

Effective from Session: 2022-23												
Course Code	VSC 501	Title of the Course	Production of Cool Season Vegetable Crops	L	Т	Р	С					
Year	Ι	Semester	Ι	2	0	2						
Course Objectives	<ul><li>Familia</li><li>Knowle</li></ul>	r with different varieties edge of commercial and	and historical knowledge of cool season vegetables of bulb s and cropping systems of different cole crops. nutritional importance, origin and distribution of different re measure in different crops			98.						

	Course Outcomes									
CC	D1	Students will be able answer about the importance, historical knowledge and production technology of bulb, tuber and cole group crops.								
CC	02	Can use the knowledge of production of root crops and leafy vegetables.								
CC	)3	By the end of course students will have the idea of production methods of different cool season crops.								

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery, sowing/ planting time and methods, hydroponics and aeroponics, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marketing), pest and disease management and production economics of Bulb and tuber crops—Onion, garlic and potato.	6	CO1, CO2, CO3
2	Unit-II	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery, sowing/ planting time and methods, hydroponics and aeroponics, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marketing), pest and disease management and production economics of Cole crops—Cabbage, cauliflower, kohlrabi, broccoli, Brussels sprouts and kale.	6	CO1, CO2, CO3
3	Unit-III	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery, sowing/ planting time and methods, hydroponics and aeroponics, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marketing), pest and disease management and production economics of Root crops—Carrot, radish, turnip and beetroot.	6	CO1, CO2, CO3
4	Unit-IV	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery, sowing/ planting time and methods, hydroponics and aeroponics, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marketing), pest and disease management and production economics of Peas and beans—Garden peas and broad bean	б	CO1, CO2, CO3
5	Unit-V	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery, sowing/ planting time and methods, hydroponics and aeroponics, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marketing), pest and disease management and production economics of Leafy vegetables—Beet leaf, fenugreek, coriander and lettuce.	6	CO1, CO2, CO3
Practica				
Demons Use of p hydropo of cropp	stration on methods of plant growth substances prics, aeroponics and ot	d seed treatment; Sowing and transplanting; Description of commercial varieties and hybrids; irrigation, fertilizers and micronutrients application; Mulching practices, weed management; s in cool season vegetable crops; Study of nutritional and physiological disorders; Studies on her soilless culture; Identification of important pest and diseases and their control; Preparation hercial farms; Visit to commercial farm, greenhouse/polyhouses; Visit to vegetable market;	28	CO1, CO2, CO3 CO4, CO5

Course Code	VSC 503	Title of the Course	Growth and Development of Vegetable Crops	L	Т	Р	С					
Year	Ι	Semester	Ι	2	0	2						
	To know about growth and developmental requirement of different vegetable crops.											
Course Objectives	Familiar	ization with different ch	emical and methods for dormancy breakage different vegeta	ables s	eeds.							
	Knowled	lge of extrinsic factors f	or vegetable crops.									

	Course Outcomes
CO1	The students will be able to about growth and developmental requirement of different vegetable crops.
CO2	Students can use the basic knowledge of different chemical and methods for dormancy breakage different vegetables seeds.
CO3	Students are able to know about sowing time of different varieties according to temperature.
CO4	Students will be able to various physiological conditions of different fruits and changes that occur during physiological changes associated with ripening.
C05	By the and of course students will be able to answer about growth and development of vegetable crops

	CO5	By the end of course s	students will be able to answ	er about growth and development of vegetable of	crops.

Course Code	STAT 511	Title of the Course	Experimental Designs	L	Т	Р	С
Year	Ι	Semester	Ι	2	0	2	
Course Objectives	To unders	tand the basic concept a	nd fundamentals of experimental design and its application	in agri	culture.		

	Course Outcomes
CO1	Students will have basic knowledge of Experiments, designs and analysis of covariance
CO2	Students will have knowledge of Comparative experiments
CO3	The students will be able to prepare their experimental fields on the basis of designs
CO4	Students can have the knowledge of completely Randomized Design, Randomized Block Design and Latin square design and their analysis of
	variance
CO5	Students can analyze their results according to the designs

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Experiments: Absolute Experiments, Comparative experiments, need for designing of experiments, characteristics of a good design. Treatment, experimental unit, blocks, yield, uniformity trials, size and shape of plots and blocks. Principles of design of experiment: randomization, replication and local control.	4	CO1
2	Unit-II	Designs of experiments: Completely Randomized Design, Randomized Block Design and Latin square design and their analysis of variance. factorial design; symmetrical and asymmetrical. Confounding in symmetrical factorial experiments, factorial experiments with control treatment, advantages and disadvantages of confounding.	6	CO2, CO3
3	Unit-III	Analysis of covariance for two-way classification (Randomized Block Design). Split plot design: comparison between split-plot design and factorial design, advantages and disadvantages of split plot design. Missing Plot techniques: Analysis of missing plot design (Fisher's Rule), analysis of Randomized Block Design with one missing observation, analysis of Latin Square Design with one missing observation.	5	CO1, CO4
4	Unit-IV	Balanced Incomplete Block Design (BIBD), parameters of BIBD, Incidence matrix, Symmetric BIBD, Analysis of BIBD, efficiency of BIBD relative to Randomized Block Design, Response Surfaces.	4	CO5
Practica	als:			
Random	nized Block Design, Lat	ormation of plots and blocks, Analysis of data obtained from Completely Randomized Design, in Square Design; Analysis of factorial experiments without and with confounding; Analysis igns; Transformation of data; Fitting of response surfaces.	22	CO1, CO2, CO3, CO4, CO5

Course Code	BIOCHEM 505	Title of the Course	Techniques in Biochemistry	L	Т	Р	С
Year	Ι	Semester	Ι	2	0	4	
Course Objectives	<ul> <li>To unders</li> </ul>	-	ept of Biomolecules. and principles of different biochemical techniques. different bioanalytical techniques.				

	Course Outcomes
CO1	Understand about the cells and apply the concept of centrifugation.
CO2	Knowledge of classification, principle and application of chromatography.
CO3	Knowledge of principle and application of electrophoresis and blotting techniques
CO4	Understand working principle of spectrophotometer and able to handle different spectrophotometric techniques
CO5	Understand the concept of microscopy and radiations.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	General scheme for purification of biocomponents. Methods of studying cells and organelles, sub cellular fractionation and marker enzymes. Methods for lysis of plant, animal and microbial cells. Ultra-filtration, sonication, freeze drying and fractional precipitation. Principles of centrifugation, concepts of RCF, different types of instruments and rotors, preparative, differential and density gradient centrifugation, analytical ultra-centrifugation, determination of molecular weights and other applications, subcellular fractionation.	6	CO1
2	Unit-II	Basic principles, instrumentation, working and applications of partition chromatography, paper, thin layer, ion exchange and affinity chromatography, gel permeation chromatography, HPLC and FPLC.	5	CO2
3	Unit-III	Electrophoretic techniques - slab, capillary, 2-D, pulse field, polyacrylamide/agarose gel electrophoresis. Blotting techniques: Western, Southern and Northern blotting- principle and methodology.	5	CO3
4	Unit-IV	Fundamental principles of flourescene & phosphorescence, absorption, transmission of light, Beer – Lamberts law, Colorimeter, flame photometry. Principle, instrumentation, working and application of – UV, visible and IR spectroscopy, atomic absorption spectrometry, Nuclear Magnetic Resonance (NMR), Mass spectroscopy - GC-MS, HPLC-MS and LC- MS/MS, Matrix-assisted laser desorption/ionization- Time-of-Flight Mass spectroscopy (MALDI-TOF MS), X-ray crystallography.	6	CO4
5	Unit-V	Basic principles, instrumentation and applications of microscopy. Bright field, phase contrast, fluorescence and confocal microscopy. Electron microscope – scanning and transmission electron microscopy. Nature of radioactivity, decay and types of radiation. Radiation hazards and precautions taken while handling radioisotopes. Radiation detection and measurements: Geiger Muller counter, scintillation counter and pulse height analyzer. Application of radioisotopes in biological science- autoradiography.	4	CO5
Practica	als:			
absorpti chromat	on coefficients; Paper tography of fatty acids	d microbial cells; Centrifugation; Verification of Beer-Lambert's law and determination of chromatography – Separation of amino acids and carbohydrates in a mixture; Thin layer ; Column chromatography – Separation of a mixture of proteins and salt using Sephadex ng of bacteria – Simple staining, differential staining, staining of spores.	26	CO1, CO2, CO3, CO4, CO5

Course Code	PGS 504	Title of the Course	Basic Concepts in Laboratory Techniques	L	Т	Р	С
Year	Ι	Semester	Ι	0	0	2	
Course Objectives	<ul><li>To learn the</li><li>To learn the</li><li>To learn the</li></ul>	ne use of different instru- ne preparation of differe ne preparation of buffere	of safety measures while handling instruments, chemicals, g iments, chemicals, glasswares, etc. of lab ent agrochemical doses in field and pot applications s of different strengths and pH values and methods of sterilization	glasswa	ares, etc	. in lab	
	• To unders	tand the seed viability to	esting, testing of pollen viability				

	Course Outcomes
CO1	Students will have basic knowledge of handling and safety measures of instruments, chemicals, glasswares, etc. in lab before and after use
CO2	Students will have knowledge of usage of different type of lab equipments, instruments, glasswares, plasticwares, etc.
CO3	The students will be able to prepare different agrochemical doses in field and pot applications
CO4	Students can have the knowledge to prepare media, acid and bases of different strengths and buffer solutions
CO5	Students can also perform seed and pollen viability testing

Practicals:		
	Contact Hrs.	Mapped CO
Safety measures while in Lab; Handling of chemical substances; Use of burettes, pipettes, measuring cylinders, flasks, separatory funnel, condensers, micropipettes and vaccupets; Washing, drying and sterilization of glassware; Drying of solvents/ chemicals; Weighing and preparation of solutions of different strengths and their dilution; Handling techniques of solutions; Preparation of different agro-chemical doses in field and pot applications; Preparation of solutions of acids; Neutralization of acid and bases; Preparation of buffers of different strengths and pH values; Use and handling of microscope, laminar flow, vacuum pumps, viscometer, thermometer, magnetic stirrer, micro-ovens, incubators, sandbath, waterbath, oilbath; Electric wiring and earthing; Preparation of media and methods of sterilization; Seed viability testing, testing of pollen viability; Tissue culture of crop plants; Description of flowering plants in botanical terms in relation to taxonomy.	32	CO1, CO2, CO3, CO4, CO5

Course Code	VSC 502	Title of the Course	Production of Warm Season Vegetable Crops	L	Т	Р	С
Year	Ι	Semester	Π	2	0	2	
Course Objectives	• To imp warm s	art comprehensive knov eason	and historical knowledge of warm season vegetables of tube vledge about the scientific production technology of vegetab neasure in different crops		-		1

	Course Outcomes
CO1	To impart basic knowledge about the importance and management of warm season vegetables grown in India
CO2	Impart knowledge of varietal importance to improve the production and quality of vegetables
CO3	By the end of course students will have the idea of production methods of different warm season crops
CO4	Calculate the agro-chemical doses to control biotic stresses
CO5	Understand the package of practices of crops Identify and control of important physiological disorders

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery including grafting technique, sowing/ planting time and methods, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices namely hydroponics, aeroponics, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marking), pest and disease management and economics of crops in: Fruit vegetables—Tomato, brinjal, hot pepper, sweet pepper and okra.	б	CO1, CO2, CO3, CO4, CO5
2	Unit-II	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery including grafting technique, sowing/ planting time and methods, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices namely hydroponics, aeroponics, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marking), pest and disease management and economics of crops in: Beans—French bean, Indian bean (Sem), cluster bean and cowpea.	6	CO1, CO2, CO3, CO4, CO5
3	Unit-III	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery including grafting technique, sowing/ planting time and methods, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices namely hydroponics, aeroponics, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marking), pest and disease management and economics of crops in: Cucurbits—Cucumber, melons, gourds, pumpkin and squashes.	6	CO1, CO2, CO3, CO4, CO5
4	Unit-IV	Introduction, commercial and nutritional importance, origin and distribution, botany and taxonomy, area, production, productivity and constraints, soil requirements, climatic factors for yield and quality, commercial varieties/ hybrids, seed rate and seed treatment, raising of nursery including grafting technique, sowing/ planting time and methods, precision farming, cropping system, nutritional including micronutrients and irrigation requirements, intercultural operations, special horticultural practices namely hydroponics, aeroponics, weed control, mulching, role of plant growth regulators, physiological disorders, maturity indices, harvesting, yield, post-harvest management (grading, packaging and marking), pest and disease management and economics of crops in: Tuber crops—Sweet potato, elephant foot yam, tapioca, taro and yam.	6	CO1, CO2, CO3, CO4, CO5

Image: Specific content in the field of the course of the cour		n													

	Course Outcomes
CO1	To able to about growth and developmental requirement of different vegetable crops.
CO2	To familiarize the students with general knowledge of botany and crop plants
CO3	To impart theoretical knowledge and practical skills about plant breeding objectives.
CO4	To learn modes of reproduction and genetic consequences, breeding methods for crop improvement.
CO5	To conceptualize about different aspects of plant breeding, hybrid vigour and release of variety

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Importance and history- Importance, history and evolutionary aspects of vegetable breeding and its variation from cereal crop breeding.	5	CO1
2	Unit-II	Selection procedures- Techniques of selfing and crossing; Breeding systems and methods; Selection procedures and hybridization; Genetic architecture; Breeding for biotic stress (diseases, insect pests and nematode), abiotic stress (temperature, moisture and salt) resistance and quality improvement; Breeding for water use efficiency (WUE) and nutrients use efficiency (NUE).	7	CO2, CO3, CO4
3	Unit-III	Heterosis breeding- Types, mechanisms and basis of heterosis, facilitating mechanisms like male sterility, self-incompatibility and sex forms.	5	CO2, CO3, CO4
4	Unit-IV	Mutation and Polyploidy breeding; Improvement of asexually propagated vegetable crops and vegetables suitable for protected environment.	6	CO3, CO4, CO5
5	Unit-V	Ideotype breeding- Ideotype breeding; varietal release procedure; DUS testing in vegetable crops; Application of In-vitro and molecular techniques in vegetable improvement.	6	CO3, CO4, CO5
Practica	als:			
viz., Co	ole crops, okra, cucurbi	behaviour of different vegetables; Techniques of selfing and crossing of different vegetables ts, tomato, eggplant, hot pepper, etc.; Breeding system and handling of filial generations of to biotechnological lab practices; Visit to breeding farms.	16	CO1, CO2, CO3, CO4, CO5

Effective from Session: 2022	2-23												
Course Code	VSC 507	7     Title of the Course     Protected Cultivation of Vegetable Crops     L     T     P       Semester     II     2     0     2       Inderstanding the principle, theoretical aspects and developing skills in protected cultivation of horticultural croption     1     1											
Year	I Semester		II	2	0	2							
Course Objectives			eoretical aspects and developing skills in protected cultivation egetable crops and their evolution.	on of l	norticul	tural cro	ops.						

	Course Outcomes
CO1	Able to know what is the significance of systematics and crop diversity in vegetable crops
CO2	To acquaint with green house technology, types of greenhouses; plant response to greenhouse environment
CO3	Study of different type of greenhouses based on shape.
CO4	Determine the rate of air exchange in an active summer winter cooling system.
CO5	Determination of drying rate of agricultural products inside green house.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Scope and importance- Concept, scope and importance of protected cultivation of vegetable crops; Principles, design, orientation of structure, low and high-cost polyhouses/greenhouse structures.	5	CO1, CO2,
2	Unit-II	Types of protected structure- Classification and types of protected structures greenhouse/polyhouses, plastic-non plastic low tunnels, plastic walk-in tunnels, high roof tunnels with ventilation, insect proof net houses, shed net houses, rain shelters, NVP, climate control greenhouses, hydroponics and aeroponics; Soil and soilless media for bed preparation; Design and installation of drip irrigation and fertigation system.	7	CO2, CO3
3	Unit-III	Abiotic factors- Effect of environmental factors and manipulation of temperature, light, carbon dioxide, humidity, etc. on growth and yield of different vegetables.	6	CO3, CO4
4	Unit-IV	Nursery raising- High tech vegetable nursery raising in protected structures using plugs and portrays, different media for growing nursery under protected cultivation; Nursery problems and management technologies including fertigation.	6	CO4, CO5
5	Unit-V	Cultivation of crops- Regulation of flowering and fruiting in vegetable crops; Technology for raising tomato, sweet pepper, cucumber and other vegetables in protected structures, including varieties and hybrids, training, pruning and staking in growing vegetables under protected structures.	7	CO5
	Unit-VI	Solutions to problems- Problems of growing vegetables in protected structures and their remedies, physiological disorders, insect and disease management in protected structures; Use of protected structures for seed production; Economics of greenhouse crop production.	6	CO5
Practica	als:			
Study o manage structur	f different types of grow ment under protected s	ected structure; Study of different methods to control temperature, carbon dioxide and light; ving media, training and pruning systems in greenhouse crops; Study of fertigation and nutrient tructures; Study of insect pests and diseases in greenhouse and its control; Use of protected action of vegetables; Economics of protected cultivation (Any one crop); Visit to established uses in the region.	16	CO1, CO2, CO3, CO4, CO5

Course Code	FSC 502	Title of the Course	Sub-Tropical and Temperate Fruit Production	L	Т	Р	С
Year	Ι	Semester	Π	2	0	2	
Course Objectives	<ul> <li>Knowle fruit cro</li> <li>Familia</li> </ul>	edge about different spe ops r the students about trai	major species and varieties of Sub Tropical and Temperate ecies, rootstock and different methods propagation of Sub ning, pruning and nutrient management of fruit crops ological disorders of fruit crops		-	Tempe	rate

	Course Outcomes
CO1	To make aware about different species, Rootstock and varieties of fruit crops.
CO2	The students will be able to know about different types of propagation methods
CO3	The students also get awareness about the flowering physiology of fruit crops
CO4	To aware the students about the different methods of crop regulation
CO5	To familiarize with the methods of training and pruning.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-I	Importance and Background: Origin, distribution and importance, major species, rootstocks and commercial varieties of regional, national and international importance, eco- physiological requirements for Crops Citrus, Grapes, Litchi, Pomegranate, Apple, Pear, Peach, Plum, Apricot, Cherries, Berries, Persimmon, Kiwifruit, Nuts- Walnut, Almond, Pecan, etc.	8	C01
2	Unit-II	Propagation, Planting and Orchard Floor Management: Propagation, planting systems and densities, training and pruning, rejuvenation and replanting, intercropping, nutrient management, water management, fertigation, use of bio-fertilizers, role of bio-regulators, abiotic factors limiting fruit production for Crops Citrus, Grapes, Litchi, Pomegranate, Apple, Pear, Peach, Plum, Apricot, Cherries, Berries, Persimmon, Kiwifruit, Nuts- Walnut, Almond, Pecan, etc.	10	CO2, CO4
3	Unit-III	Flowering, Fruit-Set and Harvesting: Physiology of flowering, pollination management, fruit set and development, physiological disorders – causes and remedies, crop regulation, quality improvement by management practices; maturity indices, harvesting, grading, packing, storage and ripening techniques; insect and disease management for Crops Citrus, Grapes, Litchi, Pomegranate, Apple, Pear, Peach, Plum, Apricot, Cherries, Berries, Persimmon, Kiwifruit, Nuts- Walnut, Almond, Pecan, etc.	11	CO3, CO4, CO5
Practica	als:			
pruning; malady	; Hands on practices on diagnosis; Physico-chem	cal fruit species, cultivars and rootstocks; Demonstration of planting systems, training and pollination and crop regulation; Leaf sampling and nutrient analysis; Physiological disorders- mical analysis of fruit quality attributes; Field/Exposure visits to subtropical and temperate establishing commercial orchards.	14	CO1, CO2, CO3, CO4, CO5

Course Code	PGS 505	Title of the Course	Agricultural Research, Research Ethics and Rural	L	Т	Р	C				
Course Code	(e-Course)	The of the Course	Development Programmes				C				
Year	Ι	Semester	Π	1	0	0					
	• To know the objective and principle of extension education										
Course Objectives	<ul> <li>To obtain idea on various development programmes in agriculture and allied area to help farmers.</li> </ul>										
Course Objectives	• To enlighten the students about the organization and functioning of agricultural research systems										
	international levels, research ethics, and rural development programmes and policies of Government										

	Course Outcomes										
CO1	Students capable, efficient, and self-reliant in character.										
CO2	They gain knowledge to help rural families in better appreciation of SWOT in the village.										
CO3	They know about to open new opportunities for developing talents and leadership of rural people.										
CO4	To provide knowledge and help for better management of farms and increase incomes.										
CO5	To promote better social, natural recreational intellectual and spiritual file among the people.										

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Unit-1	History of agriculture in brief; Global agricultural research system: need, scope, opportunities; Role in promoting food security, reducing poverty and protecting the environment; National Agricultural Research Systems (NARS) and Regional Agricultural Research Institutions; Consultative Group on International Agricultural Research (CGIAR): International Agricultural Research Centers (IARC), partnership with NARS, role as a partner in the global agricultural research system, strengthening capacities at national and regional levels; International fellowships for scientific mobility.	5	CO1, CO2
2	Unit-II	3	CO2, CO3	
3	Unit-III	Concept and connotations of rural development, rural development policies and strategies. Rural development programmes: Community Development Programme, Intensive Agricultural District Programme, Special group – Area Specific Programme, Integrated Rural Development Programme (IRDP) Panchayati Raj Institutions, Co-operatives, Voluntary Agencies/Non-Governmental Organizations. Critical evaluation of rural development policies and programmes. Constraints in implementation of rural policies and programmes.	5	CO3, CO4, CO5
