Course Objectives	This Paper is designed to provide a sound knowledge of macro-economic theory. The goal of this course is to provide students with a thorough understanding of the fundamental principles of macroeconomics that establish a functional relationship between large aggregates. This course looks at the determination of income and employment, consumption function, theories of investment, multiplier, and accelerator.						

Course Outcomes

CO2	With consumer behavior models, students will interpret and evaluate utility-based approaches such as cardinal, ordinal, and revealed preference theories
CO3	Using production theory and cost analysis, students will construct and analyze isoquants, returns to scale, and cost curves to evaluate firm behavior.
CO4	Given different market structures, students will compare pricing and output decisions under perfect competition, monopolistic competition, monopoly, and oligopoly using appropriate theoretical models
CO5	Provided monopoly frameworks, students will assess the implications of monopoly pricing, social costs, and policy interventions such as antitrust laws and regulation.
CO6	Given concepts of externalities, public goods, and imperfect information, students will analyze causes of market failure and evaluate government policies for correcting them.
