

Effective from Session: 2022	2-23											
Course Code	SOIL 501	Title of the Course	Soil Physics	L	Т	Р	С					
Year	Ι	Semester	Ι	2	0	2						
Course Objectives	• To	• To gain the knowledge of physical properties and formation of soil and its properties for better crop yield										

	Course Outcomes							
CO1	To gain the knowledge of soil physical properties							
CO2	To study about the soil formation factors and processes							
CO3	To assess the importance of soil water for plant growth							
CO4	To study in detail about soil components							
CO5	To study about management of soil physical properties for better crop yield							

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Basic principles of physics applied to soils, soil as a three phase system. Soil texture, textural classes, mechanical analysis, specific surface. Soil consistence; dispersion and workability of soils; soil compaction and consolidation; soil strength; swelling and shrinkage - basic concepts. Alleviation of soil physical constraints for crop production. Soil erosion and edibility.	3	CO1, CO5
2	Unit-II	Soil structure - genesis, types, characterization and management soil structure; Soil aggregation, aggregate stability; soil tilth, characteristics of good soil tilth; soil crusting - mechanism, factors affecting and evaluation; soil conditioners; puddling, its effect on soil physical properties; clod formation. Soil water: content and potential, soil water retention, soil-water constants, measurement of soil water content, energy state of soil water, soil water potential, soil-moisture characteristic curve; hysteresis, measurement of soil-moisture potential.	8	CO2, CO5
3	Unit-III	Water flow in saturated and unsaturated soils, Poiseuille's law, Darcy's law; hydraulic conductivity, permeability and fluidity, hydraulic diffusivity; measurement of hydraulic conductivity in saturated and unsaturated soils. Infiltration; internal drainage and redistribution; evaporation; hydrologic cycle, field water balance; soil-plant-atmosphere continuum.	4	CO3, CO5
4	Unit-IV	Composition of soil air; renewal of soil air - convective flow and diffusion; measurement of soil aeration; aeration requirement for plant growth; soil air management. Modes of energy transfer in soils; energy balance; thermal properties of soil; measurement of soil temperature; soil temperature in relation to plant growth; soil temperature management.	6	CO4, CO5
Practica				
method, methods character unsatura	Measurement of Atterb , Measurement of soil ristics curve and compu- ted conditions, Determi	mass volume relationship of soil, Mechanical analysis by hydrometer and international pipette berg limits, Aggregate analysis - dry and wet, Measurement of soil-water content by different -water potential by using tensiometer and gypsum Blocks, Determination of soil-moisture atation of pore-size, distribution, Determination of hydraulic conductivity under saturated and nation of infiltration rate of soil, Determination of aeration porosity and oxygen diffusion rate, by different methods, Estimation of water balance components in bare and cropped fields.	32	CO1, CO2, CO3, CO4, CO5

Course Code	SOIL 502	Title of the Course	Soil Fertility and Fertilizer Use	L	Т	Р	С
Year	Ι	Semester	Ι	2	0	2	
Course Objectives		gain the knowledge of n duction	utrient availability, its mobility and nutrient use efficiency f	or bet	ter crop		

	Course Outcomes							
CO1	To gain the knowledge of nutrient availability							
CO2								
CO3	To assess the importance of nutrient use efficiency							
CO4	To study about soil fertility and productivity							
CO5	To study about fertilizer and manure use							

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Soil fertility and soil productivity; fertility status of major soils group of India; nutrient sources – fertilizers and manures; Criteria of essentiality, classification, law of minimum and maximum, essential plant nutrients - functions and deficiency symptoms, Nutrient uptake, nutrient interactions in soils and plants; long term effect of manures and fertilizers on soil fertility and crop productivity	8	CO1
2	Unit-II	Soil and fertilizer nitrogen – sources, forms, immobilization and mineralization, nitrification, denitrification; biological nitrogen fixation -types, mechanism, microorganisms and factors affecting; nitrogenous fertilizers and their fate in soils; management of fertilizer nitrogen in lowland and upland conditions for high fertilizer use efficiency	6	CO2
3	Unit-III	Soil and fertilizer phosphorus - forms, immobilization, mineralization, reactions in acid and alkali soils; factors affecting phosphorus availability in soils; phosphatic fertilizers - behavior in soils and management under field conditions. Potassium - forms, equilibrium in soils and its agricultural significance; mechanism of potassium fixation; management of potassium fertilizers under field conditions.	5	CO3
4	Unit-IV	Sulphur - source, forms, fertilizers and their behavior in soils; role in crops and human health; calcium and magnesium– factors affecting their availability in soils; management of sulphur, calcium and magnesium fertilizers. Micronutrients – critical limits in soils and plants; factors affecting their availability and correction of their deficiencies in plants; role of chelates in nutrient availability	5	CO4
5	Unit-V	Common soil test methods for fertilizer recommendations; quantity– intensity relationships; soil test crop response correlations and response functions. Fertilizer use efficiency; site-specific nutrient management; plant need based nutrient management; integrated nutrient management; speciality fertilizers concept, need and category. Current status of speciality fertilizers use in soils and crops of India	4	CO4, CO5
6	Unit-VI	Soil fertility evaluation - biological methods, soil, plant and tissue tests; soil quality in relation to sustainable agriculture, Determination of critical limit, DRIS. Definition and concepts of soil health and soil quality; Long term effects of fertilizers and soil quality.	4	CO5
Practica	als:			
	al analysis of soil for to	rocessing for chemical analysis; Determination of soil pH, total and organic carbon in soil; tal and available nutrients (major and micro); Analysis of plants for essential elements (major	32	CO1, CO2, CO3, CO4, CO5

Course Code	SOIL 505	Title of the Course	Soil Erosion and Conservation	L	Т	Р	С							
Year	Ι	Semester	Ι	2	0	2								
Course Objectives	• To • To	study about the types of assess the measures to b	oil and its conservation erosion be taken for controlling soil erosion to conserve soil and wat sation planning methods in different areas	er										

	Course Outcomes							
CO1	The students will get the knowledge of soil and its different types							
CO2	The students will have experience on the knowledge of soil conservation							
CO3	The students can utilize this course knowledge in research for solving field problem.							

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO				
1	Unit-I	History, distribution, identification and description of soil erosion problems in India	2	CO1				
2	Unit-II	Forms of soil erosion; effects of soil erosion and factors affecting soil erosion; types and mechanisms of water erosion; raindrops and soil erosion; rainfall erosivity-estimation as EI30 index and kinetic energy; factors affecting water erosion; empirical and quantitative estimation of water erosion; methods of measurement and prediction of runoff; soil losses in relation to soil properties and precipitation	6	CO2				
3	Wind erosion- types, mechanism and factors affecting wind erosion; extent of problem in the							
4	Unit-IV	Soil conservation planning; land capability classification; soil conservation in special problem areas such as hilly, arid and semi-arid regions, waterlogged and wet lands. Watershed management - concept, objectives and approach; water harvesting and recycling; flood control in watershed management; socio economic aspects of watershed management; case studies in respect to monitoring and evaluation of watersheds; use of remote sensing in assessment and planning of watersheds, sediment measurement	10	CO3				
Practica	als:							
clay/moi drops; C	isture equivalent ratio,	l erodibility indices - suspension percentage; dispersion ratio, erosion ratio, clay ratio, percolation ratio, raindrop erodibility index; Computation of kinetic energy of falling rain erosivity index (EI30) using rain gauge data; Land capability classification of a watershed;	14	CO1, CO2, CO3

Course Code	STAT 511	Title of the Course	Experimental Designs	L	Т	Р	С				
Year	Ι	Semester	Ι	2	0	2					
Course Objectives	To unders	To understand the basic concept and fundamentals of experimental design and its application in agriculture.									

	Course Outcomes
CO1	Students will have basic knowledge of Experiments, designs and analysis of covariance
CO2	Students will have knowledge of Comparative experiments
CO3	The students will be able to prepare their experimental fields on the basis of designs
CO4	Students can have the knowledge of completely Randomized Design, Randomized Block Design and Latin square design and their analysis of
	variance
CO5	Students can analyze their results according to the designs

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Experiments: Absolute Experiments, Comparative experiments, need for designing of experiments, characteristics of a good design. Treatment, experimental unit, blocks, yield, uniformity trials, size and shape of plots and blocks. Principles of design of experiment: randomization, replication and local control.	4	CO1
2	Unit-II	Designs of experiments: Completely Randomized Design, Randomized Block Design and Latin square design and their analysis of variance. factorial design; symmetrical and asymmetrical. Confounding in symmetrical factorial experiments, factorial experiments with control treatment, advantages and disadvantages of confounding.	6	CO2, CO3
3	Unit-III	Analysis of covariance for two-way classification (Randomized Block Design). Split plot design: comparison between split-plot design and factorial design, advantages and disadvantages of split plot design. Missing Plot techniques: Analysis of missing plot design (Fisher's Rule), analysis of Randomized Block Design with one missing observation, analysis of Latin Square Design with one missing observation.	5	CO1, CO4
4	Unit-IV	Balanced Incomplete Block Design (BIBD), parameters of BIBD, Incidence matrix, Symmetric BIBD, Analysis of BIBD, efficiency of BIBD relative to Randomized Block Design, Response Surfaces.	4	CO5
Practica	als:			
Random	nized Block Design, Lat	ormation of plots and blocks, Analysis of data obtained from Completely Randomized Design, in Square Design; Analysis of factorial experiments without and with confounding; Analysis igns; Transformation of data; Fitting of response surfaces.	22	CO1, CO2, CO3, CO4, CO5

Course Code	505	The of the Course	rechniques in Biochennisury	L	L	r	C			
Year	ear I Semester I									
	• To attain the knowledge and concept of Biomolecules.									
Course Objectives	and principles of different biochemical techniques.									
	different bioanalytical techniques.									

	Course Outcomes
CO1	Understand about the cells and apply the concept of centrifugation.
CO2	Knowledge of classification, principle and application of chromatography.
CO3	Knowledge of principle and application of electrophoresis and blotting techniques
CO4	Understand working principle of spectrophotometer and able to handle different spectrophotometric techniques
CO5	Understand the concept of microscopy and radiations.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	General scheme for purification of biocomponents. Methods of studying cells and organelles, sub cellular fractionation and marker enzymes. Methods for lysis of plant, animal and microbial cells. Ultra-filtration, sonication, freeze drying and fractional precipitation. Principles of centrifugation, concepts of RCF, different types of instruments and rotors, preparative, differential and density gradient centrifugation, analytical ultra-centrifugation, determination of molecular weights and other applications, subcellular fractionation.	6	CO1
2	Unit-II	Basic principles, instrumentation, working and applications of partition chromatography, paper, thin layer, ion exchange and affinity chromatography, gel permeation chromatography, HPLC and FPLC.	5	CO2
3	Unit-III	Electrophoretic techniques - slab, capillary, 2-D, pulse field, polyacrylamide/agarose gel electrophoresis. Blotting techniques: Western, Southern and Northern blotting- principle and methodology.	5	CO3
4	Unit-IV	Fundamental principles of flourescene & phosphorescence, absorption, transmission of light, Beer – Lamberts law, Colorimeter, flame photometry. Principle, instrumentation, working and application of – UV, visible and IR spectroscopy, atomic absorption spectrometry, Nuclear Magnetic Resonance (NMR), Mass spectroscopy - GC-MS, HPLC-MS and LC- MS/MS, Matrix-assisted laser desorption/ionization- Time-of-Flight Mass spectroscopy (MALDI-TOF MS), X-ray crystallography.	6	CO4
5	Unit-V	Basic principles, instrumentation and applications of microscopy. Bright field, phase contrast, fluorescence and confocal microscopy. Electron microscope – scanning and transmission electron microscopy. Nature of radioactivity, decay and types of radiation. Radiation hazards and precautions taken while handling radioisotopes. Radiation detection and measurements: Geiger Muller counter, scintillation counter and pulse height analyzer. Application of radioisotopes in biological science- autoradiography.	6	CO5
Practica	ds:			
absorption chromator	on coefficients; Paper ography of fatty acids;	d microbial cells; Centrifugation; Verification of Beer-Lambert's law and determination of chromatography – Separation of amino acids and carbohydrates in a mixture; Thin layer; Column chromatography – Separation of a mixture of proteins and salt using Sephadex ag of bacteria – Simple staining, differential staining, staining of spores.	48	CO1, CO2, CO3, CO4, CO5

Course Code	MCA 512	Title of the Course	Information Technology in Agriculture	L	Т	Р	С
Year	Ι	Semester	Ι	1	0	2	
Course Objectives	<ul> <li>The aim regionally</li> <li>They gain</li> <li>Type of educed to the second s</li></ul>	of improving communand worldwide				re loca	ılly,

	Course Outcomes							
CO1	Use of Information and Communication Technology in Agriculture							
CO2	Know about crop models concepts & techniques							
CO3	Know about computer models for understanding plant processes.							
CO4	Knowledge of education and their Characteristics and Agricultural Journalism							
CO5	Knowledge of contact methods. Kissan Call center and e-Chaupal.							

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Introduction and Applications of e-Agriculture, Introduction to Online Agricultural resources: Consortium for e-resources in Agriculture (CeRA), e-agriculture community, Agriculture: National Portal of India. Agricultural Datasets and Databases: Agricola, Agris. Need of Biological databases in Agricultural Sciences.	4	CO1
2	Unit-II	5	CO1, CO3	
3	Unit-III	Crop models, concepts & techniques, types of crop models, spatial data and their management in GIS; Remote sensing concepts and application in agriculture, Global positioning system (GPS), components and its functions.	5	CO2, CO3
4	Unit-IV	Agricultural Journalism – Meaning, Scope and Importance, Sources of news, Kisan call centers, e-chaupal, RRA, PRA tools and techniques KVK, Adopter categories, MANAGE, EEI: extension education institute.	4	CO3, CO4
Practica	als:			
Random	nized Block Design, Lat	formation of plots and blocks, Analysis of data obtained from Completely Randomized Design, tin Square Design; Analysis of factorial experiments without and with confounding; Analysis signs; Transformation of data; Fitting of response surfaces.	26	CO1, CO2, CO3, CO4, CO5

Course Code	PGS 504	Basic Concepts in Laboratory Techniques	L	Т	Р	С		
Year	I Semester I 0							
Course Objectives	<ul> <li>To learn the To learn</li></ul>	he use of different instru- he preparation of difference he preparation of buffers he preparation of media	of safety measures while handling instruments, chemicals, g iments, chemicals, glasswares, etc. of lab nt agrochemical doses in field and pot applications s of different strengths and pH values and methods of sterilization esting, testing of pollen viability	lassw:	ares, etc	. in lab		

	Course Outcomes
CO1	Students will have basic knowledge of handling and safety measures of instruments, chemicals, glasswares, etc. in lab before and after use
CO2	Students will have knowledge of usage of different type of lab equipments, instruments, glasswares, plasticwares, etc.
CO3	The students will be able to prepare different agrochemical doses in field and pot applications
CO4	Students can have the knowledge to prepare media, acid and bases of different strengths and buffer solutions
CO5	Students can also perform seed and pollen viability testing

Practicals:		
	Contact Hrs.	Mapped CO
Safety measures while in Lab; Handling of chemical substances; Use of burettes, pipettes, measuring cylinders, flasks, separatory funnel, condensers, micropipettes and vaccupets; Washing, drying and sterilization of glassware; Drying of solvents/ chemicals; Weighing and preparation of solutions of different strengths and their dilution; Handling techniques of solutions; Preparation of different agro-chemical doses in field and pot applications; Preparation of solutions of acids; Neutralization of acid and bases; Preparation of buffers of different strengths and pH values; Use and handling of microscope, laminar flow, vacuum pumps, viscometer, thermometer, magnetic stirrer, micro-ovens, incubators, sandbath, waterbath, oilbath; Electric wiring and earthing; Preparation of media and methods of sterilization; Seed viability testing, testing of pollen viability; Tissue culture of crop plants; Description of flowering plants in botanical terms in relation to taxonomy.	32	CO1, CO2, CO3, CO4, CO3

Course Code	SOIL 503	Title of the Course	Soil Chemistry	L	Т	Р	С		
Year	Ι	Semester	Π	2	0	2			
Course Objectives	• To	• To study earth's elemental composition and basics of physical chemistry of different types of soil							

	Course Outcomes
CO1	The students will have the knowledge about earth's elemental composition and physical chemistry
CO2	The students will understand the properties of inorganic and organic soil colloids
CO3	The students will understand the ion exchange processes in soil
CO4	The students will have the knowledge of sorption-desorption mechanisms and NPK chemistry in soil
CO5	The students will have the understand the chemistry of problematic soils

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO			
1	Unit-I	Chemical (elemental) composition of the earth's crust, soils, rocks and minerals. Elements of equilibrium thermodynamics, chemical equilibria, electrochemistry and chemical kinetics	4	CO1			
2	coagulation/flocculation and peptization of soil colloids; electrometric properties of soil colloids; sorption properties of soil colloids; soil organic matter - fractionation of soil organic matter and different fractions, Characterization of OM; clay-organic interactions						
3	3 Unit-III Ion exchange processes in soil; cation exchange- theories based on law of massaction (Kerr- Vanselow, Gapon equations, hysteresis, Jenny's concept), adsorption isotherms, Donnan- membrane equilibrium concept, clay-membrane electrodes and ionic activity measurement, thermodynamics, statistical mechanics; anion and ligand exchange- inner sphere and outer- sphere surface complex formation, fixation of oxy anions, hysteresis in sorption-desorption of oxy-anions and anions, shift of PZC on ligand exchange, AEC, CEC; experimental methods to study ion exchange phenomena and practical implications in plant nutrition						
4	Unit-IV	Potassium, phosphate and ammonium fixation in soils covering specific and non-specific sorption; precipitation-dissolution equilibria; Concept of quantity/intensity (Q/I) relationship; step and constant-rate K; management aspects. Chemistry of acid soils; active and potential acidity; lime potential, chemistry of acid soils; sub-soil acidity. Chemistry of salt-affected soils and amendments; soil pH, ECe, ESP, SAR and important relations; soil management and amendments. Chemistry and electrochemistry of submerged soils, geochemistry of micronutrients, environmental soil chemistry	5	CO4, CO5			
Practica							
soils; Au of point of humia and fulv phospha titratable	nalysis of equilibrium so of zero-charge and asso c substances; Potentiom vic acids by visible spec tte/sulphate by soil us tte/fluoride/sulphate and e acidity of an acid soil	t, measurement of pH, EC, CO, HCO, Ca, Mg, K and Na; Determination of CEC and AEC of oil solution for pH, EC, Eh by the use of Eh-pH meter and conductivity meter; Determination ociated surface charge characteristics by the serial potentiometric titration method; Extraction metric and conductometric titration of soil humic and fulvic acids; (E4/E6) ratio of soil humic trophotometric studies and the D (E4/E6) values at two pH values; Adsorption-desorption of ing simple adsorption isotherm; Construction of adsorption envelope of soils by using a ascertaining the mechanism of the ligand exchange process involved; Determination of by BaCl2-TEA method; Determination of Q/I relationship of potassium; Determination of lime uffer method; Determination of gypsum requirement of an alkali soil	26	CO1, CO2, CO3, CO4, CO5

Course Code	SOIL 506	Title of the Course	Soil Biology and Biochemistry	L	Т	Р	С		
Year	Ι	Semester	Π	2	0	2			
Course Objectives	To know	about the soil biology a the essential nutrients a about bio fertilizers	and activities in soil and biochemistry of soil						

	Course Outcomes
CO1	To learn about the soil biology
CO2	To provide knowledge various methods of enzymatic activities in soil
CO3	To know the essential micro nutrients
CO4	To learn about soil biochemistry
CO5	To study about bio fertilizers

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO					
1	Unit-1	Soil biota, soil microbial ecology, types of organisms in different soils; soil microbial biomass; microbial interactions; un-culturable soil biota.	2	CO1					
2	Unit-II	Microbiology and biochemistry of root-soil interface; phyllosphere; soil enzymes, origin, activities and importance; soil characteristics influencing growth and activity of microflora; Root rhizosphere and PGPR.	3	CO2					
3	Unit-III	Microbial transformations of nitrogen, phosphorus, sulphur, iron and manganese in soil; biochemical composition and biodegradation of soil organic matter and crop residues, microbiology and biochemistry of decomposition of carbonaceous and proteinaceous materials, cycles of important organic nutrients.	4	CO3, CO4					
4	Unit-IV	Organic wastes and their use for production of biogas and manures; biotic factors in soil development; microbial toxins in the soil. Preparation and preservation of farmyard manure, animal manures, rural and urban composts and vermicompost. Biofertilizers–definition, classification, specifications, method of production and role in crop production; FCO specifications and quality control of biofertilizers.	4	CO4, CO5					
5	Unit-V	Biological indicators of soil quality; bioremediation of contaminated soils; microbial transformations of heavy metals in soil; role of soil organisms in pedogenesis – important mechanisms and controlling factors; soil genomics and bioprospecting; soil sickness due to biological agents; xenobiotics; antibiotic production in soil.	4	CO5					
Practica	ıls:								
matter a microbia	and functional groups;	population; Soil microbial biomass carbon; Elemental composition, fractionation of organic Decomposition of organic matter in soil; Soil enzymes; Measurement of important soil nmonification, nitrification, N2 fixation, S oxidation, P solubilization and mineralization of	26	CO1, CO2, CO3, CO4, CO5

Course Code	AGRON 504	Title of the Course	Principles and Practices of Water Management	L	Т	Р	С		
Year         I         Semester         II         2         0         2									
Course Objectives	<ul><li>To teach t</li><li>To study t</li><li>Best mana</li></ul>	he students about princi the quality of irrigation	resources available for agriculture iples of water management practices water in relation to crop requirement r nature and demand of crops for water ency						

	Course Outcomes							
CO1								
CO2	Students know about principles of water management practices							
CO3	Efficient irrigation management in crop production							
CO4	Higher water use efficiency as per crop							
CO5	Reduction in water losses in crop cultivation							

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO						
1	Unit-1	Water and its role in plants; Irrigation: Definition and objectives, water resources and irrigation development in of India and concerned state, major irrigation projects, extent of area and crops irrigated in India and in different states.	2	CO1						
2	Unit-II	Field water cycle, water movement in soil and plants; transpiration; soil-water plant relationships; water absorption by plants; plant response to water stress, crop plant adaptation to moisture stress condition. Water availability and its relationship with nutrient availability and loses.	3	CO2, CO3						
3	Unit-III	Soil, plant and meteorological factors determining water needs of crops, scheduling, depth and methods of irrigation; micro irrigation systems; deficit irrigation; fertigation; management of water in controlled environments and polyhouses. Irrigation efficiency and water use efficiency.								
4	Unit-IV	Water management of crop and cropping system, Quality of irrigation water and management of saline water for irrigation water use efficiency. Crop water requirement.								
5	Unit-V	ess of soil water and plant growth; water management in problem soils, drainage airement of crops and methods of field drainage, their layout and spacing; rain water 2 C agement and its utilization for crop production.								
6	Unit-VI	Quality of irrigation water and management of saline water for irrigation, water management in problem soils. Soil moisture conservation, water harvesting, rain water management and its utilization for crop production. Hydroponics. Water management of crops under climate change scenario.	3	CO5						
Practica	als:									
techniqu Hygrosc gauge a hydrauli the wat conduct irrigatio by soil r and velo	Le; Determination of F copic Coefficient; Deter and mercury type tens ic conductivity by const ter table by auger ho ivity; Estimation of up n requirement of crops moisture depletion meth ocity-area method; Mea	ty by field method; Determination of Permanent Wilting Point by sunflower pot culture ield capacity and Permanent Wilting Point by Pressure Plate Apparatus; Determination of mination of maximum water holding capacity of soil; Measurement of matric potential using iometer; Determination of soil-moisture characteristics curves, Determination of saturated aant and falling head method; Determination of hydraulic conductivity of saturated soil below le method; Measurement of soil water diffusivity; Estimation of unsaturated hydraulic ward flux of water using tensiometer and from depth ground water table; Determination of (calculations); Determination of effective rainfall (calculations); Determination of ET of crops od; Determination of water requirements of crops; Measurement of irrigation water by volume asurement of irrigation water by measuring devices and calculation of irrigation efficiency; e by double ring infiltrometer.	34	CO1, CO2, CO3, CO4, CO5

Course Code	(e-Course)	The of the Course	Development Programmes	L	L	r	C			
Year	Ι	Semester	Π	1	0	0				
	To kno	the objective and principle of extension education								
Course Objectives	<ul> <li>To obta</li> </ul>	in idea on various deve	lopment programmes in agriculture and allied area to help fa	armers						
• To enlighten the students about the organization and functioning of agricultural research systems at nati										
	internat	ional levels, research et	hics, and rural development programmes and policies of Go	vernm	ent					

	Course Outcomes
CO1	Students capable, efficient, and self-reliant in character.
CO2	They gain knowledge to help rural families in better appreciation of SWOT in the village.
CO3	They know about to open new opportunities for developing talents and leadership of rural people.
CO4	To provide knowledge and help for better management of farms and increase incomes.
CO5	To promote better social, natural recreational intellectual and spiritual file among the people.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO					
1	Unit-1	History of agriculture in brief; Global agricultural research system: need, scope, opportunities; Role in promoting food security, reducing poverty and protecting the environment; National Agricultural Research Systems (NARS) and Regional Agricultural Research Institutions; Consultative Group on International Agricultural Research (CGIAR): International Agricultural Research Centers (IARC), partnership with NARS, role as a partner in the global agricultural research system, strengthening capacities at national and regional levels; International fellowships for scientific mobility.	5	CO1, CO2					
2	Unit-II	Research ethics: research integrity, research safety in laboratories, welfare of animals used in research, computer ethics, standards and problems in research ethics.	3	CO2, CO3					
3	Unit-III	Concept and connotations of rural development, rural development policies and strategies. Rural development programmes: Community Development Programme, Intensive Agricultural District Programme, Special group – Area Specific Programme, Integrated Rural Development Programme (IRDP) Panchayati Raj Institutions, Co-operatives, Voluntary Agencies/Non-Governmental Organizations. Critical evaluation of rural development policies and programmes. Constraints in implementation of rural policies and programmes.	5	CO3, CO4, CO5

Course Code	PGS 508	Title of the Course	AI Foundation in Agricultural Sciences	L	Т	Р	С				
Year	Π	2	0	1	3						
Course Objectives	<ul><li>Applicati</li><li>Hands-or</li></ul>	onal understanding of A on of AI in crop manag a experience with agricu on of ethical and sustain	ltural AI tools								

	Course Outcomes
CO1	To make aware about the basics of artificial intelligence
CO2	The students will be able to know about the basics of Machine learning and natural language processing
CO3	The students also get awareness about the use of AI in remote sensing and satellite image processing & interpretation
CO4	To aware the students about satellite images in weather monitoring and forecasting and precision agriculture

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	<b>Introduction to artificial intelligence</b> : History and evolution of AI, comparison of human and computer skill, Component of AI, Scope and significance in different domains, Ethical considerations in AI development and deployment, Intelligent Agent, logical agent. <b>Problem solving through AI</b> : Defining problem as a state space search, analyzing the problem, solving problem by searching, informed search and Uninformed Search.	8	CO1
2	Unit-II	Machine Learning Basics: Neural networks and deep learning, Supervised and unsupervised learning, Feature selection and engineering, learning from observation, knowledge in learning. Natural Language Processing: Brief history of NLP, Text processing, Sentiment analysis, language translation, Early NLP system, ELIZA system, LUNAR system, General NLP system.	8	CO2
3	Unit-III	<ul> <li>Remote Sensing in Agriculture: Crop identification and monitoring, soil mapping and analysis, water management, crop health assessment, land use mapping, pest, and disease management.</li> <li>Applications of Satellite Image Processing &amp; Interpretation: Identification of crop types, assessment of crop health, crop growth monitoring &amp; development.</li> </ul>	8	CO3
4	Unit-IV	<b>Use of GIS in Weather forecasting and monitoring:</b> Risks of droughts; monitoring, prediction, and prevention of drought; drought proofing and management; modern tools including remote sensing and GIS in monitoring and combating droughts. <b>Precision Agriculture:</b> Precision livestock farming, precision beekeeping, nutrient management, yield monitors, precision viticulture, impact of industry 4.0 on the agriculture industry.	8	CO4
Practica	als:			
		op health assessment; Pest and disease management; Crop growth monitoring & development b, Weather forecasting and monitoring using GPS and GIS.	12	CO1, CO2, CO3, CO4
