single Phase AC Circuits AC fundamentals.
CO3	Know about concept of Three Phase AC Circuits Three phase system and measuring devices
CO4	Layout of Power System and transformer
CO5	Know about Electromechanical energy conversion devices: AC/ DC Machines

THEORY				
Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	D.C. Circuit Concept and its Analysis	Circuit concepts: Active and passive elements, linear and nonlinear network, unilateral and bilateral elements, Series and Parallel connections, Ohms law, Kirchhoff's Law: loop and nodal methods of analysis. Network theorems: Superposition theorem, Thevenin's theorem, Maximum Power Transfer theorem	8	CO1
2	Domestic/ Single Phase A.C. Circuits and its Analysis	AC fundamentals: Average and effective value of Sinusoidal waveform , form factor and peak factor, Concept of phasor, Analysis of R, L and C Circuits, power factor, Apparent, active and reactive powers, causes and problems of low power factor, resonance in series RLC circuit.	8	CO2
3	Commercial/ Industrial Three Phase A.C. Circuits and its measurement	Three phase system: Its necessity and advantages, meaning of phase sequence, star and delta connections, balanced supply, line and phase voltage/current relationship. Measuring Instruments: Types of instruments: construction and working principle of PMMC, MI type instruments, Electrodynamometer type wattmeter.	8	CO3
4	Transformer and its concept in Household/ Commercial application	Magnetic circuit: Concepts, analogy between electric and magnetic circuit. Single Phase Transformer: Principle of operation, construction, emf equation, losses and efficiency.	8	CO4
5	House Hold/ Industry oriented Electrical Machines	UNIT-5: House Hold / Industry oriented Electrical Machines DC Machines: Construction, Types, Principle of operation and application. Single Phase Induction Motor: Principle of operation and application. Three Phase Induction Motor: Principle of operation and application. Three Phase Synchronous Machines: Principle of operation and application.	8	CO5

PRACTICAL			
S. No.	List of Experiments	Contact Hrs.	Mapped CO
1	Verification of Thevenin's Theorem.	2	1
2	Verification of Superposition Theorem.	2	1
3	Verification of Maximum Power Transfer Theorem.	2	1
4	To study V-I characteristics of diode.	2	2
5	To study the input & output characteristics of BJT in CE configuration.	2	2
6	To study the full wave rectifier circuit with & without filter and determine the ripple factor.	2	2
7	To study the phenomenon of resonance in series RLC circuit.	2	3
8	Determination of losses in single phase transformer by OCT and SCT.	2	3
9	To calibrate a single-phase induction type energy meter.	2	4
10	To study the running and reversing of a three phase SCIM.	2	4

11	Study of OP Amp based inverting and non-inverting amplifier	2	2

Effective from Session: 2024-25							
Course Code	LN132	Title of the Course	Communication Skills: Theory and Practices	L	T	P	C
Year	I st	Semester	I/I	3	0	1	4
Pre-Requisite	10+2	Co-requisite	Graduation				
Course Objectives	- The course aims to educate the students in the artistry and utility of the English language for professional purposes by studying language. - The key component of the various types of professional communication is communication in English, which is now a global language. - The Department of Languages caters to the needs of the students aspiring for training, expertise, and excellence in professional communication with a marked emphasis on English for Specific/Special Purposes (ESP).						

Course Outcomes	
CO1	Students will be introduced to the basic understanding of communication and Professional Communication. Knowledge of Professional, cultural, and cross-cultural communication will be imparted. The meaning and process of communication, verbal and nonverbal communication will be focused. A basic understanding of questions will be provided. They will also learn & practice how to introduce themselves in a professional setting & how to manage speaking anxiety.
CO2	Students will develop an understanding of the concept and theory of Lingua Franca ELF, Its Importance and its use as a means of communication between populations speaking vernaculars that are not mutually intelligible. Students will develop an understanding of IPA symbols and improve pronunciation through practice
CO3	Basic tools of communication and improvement in communicative competence. Oral Communication techniques through situational conversations.
CO4	Understanding the structural and functional grammar and basic structure of language. Students will also develop the ability for group discussion and debate.
CO5	Enhancement of writing skills in English i.e., writing applications, reports, and various types of letters. Preparing PowerPoint Presentations and practicing for oral presentations to develop competency-based professional skills.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Professional Communication	Professional Communication: It's Meaning and Importance, Essentials of Effective Communication, Barriers to Effective Communication. (Theory)	6	CO 1
		Lab-1 Introduction (SWOT Analysis) Framing Questions (Yes/No Questions, Why-Questions, Question tags, Rhetorical Questions)	2	
2	Oral Communication Skills (Speaking Skills)	English as Lingua Franca: From Theory to Practice Importance of Spoken English Status of Spoken English in India (Theory)	6	CO 2
		Lab-2 International Phonetic Alphabets (IPA) Symbols Spelling and Pronunciation (Practical)	2	
3	Basic Vocabulary	Euphemism, One-word Substitution, Synonyms, Antonyms, Homophones, Idioms and Phrases, Common Mistakes, Confusable Words and Expressions, Portmanteau Words, Foreign Words and Expressions. (Theory)	6	CO 3
		Lab-3 Oral Communication Practice: - Asking for and giving information Congratulating people on their success Expressing condolences Apologizing and forgiving (Practical)	2	
4	Basic Grammar	Articles, Prepositions, Tenses, Concord, (Subject-Verb agreement), Modal Auxiliaries, Verbs: its Kinds and uses, Degrees of Comparison, Punctuation. (Theory)	6	CO 4

		Lab-4 Oral Practice: Group Discussion (Based on Topic and Case Study) Debate (Topic Based) (Practical)	2	
5	Basic Composition	Report Writing: What is report? Kinds and Objectives of reports, writing reports, Business Letter writing; Introduction to Business Letters, Layout of Business letters, Letters of Enquiry/Complaint Proposal writing. (Theory) Lab-5 Oral Presentation through PPT (Topic based) (Practical)	6 2	CO 5

SYLLABUS

SEMESTER – I

1. Name of the Department: Mathematics																
2. Course Name		Mathematics-I for Computer Science & Engineering								L		T		P		
3. Course Code		MT149								3		1		0		
4. Type of Course (use tick mark)										Core ()		DE ()		FC (v)		
5. Pre-requisite (if any)		10+2 with Mathematics			6. Frequency (use tick marks)		Even ()			Odd (v)		Either Sem ()		Every Sem ()		
7. Total Number of Lectures, Tutorials, Practical's																
Lectures = 30					Tutorials = 10					Practical = Nil						
8. COURSE OBJECTIVES: The course is aimed to develop the skills in mathematics which is necessary for grooming them into successful engineering graduate. The topics introduced will serve as basic tools for specialized studies in science field.																
9. COURSE OUTCOMES (CO):																
After the successful course completion, learners will develop following attributes:																
COURSE OUTCOME (CO)		ATTRIBUTES														
CO1		Able to calculate rank of matrix, characteristic equation & characteristic roots & use the applicability of Cayley Hamilton Theorem to find inverse of matrix which is very important in many engineering application.														
CO2		To develop ability to find out the various properties of a matrices and linear transformation over a vector spaces.														
CO3		Develops ability to solve Jacobian, error and approximation and Extrema of the function.														
CO4		Learn the evaluation policy of some special function like gamma & Beta function. & their relation which is helpful to evaluate some definite integral arising in various branch of Engineering.														
CO5		Able to determine vector differentiation and integration.														
10. Unit wise detailed content																
Unit-1		Number of lectures			08											
Introduction, Different types of matrices, Algebraic operations, Elementary row and column transformations, Rank of matrix, Linear dependence, Consistency of linear system of equations, Characteristic equation, Cayley-Hamilton theorem, Eigen values and Eigen vectors.																
Unit-2		Number of lectures			08											
Vector space, subspace, examples, linear span, basis, dimension, extension of a basis of a subspace, intersection and sum of two subspace, examples. Linear transformation, kernel and range of a linear map , rank-nullity theorem, row and column spaces																
Unit-3		Number of lectures			08											
n^{th} derivative, Leibnitz theorem, Partial differentiation, Euler's theorem, curve tracing, change of variables , expansion of function of several variables..																
Unit-4		Number of lectures			08											
Jacobian, Approximation of errors, Extrema of functions of several variables, Lagrange's method of multipliers (simple applications).																
Unit-5		Number of lectures			08											
Double and triple integrals, Change of order of integration, change of variables, Gamma and Beta functions, Applications to area and volume, Dirichlet's integral and its applications.

Effective from Session:2024-25							
Course Code	HM101	Title of the Course	RASHTRA GAURAV	L	T	P	C
Year	I	Semester	I	2	0	0	2
Pre-Requisite	Intermediate (Any Stream)	Co-requisite	None				
Course Objectives	The objective of the course on "Rashtra Gaurav" is to explore and critically analyze the multifaceted dimensions of national pride and glory, as depicted in the paper. Participants will delve into the historical, cultural, social, and political aspects that contribute to the concept of "Rashtra Gaurav" (National Pride) in the context of the specific themes and perspectives presented in the paper. Through in-depth discussions, readings, and interactive sessions, participants will gain a comprehensive understanding of the factors that shape and define a nation's sense of pride, and how these factors influence individual and collective identities. The course aims to foster a nuanced appreciation for the significance of "Rashtra Gaurav" in contemporary society, encouraging participants to critically evaluate its implications and applications within diverse global contexts.						

Course Outcomes	
CO1	To understand the basics of Indian Society and culture.
CO2	To understand the literature, science and astrology.
CO3	To understand Indian heritage.
CO4	To examine the philosophical and spiritual developments in India.
CO5	To evaluate the contributions of Major National Characters and Personalities.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Indian Society & Culture	- Unity in Diversity: Cultural & Religious Harmony - Indian Diaspora - Ancient Indian Civilization. - National and International Awards & Awardees	05	01
2	Literature, Science, Astrology	- Indian Epics: Ramayan & Mahabharata - Prominent litterateur: Shudrak, Kalidas, Amir Khusru, - Kautilya's Arthashastra - Panini's Ashtadhyayi	05	02
3	Indian Heritage	- Cultural Heritage in India: Buddhist Monuments at Sanchi, Ajanta & Ellora Caves, Khajuraho, Taj Mahal - Tourist Places in India: Red Fort, Ambar Palace, Kaziranga National Park	04	03
4	Philosophical and Spiritual Developments	- Sufism & Bhakti Movement: Bulleh Shah, Data Ganj Baksh, Khwaja Moinuddin Chishti, and Nizamuddin Auliya. Tulsidas, Surdas, Meera, Nanak & Kabir - Jainism: Mahavir's Biography and Education - Buddhism: The life of Buddha, Contributions of Buddhism to India's Culture	05	04
5	Major National Characters And Personalities	- Ashoka the Great and His Dhamma - Raja Ram Mohan Roy & Brahmo Samaj - Swami Vivekanand and his philosophies - Mahatma Gandhi: Role of Gandhi in Indian National Movement - Dr. Bhimrao Ambedkar: A Chief architect of the Indian Constitution	06	05

Effective from Session: 2024-25							
Course Code	CS131	Title of the Course	Web Design Lab	L	T	P	C
Year	I	Semester	I	0	0	2	1
Pre-Requisite	None	Co-requisite	None				
Course Objectives	The objectives of this course uses of various front-end tools. They can understand and create applications on their own. Demonstrate and design of web site can be carried out.						

Course Outcomes	
CO1	Develop front end website architecture.
CO2	Basics of HTML and CSS.
CO3	Work Alongside graphic designers for web design features.
CO4	Apply acquired knowledge and skills to build a web project.
CO5	Handle various aspects of full web development, ensuring they can build robust and scalable websites.

Experi- ment No.	Name of Experiment	Contact Hrs.	Mapped CO
1	Write an HTML code to display your education details in a tabular format.	2	1
2	Write an HTML code to create a Home page having three links: About Us, Our Services and Contact Us. Create separate web pages for the three links.	2	1
3	Write an HTML code to illustrate the usage of the following: Ordered List, Unordered List and Definition List	2	2
4	Write a HTML program to design a form which should allow to enter your personal data (Hint: make use of text field, password field, e-mail, lists, radio buttons, checkboxes, submit button)	2	2
5	Write HTML Code to demonstrate the use of Anchor Tag for the Following: - • Creating a web link that opens in a new window. • Reference within the same html document. • Making an image a hyperlink to display second image.	2	3
6	Write an HTML code to create a frameset having header, navigation, and content sections.	2	3
7	Write an HTML code to demonstrate the usage of inline, internal, and external CSS.	2	4
8	Create a web page to demonstrate the usage of following CSS properties: • List properties • Border Properties • Positioning Properties • CSS Lists	2	4
9	Create a web page to demonstrate the usage of following CSS properties: • CSS Tables • CSS Menu Design • CSS Image Gallery	2	5
10	Introduction to GitHub and Version Control Tools • Git • Concurrent Versions System (CVS) • Apache Subversion (SVN) • Mercurial	2	5

Integral University, Lucknow

Effective from Session: 2023-24

Course Code	EC102	Title of the Course	Switching theory and logic design	L	T	P	C
Year	I	Semester	II	3	1	2	5
Pre-Requisite		Co-requisite					
Course Objectives	- To understand the concepts of digital electronics and their applications. To provide a conversion in mathematical form. Can identify type of complements, can apply 1's and 2's complements. - To learn the Boolean Expression, K- Map method. To understand the basic concepts of various combinational circuits including gates, adders, subtractor, multiplexers. - To learn the analysis of various sequential circuits, flip flops, counters and various shift registers. - To understand the concept and design of synchronous/asynchronous sequential logic. - To understand the concepts of various logic devices programming logic array, programming array logic PROM and various memories.						

Course Outcomes	
CO1	Students shall be able to understand fundamental concepts of digital systems and binary numbers and converting numbers between different bases.
CO2	Students shall be able to understand logic of universal gates to build simple digital circuits and analyze Boolean expressions using fundamental postulates and theorems.
CO3	Students shall be able to implement Boolean functions using Karnaugh Maps for simplification.
CO4	Given concept students shall be able to understand and analyze the structure and function of combinational and sequential circuits.
CO5	Given a AND and OR array, student shall be able to analyze the characteristics of different types of memory.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Binary System	Introduction of Digital Computers and Digital Systems, Binary numbers, Base Conversion, Conversion of numbers, Binary, Decimal, Hexadecimal, Octal, Binary Code: BCD, Excess-3, Gray Code	8	CO1
2	Binary Logic and Boolean Algebra	Basic Logic Gates: AND, OR, NOT, Universal Gates: NAND, NOR, Combinational Gates: X-OR, X-NOR gates, Fundamental Postulates of Boolean Algebra, Basic theorems of Boolean algebra, De-Morgan's Theorems.	8	CO2
3	Boolean Function Implementation	Need for simplification, K-Map method, 2-Variable K-map, 3-Variable K – Map, K-Map using Don't care condition.	8	CO3
4	Combinational Logic	Combinational circuits, Analysis procedure, design procedure, Binary adder-subtractor, Decimal adder, Binary multiplier. Multiplexer & Demultiplexer. Sequential Logic: Latches, Flip Flops, Synchronous/Asynchronous Counter, Register	8	CO4
5	Memory	Introduction of logic families: TTL, DTL & CMOS. Memory: ROM: PROM, EROM, RAM SRAM, DRAM PLD: PLA, PAL, and FPGA	8	CO5

Books recommended:

Text Books:

1. "Digital Design", M. Morris Mano and M. D. Ciletti, 5th Edition, Pearson Education

---	-----------------------------------

Integral University, Lucknow

Effective from Session: 2025-26 (NEP)							
Course Code	CS101	Title of the Course	Computer Programming	L	T	P	C
Year	I	Semester	II	3	0	2	4
Pre-Requisite	None	Co-requisite	None				
Course Objectives	- To give knowledge of computers, networks, algorithms & flowcharts. - To provide fundamental concepts of programming language 'C'. - To show the use of functions and pointers to different problems. - To study the implementation of arrays, matrices and strings. - To give concepts of user defined datatypes, structure & union						

Course Outcomes	
CO1	Understanding basic concepts of computer, networks and formulation of algorithmic solutions to problems.
CO2	Understanding of programming concepts of C language and their implementation.
CO3	Analyze and develop programs on pointers and functions.
CO4	Acquire the knowledge and develop programs on different operations on arrays, matrices & strings.
CO5	Implementation of programs on structure, union & dynamic memory allocation.

THEORY				
Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction to Computers	Generation of computers, Characteristic and classifications of computers. Components of Computer: CPU, Various I/O Devices, Memory & its types, (Memory Hierarchy, Storage Media), Computer Software and their types, Operating System. Computer Networks & Communication: LAN, MAN, WAN, Network Topologies, Modes of Data Communication. Introduction to Internet and its Safeguard: Internet Addresses, Domain Name System, URL, Web Browsers Search Engines, Firewalls, Anti-Virus, Translators. Algorithm and flowchart: Algorithm and flow chart characteristics, Sketching Flowcharts of various problems.	9	1
2	Introduction to C	Standard I/O in 'C', 'C' Fundamental, C Character set, Constants, Variables, Keywords and Identifiers, Data types, Declaration. Operators and Expressions, Conditional statements (If, If-else), Nesting of if- else statement, switch statement, The? operator, goto statement. Decision making and Looping (While, Do-While, for), Break and Continue statements, Case Control Structures (Switch), C programs based on above concepts.	8	2
3	Pointers & Functions	Declaration and initialization of pointers, accessing the address of the variable, accessing the variable through the pointer, chain of pointers, pointers operators, pointer arithmetic Introduction to Functions: Need of "C" function, User Defined and Library Functions, Prototype of Function, Call by Value; Call by Reference; Nesting of Functions, Recursion. Pointers with function, C program based on above concept.	9	3
4	Array	Concept of One Dimensional and Multi-Dimensional arrays, Declaration, Operations: insert, delete, search, traverse, and merge, matrix operations, Sorting: Bubble sort, merge sort, insertion sort. Character array and strings: declaring and initializing strings variable, reading and writing a character, reading and writing strings from terminal, Arithmetic operations on characters, string handling functions. Application of pointers, and function on array, C program based on above concept.	10	4
5	Structures	Defining Structure, Declaration of Structure Variable, Accessing Structure members, copying and comparing structure variable, operation on individual member, nesting of structures, Array of structures. Application of pointers and function on Structures. Union Defining Union Declaration of Union, difference between structure and Union, Introduction of Static and Dynamic memory allocation- The process of Dynamic memory allocation, C program based on above concept.	8	5
PRACTICAL				
S. No.	List of Experiments		Contact Hrs.	Mapped CO
1	Write a Program to print sum and multiply of two numbers.		2	1
2	WAP that calculates the Simple Interest and Compound Interest. The Principal, Amount, Rate of Interest and Time are entered through the keyboard.		2	1
3	Write a Program to enter the temperature in Celsius(c) then count it into Fahrenheit.		2	1
4	Write a Program to swap the number taking the help of third variable.		2	1
5	Write a Program to convert Decimal to Binary in C.		2	1
6	Write a Program to find the greater number enter by user.		2	2
7	Write a Program to check a year is leap year not.		2	2
8	Write a Program to print number is even or odd.		2	2
9	Write a C program to design calculator with basic operations using Switch case.		2	2
10	Write a Program to print the no is positive or negative.		2	2
11	Write a C program to print Fibonacci Series without using Recursion and using Recursion.		2	3

12	WAP to find a Factorial in C.	2	3
13	Write a Program to enter any no and check whether the given no is palindrome or not.	2	3
14	Write a Program to enter any no. and check whether the given no. is Armstrong or not.	2	3
15	Write a Program to Print Pattern * * * * * * * * * *	2	3
16	Write a Program to Print Pattern 1 2 3 4 1 2 3 1 2 1	2	3
17	Write a C program to form Pascal Triangle using numbers.	2	3
18	Write a program to find in C to design the report card of 5 subject according to the following condition if the totalpercentage are. >=35 and <45 III Div >=45 and <60 II Div >=60 I Div If any students score <35 in any of the subject display fail	2	3
19	Write a Program to create 2-D array or order M*N and insert the element and display it.	2	4
20	Write a Program to find the addition of two matrix of order M*N.	2	4
21	Write a Program to find the Transpose of the matrix.	2	4
22	WAP to find Reverse of an Array using Functions in C.	2	4
23	Write a Program to swap two number using function pointers.	2	5
24	WAP to demonstrate Student Record System in C.	2	5

Attributes & SDGs Common for all branches/Disciplines

Course Code	Course Title	Attributes							SDGs No.
		Employability	Entrepreneurship	Skill Development	Gender Equality	Environment & Sustainability	Human Value	Professional Ethics	
ES102	Concept of Environmental Studies					√			SDGs 6,13,14,& 15

Effective from Session:

Enrichive from Session:							
Course Code	ES102	Title of the Course	Concept of Environmental Studies	L	T	P	C
Year	I	Semester	I/II	2	1	0	3
Pre-Requisite	10+2	Co-requisite					
Course Objectives	The objectives of environmental studies are Creating awareness about environmental problems among people and imparting basic knowledge about the environment and its allied problems. The importance of environmental science and environmental studies cannot be disputed. The need for sustainable development is a key to the future of mankind. Continuing problems of pollution, loss of forest, solid waste disposal, degradation of the environment, issues like economic productivity and national security, Global warming, the depletion of the ozone layer and loss of biodiversity have made everyone aware of environmental issues						
Course Outcomes							
CO1	Students will be able to understand about relationship between Humans and Environment						
CO2	Understand about Ecosystem, Biodiversity and Conservation						
CO3	Identifying environmental pollution, its impact on humans, ecosystems and control measures through latest technologies						
CO4	Analyze and apply knowledge for understanding complex environmental- economic-social challenges, and active participation in solving current environmental problems and preventing the future ones						
CO5	Evaluate the Environmental crisis and can propose effective environmental management						
Unit No.	Title of the Unit	Content of Unit			Contact Hrs.	Mapped CO	
1	Unit I. Humans and the Environment	The man-environment interaction: Humans as hunter-gatherers; Mastery of fire; Origin of agriculture; Emergence of city-states; Great ancient civilizations and the environment; Middle Ages and Renaissance; Industrial revolution and its impact on the environment; Population growth and natural resource exploitation; Global environmental change. The emergence of environmentalism: Anthropocentric and eco-centric perspectives (Major thinkers)			06	CO1	
2	Unit II. Natural Resources, Ecosystem and Biodiversity	Overview of natural resources: Definition, Classification and types of natural resources; Status and challenges. Biodiversity as a natural resource; Levels and types of biodiversity; Biodiversity in India and the world; Biodiversity hotspots. Major ecosystem types in India and their basic characteristics; Ecosystem services- classification and their significance. Threats to biodiversity and ecosystems, Major conservation policies: in-situ and ex-situ conservation approaches.			10	CO2	
3	Unit III. Environmental Pollution and International Treaties	Understanding pollution: Production processes and generation of wastes; Assimilative capacity of the environment; Definition of pollution; Point sources and non-point sources of pollution. Air pollution: Sources; Primary and secondary pollutants; Indoor air pollution; National Ambient Air Quality Standards. Technology to mitigate air pollution Water pollution: Sources; River, lake, and marine pollution, groundwater pollution; Water quality parameters and standards; Technology to mitigate water pollution Soil pollution and solid waste; Solid and hazardous waste; Technology to mitigate waste pollution Noise pollution: Definition; Unit of measurement of noise pollution; Sources of noise pollution; Noise standards; Technology to mitigate noise pollution Thermal and Radioactive pollution: Sources, impacts and Technology to mitigate pollution			10	CO3	
4	Unit IV. Climate Change: Impacts, Adaptation and Mitigation	Observed impacts of climate change on ocean and land systems; Sea level rise, changes in marine and coastal ecosystems; Impacts on forests and natural ecosystems; Impacts on animal species, agriculture, health, urban infrastructure, Indigenous knowledge for adaptation to climate change. Major International Environmental Agreements: CBD; Cartagena Protocol on Biosafety; Nagoya Protocol on Access and Benefit-sharing; CITES; Ramsar Convention; UNCCD; Vienna Convention for the Protection of the Ozone Layer; Montreal Protocol and the Kigali Amendment; Basel Convention; Stockholm Convention; Minamata Convention; UNFCCC; Kyoto Protocol; Paris Agreement; India's status as a party to major convention. Major Indian Environmental Legislations, Industry-specific environmental standards; Waste management rules; National Green Tribunal; Some landmark Supreme Court judgments			10	CO4	
5	Case Studies and Field Work	• Discussion on one national and one international case study related to the environment and sustainable development. • Field visits to identify local/regional environmental issues, make observations including data collection and prepare a brief report. • Documentation of campus biodiversity. • Campus environmental management activities such as solid waste disposal, water management, and sewage treatment. • Model Making			09	CO5

Integral University, Lucknow

Effective from Session: 2023-24

Course Code	ME101	Title of the Course	Basic Mechanical Engineering	L	T	P	C
Year	I	Semester	II	3	1	0	4
Pre-Requisite	NONE	Co-requisite	NONE				
Course Objectives	1. Be able to have the basic concepts of thermal sciences and temperature measurement on the basis of Zeroth law of thermodynamics. 2. To understand and apply first and second law of thermodynamics to various processes and real systems. 3. Be able to model the problem using free-body diagrams and reach to solution by using equilibrium equations. 4. To impart knowledge of structural analysis for safe design. 5. Be able to test different mechanical properties of engineering materials.						

Course Outcomes	
CO1	Explain basic concepts of thermal sciences and temperature measurement on the basis of zeroth law of thermodynamics.
CO2	Understand and apply first and second law of thermodynamics to various processes and real systems.
CO3	Model the problem using free-body diagrams and reach to solution by using equilibrium equations.
CO4	To perform structural analysis for safe design.
CO5	Knowledge of different mechanical properties of engineering materials and its testing.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Fundamental Concepts for modelling of thermal systems	Role of thermodynamics in different fields of engineering, thermodynamics system, surrounding and universe, macroscopic & microscopic point of view, concept of continuum, thermodynamic equilibrium, property, state, path, process, Energy and its form, temperature and its measurement, Zeroth law of thermodynamics.	8	CO1
2	First law & Second law of thermodynamics as a tool for analysing thermal systems	First law of thermodynamics and its application for non flow processes, Flow processes and control volume, Flow work, Steady flow energy equation, Mechanical work in a steady flow process. Essence of second law of thermodynamics, Thermal reservoir, heat engines, COP of heat pump and refrigerator and its introduction to industrial applications. Statements of second law, Carnot cycle, Clausius inequality and its applications.	8	CO2
3	Introduction to engineering mechanics and its application	Role of engineering mechanics in different fields of engineering, Laws of motion, Transfer of force to parallel position, Resultant of planer force system. Free Body diagrams, equilibrium and its equation, Coulomb's law of friction, Equilibrium of bodies involving dry friction.	8	CO3
4	Structure analysis for safe design	Beams: Introduction, its types and uses in engineering application, concept of shear force and bending moment, Shear and bending moment diagram for statically determinate beams. Simple Stress and strain: Introduction, Normal & shear stress- strain for unidirectional loading, pure bending of beam and its applications.	8	CO4
5	Mechanical properties and testing of engineering materials	Introduction to engineering materials & their applications, Mechanical properties of engineering materials. Mechanical Testing: Tensile and compressive test, stress-strain diagrams for ductile and brittle materials bending test, hardness testing and impact test.	8	CO5

SYLLABUS
SEMESTER – II

1. Name of the Department: Mathematics & Statistics																
2. Course Name		Mathematics-II for Computer Science & Engineering			L	T	P									
3. Course Code		MT150			3	1	0									
4. Type of Course (use tick mark)					Core ()	DE ()	FC (v)									
5. Pre-requisite (if any)		10+2 with Mathematics	6. Frequency (use tick marks)		Even (v)	Odd ()	Either Sem ()	Every Sem ()								
7. Total Number of Lectures, Tutorials, Practical's																
Lectures = 30			Tutorials = 10		Practical = Nil											
8. COURSE OBJECTIVES: The course is aimed to develop the skills in mathematics which is necessary for grooming them into successful engineering graduate. The topics introduced will serve as basic tools for specialized studies in science field.																
9. COURSE OUTCOMES (CO): After the successful course completion, learners will develop following attributes:																
COURSE OUTCOME (CO)		ATTRIBUTES														
CO1		Students will understand the methods to solve first and higher order linear equations differential equations of certain types and interpret the solutions														
CO2		To use shift theorems to compute the Laplace transform, inverse Laplace transform and the solutions of second order, linear equations with constant coefficients.														
CO3		Students will be able to determine given function in terms of sine and cosine terms in Fourier series.														
CO4		Students will gain an understanding of probability and its applications. They will also learn different kind of probability distributions. They will understand the concept of correlation and regressions.														
CO5		Students will be able to apply method of least squares to find the curve of best fit for the given data.														
10. Unit wise detailed content																
Unit-1		Number of lectures	08													
Linear differential equations of first order, Linear differential equations of higher order with constant coefficients, Complementary functions and particular integrals, Solution of second order differential equations by changing dependent and independent variables, Method of variation of parameters, Applications to engineering problems (without derivation) .																
Unit-2		Number of lectures	08													
Laplace transform of different types of functions, Laplace transform of derivatives and integrals, Unit step function, Laplace transform of periodic functions, Inverse Laplace transform, Convolution theorem, Applications to solve simple linear differential equations.																
Unit-3		Number of lectures	08													
Periodic functions, Trigonometric series , Fourier series of period 2π , Euler's formulae, Even and odd functions, Functions having arbitrary period, Change of interval, Half range sine and cosine series., Fourier transform, Fourier cosine and sine transforms.																
Unit-4		Number of lectures	08													
Correlation and Regression Analysis, Definition of Probability: Classical and Axiomatic, Conditional Probability, Baye's theorem, Binomial Distribution, Poisson distribution and Normal Distribution.																
Unit-5		Number of lectures	08													
Method of least squares, Curve fitting of straight line and parabola, solution of cubic and biquadratic equations.																
11. CO-PO mapping																
COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4

Year	I	Semester	I								
Pre-Requisite	None	Co-requisite	None								
Course Objectives	- Main objective is to teach the fundamentals of Engineering Graphics. - This course enhances visualization skill and imagination power. - To understand techniques of drawings for various fields of engineering - To improve their technical communication skill in the form of communicative drawings.										

Course Outcomes

CO1	Describe the fundamentals of engineering drawing, use of geometrical instruments and drawing steps
CO2	To understand the concept of projection and acquire visualization skills, draw the projection of points, lines and planes.
CO3	Classify solids and projection of solids at different positions
CO4	To get the exact sectioned view of solids and development of their surfaces.
CO5	To draw isometric projection and perspective views of an object.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Lettering and geometrical constructions	Describe the fundamentals of engineering drawing, use of geometrical instruments and layout for initial drawing.	2	CO1
2	Orthographic projections of points	Describe the fundamentals orthographic projections and use of geometrical instruments and layout for initial drawing.	2	CO2
3	Projections of lines	Describe the fundamentals of projections of lines and use of geometrical instruments and procedure for the drawing.	2	CO2
4	Projections of solids	Describe the fundamentals of projections of solids and use of geometrical instruments and procedure for the drawing.	2	CO3
5	Sectioning of solids	Describe the fundamentals of sectioning of solids and use of geometrical instruments and procedure for the drawing.	2	CO4, CO3
6	Isometric Projections	Describe the fundamentals of Isometric projections and use of geometrical instruments and procedure for the drawing.	2	CO5
7	Production drawing	Describe the fundamentals of production drawing.	2	CO1, CO2

Integral University, Lucknow

Effective from Session:2025-26

Course Code	CS161	Title of the Course	Python Programming	L	T	P	C
Year	1st	Semester	1st	3	0	2	4
Pre-Requisite		Co-requisite					

Course Objectives	- Understand the process of installing and configuring Python along with its IDEs. To introduce Python fundamentals with a focus on syntax, control structures, and functions. - To develop strong understanding of data structures and modular coding. - To cultivate efficient coding habits for data analysis and AI applications. - To be able to understand the concept of data visualization techniques and its implementations.
--------------------------	---

Course Outcomes

CO1	Understand the process of python installation, IDEs, Python syntax, data types, and control structures.
CO2	Develop basic python programs using data structures, demonstrating foundational programming skills.
CO3	Apply, and evaluate functions & modules through object-oriented programming principles in Python. Utilize Python function and modular programming approach for problem-solving.
CO4	Analyze, apply, and optimize Python codes using built-in functions for developing efficient solutions. Debug Python code effectively using standard techniques and tools
CO5	Create, Design, and assess solution to real world problems using data visualization techniques, integrating various python-programming concepts for practical implementation.

THEORY

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction to Python	Fundamentals of Python: Overview of Python programming language and its significance, Python IDEs and setting-up the environment, Introduction to Jupiter notebooks, Basic Syntax, variables, data types (int, float, str, bool), and, handling Input/output functions, Control structures: if statements, loops	8	CO1
2	Elementary Data Structures in Python	Data Structures: Lists, tuples, sets, and dictionaries, List comprehensions and dictionary comprehensions, Basic operations on data structures (Lists, Tuples, Dictionaries); Advanced data manipulation: comprehensions, dictionary merging, slicing, and nested structures.	7	CO2
3	Functions & Modules	Functions & Modules: Defining and calling functions, Function arguments and return values, Importing and using modules, Creating and using custom modules. Functions, scope, default args, lambda, and modules	7	CO3
4	Efficient Coding & Debugging Techniques	Coding & Debugging: Code Optimization Techniques in Python: Code optimization using built-in functions: map, filter, zip; Refactoring for performance. Debugging with try-except, assertions; Introduction to Python debugging tools (e.g., pdb).	9	CO4
5	Data Visualization & Real-world Applications	Introduction to Matplotlib: Basic plotting with Matplotlib, Customizing plots (titles, labels, legends), Subplots and grid plots. Seaborn for Statistical Plots: Introduction to Seaborn, Creating various plots (histograms, box plots, violin plots), Interactive plots with Plotly. Applying learned concepts to solve simple data analysis or AI-related problems.	9	CO5

PRACTICAL

S.No.	List of Experiments	Contact Hrs.	Mapped CO
1	Understanding Python installation and its Integrated Development Environments (IDEs). Write a program to illustrate various data types & concepts of variables/Constant in Python.	2	CO1
2	Write a program to perform various Arithmetic Operations on numbers in Python (Addition, Subtraction, Multiplication, Division, etc.) along with conditional statements.	2	CO1
3	Perform operations on lists, tuples, and dictionaries.	2	CO2
4	Use comprehensions and nested structures for compact code.	2	CO2
5	Write a program implement the concept of "Functions" in python and sort „n" numbers in ascending and descending order after taking input (Integer number) from user. Define and use functions with default and keyword arguments.	2	CO3
6	Practice optimization using map, filter, and lambda functions.	2	CO3
7	Handle errors using try-except and raise exceptions deliberately.	2	CO4
8	Debug a faulty Python script using built-in debuggers and logging.	2	CO4
9	Extract text from sample social media data and count word frequency.	2	CO5
10	Perform basic sentiment analysis using keyword-based matching.	2	CO5

Integral University, Lucknow

Effective from Session:2025-26

Course Code	CS162	Title of the Course	A.I. and Machine Learning	L	T	P	C
Year	1st	Semester	2nd	3	0	2	4
Pre-Requisite		Co-requisite					

Course Objectives	- Understand the fundamentals of AI and ML including key concepts and their real-world applications. - Gain knowledge of different machine learning types: supervised, unsupervised, and reinforcement learning. - Analyse data using classification, regression, and clustering techniques. - Implement basic machine learning algorithms using Python. - Understand Artificial Neural Network basics and Build & evaluate a machine learning model for a real-world problem.
--------------------------	--

Course Outcomes

CO1	Understand key AI and ML concepts and their applications.
CO2	Explain and apply supervised learning techniques like classification and regression.
CO3	Implement unsupervised learning models such as clustering and dimensionality reduction.
CO4	Develop ML models using Python libraries (e.g., scikit-learn).
CO5	Evaluate and analyze model performance for real-world problem-solving and explain Artificial Neural Network basics

THEORY

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction to AI and ML	Introduction To Machine Learning, Supervised Learning, Unsupervised Learning, Reinforcement Learning, Statistical Decision Theory Regression, Statistical Decision Theory Classification, and Decision tree learning. Key concepts and real-world applications in fields like healthcare, finance, and automation. Types of ML	7	CO1
2	Supervised Learning: Classification	Introduction to classification, k-nearest neighbour, Naive Bayes classifier, linear discriminant analysis, support vector machine, decision trees, bias-variance trade-off, cross-validation methods such as leave-one-out (LOO) cross validation, k-folds cross validation. Algorithms: Logistic Regression, Decision Trees, SVMs, Naive Bayes. Applications and use-cases.	8	CO2
3	Supervised Learning: Regression	Introduction to Regression, Linear Regression, Simple Linear Regression, Multiple Linear Regression, Ridge Regression, Multivariate Regression, Subset Selection, Shrinkage Method, Partial Least Square, Principle Component Analysis. Linear Regression, Lasso, and Ridge Regression. Performance metrics (R^2 , MSE). Practical scenarios.	9	CO3
4	Unsupervised Learning: Clustering	Cluster evaluation techniques.: K-means / K-medoid, top-down, bottom-up: single-linkage, multiple linkage, Partitional Clustering, Hierarchical Clustering, The BIRCH Algorithm, The CURE Algorithm, Density Based Clustering, dimensionality reduction, principal component analysis, DBSCAN.	8	CO4
5	Dimensionality Reduction & Neural Network	Dimensionality Reduction – PCA & t-SNE, Applications in Data Visualization and Preprocessing, Perceptron, Gradient Descent & Delta Rule, Multilayer Perceptron (MLP), Feed-Forward Neural Network, Artificial Neural Networks – Training, Initialization, Validation, Deep Neural Network (DNN), Unsupervised Learning,	8	CO5

PRACTICAL

S.No	List of Experiments	Contact Hrs.	Mapped CO
1	Build and evaluate a decision tree model	2	CO1
2	Perform K-means clustering on customer segmentation dataset	2	CO1
3	Apply PCA for dimensionality reduction and visualize output	2	CO2
4	Develop a churn prediction model using supervised learning	2	CO2
5	Evaluate the model using accuracy, precision, recall, F1-score.	2	CO3
6	Visualize results using confusion matrix and ROC curve.	2	CO3
7	Tune hyper parameters using GridSearchCV	2	CO4
8	Perform predictive analysis using multiple predictor variables	2	CO4
9	Perform binary classification using logistic regression.	2	CO5
10	Classify linearly separable data (i.e. AND, OR Gate)	2	CO5

Effective from Session: 2023-24							
Course Code	EC101	Title of the Course	Basic Electronics	L	T	P	C
Year	I	Semester	I	3	0	0	3
Pre-Requisite		Co-requisite					
Course Objectives	- Understand the basics of semiconductors, including how current flows and how various types of diodes work. - Analyze the characteristics and biasing techniques of Bipolar Junction Transistors (BJTs) and Field Effect Transistors (FETs). - Design and implement basic circuits using operational amplifiers (op-amps) for various functionalities like inverting, integrating, and differentiating signals. - Grasp the concepts of number systems, logic gates, and Boolean algebra, and learn how to simplify logic functions using Karnaugh maps. - Explore different types of sensors and transducers, understand the working principles of basic motors, and learn about common consumer electronics and their applications.						

Course Outcomes	
CO1	Understand and analyze the behavior of semiconductor materials and basic electronic devices like diodes and transistors.
CO2	Design and build circuits using operational amplifiers for various applications.
CO3	Apply Boolean algebra and logic gates to simplify digital circuits.
CO4	Comprehend the working principles of various sensors, transducers, and basic motors for robotics.
CO5	Demonstrate a basic understanding of common consumer electronics and their functionalities.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Semiconductor & Devices	Current Conduction in Semiconductors, Electrons and holes, PN junction diode, working and its characteristic, Halfwave and full wave rectifiers, LED. BJT characteristics and circuits: Transistor, configuration and characteristics, transistor biasing.	8	CO1
2	Field Effect Transistors	JFET: Working and its characteristics, MOSFET: Working of Enhancement and depletion type, Biasing of FET. Implementation of Basic functions through circuits (Using Operational Amplifier) Op-Amp & its application: Inverting, Non-inverting, integrator, differentiator, Summer.	8	CO2
3	Number System & Logic gates	Number system, Conversion, 2's and 10's, 1's Compliments, 9's Compliments Addition and Subtraction, Boolean algebra, Logic gates, Minimization of logical function using Karnaugh map.	8	CO3
4	Sensors & Transducers	Types and Application of Sensors & Transducers, Pressure sensor, IR sensors, PiezoElectric transducers. Basics of Motors: Working principle of Servo Motors, Stepper Motors.	8	CO4
5	Consumer Electronics	Working of TV, Remote, Microwave Oven, Washing Machine, Electronic Security systems. Application of Digital Multimeter	8	CO5

Integral University, Lucknow

Effective from Session:2026-27 (NEP)

Course Code	CS152	Title of the Course	Secure Programming & Python for AI	L	T	P	C
Year	1 st	Semester	2 nd	4	0	2	5
Pre-Requisite	Basic Computer Knowledge	Co-requisite					
Course Objectives	• Understand secure coding practices and common vulnerabilities. • Develop Python programs for security automation. • Apply cryptographic techniques for secure applications. • Implement secure development practices using DevSecOps. • Build AI-based security and threat detection systems.						

Course Outcomes

CO1	State the fundamental concepts of secure coding, OWASP Top 10 vulnerabilities, Python programming basics, and DevSecOps principles.
CO2	Explain the use of Python for secure file operations, network communication using sockets, and automation tasks such as log analysis and alert generation.
CO3	Apply data preprocessing and exploratory data analysis techniques and analyze datasets to identify patterns, correlations, and anomalies through feature engineering and statistical methods.
CO4	Apply secure coding practices, code review techniques, and analyze software components, APIs, and CI/CD pipelines to detect security flaws and ensure the integration of secure DevSecOps practices.
CO5	Apply machine learning techniques for intrusion detection and develop Python-based solutions for threat intelligence analysis, malware detection, and automated security incident response.

THEORY

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Secure Coding Fundamentals	• Secure Coding Principles: input validation, least privilege, and fail-safe defaults • OWASP Top 10 vulnerabilities: Injection, Broken Access Control, Security Misconfiguration, XSS, and others • Secure SDLC: integrating security at each phase — Requirements, Design, Implementation, Testing, Deployment • Vulnerability Assessment: identifying and scoring vulnerabilities using CVSS • Common coding flaws: SQL Injection, Buffer Overflow, Path Traversal, and insecure error handling	8	CO1
2	Python Programming for Security	• Python basics for security: data types, control flow, functions, and exception handling • File handling: reading and writing files securely, managing permissions • Network programming: socket library for TCP/UDP communication and port scanning • Automation scripts: log analysis, scheduled scanning, and alerting using Python • HTTP scripting with the request's library: web interaction and response parsing	8	CO2
3	Python for AI	• NumPy: arrays, array operations, slicing, and numerical data processing • Pandas: DataFrames, data loading, filtering, grouping, and aggregation • Data Preprocessing: handling missing values, encoding, normalisation, and cleaning • Exploratory Data Analysis (EDA): descriptive statistics and data visualisation • Feature engineering: creating and selecting relevant features for AI/ML models	8	CO3
4	DevSecOps & Secure Development	• DevSecOps Fundamentals: integrating security into CI/CD pipelines • Code Review Techniques: identifying logic flaws, hardcoded credentials, and insecure patterns • Static Analysis: using tools like Bandit to scan Python code for vulnerabilities • Secure API Development: input validation, authentication (JWT), and HTTPS enforcement • Dependency management: auditing third-party libraries for known CVEs	8	CO4
5	AI-Based Security & Threat Intelligence	• Machine Learning for Intrusion Detection: supervised classification on network traffic datasets • Anomaly Detection: identifying unusual patterns using unsupervised ML techniques • Threat Intelligence & Analysis: IOCs, threat feeds, and OSINT collection • Malware Analysis using Python: static analysis, string extraction, and YARA rule matching • Security Incident Response Automation: Python scripts for alert triage and evidence collection	8	CO5

PRACTICAL

S.No.	List of Experiments	Contact Hrs.	Mapped CO
1	Identify and fix at least five OWASP Top 10 vulnerabilities (SQL injection, XSS, insecure deserialization, etc.) in a	2	CO1

	provided vulnerable Python web application. Document each vulnerability, its risk, and the fix applied.		
2	Write a Python script that performs static code analysis on a given source file. Detect common insecure patterns (hardcoded passwords, use of eval(), unvalidated inputs) and generate a vulnerability report.	2	CO1
3	Develop a Python script to automate network reconnaissance: scan a target IP range using the socket library, identify open ports, and log results to a structured JSON report file.	2	CO2
4	Write a Python automation script that monitors a log file in real time, detects repeated failed login attempts (brute force pattern), and automatically blocks the offending IP by updating a firewall rules file.	2	CO2
5	Implement AES-256 encryption and decryption for files using the Python cryptography library. Demonstrate encrypting a sensitive text file and securely decrypting it back. Compare with DES and discuss why AES is preferred.	2	CO3
6	Implement RSA public-key cryptography in Python: generate a key pair, encrypt a message with the public key, decrypt with the private key. Also implement SHA-256 hashing and demonstrate digital signature creation and verification.	2	CO3
7	Build a secure REST API in Python (Flask) applying DevSecOps principles: enforce HTTPS, implement JWT-based authentication, validate all inputs, and use SAST (Bandit) to scan the API code for vulnerabilities before deployment.	2	CO4
8	Perform a code review on a provided insecure Python application using Bandit and PyLint. Identify security weaknesses, fix them, re-scan to confirm resolution, and document the before/after security posture.	2	CO4
9	Train a Machine Learning model (Random Forest) on the NSL-KDD network intrusion dataset to classify traffic as normal or attack. Evaluate using accuracy, precision, recall, F1-score, and plot a confusion matrix.	4	CO5
10	Perform static malware analysis on sample Python-based malware scripts: extract strings, identify suspicious imports, map behaviors to MITRE ATT&CK techniques, and build a Python-based YARA rule scanner to detect the samples.	2	CO5
