Course	Objectives			ils and key knowledge of Differential Calculus ble to explore subject into their respective dime		0	Calcul	us.				
Course Outcomes												
CO1	The students will be able to know about Indian Ancient Mathematics and Mathematicians. The students also will be able to know about sequences and their convergences/divergences.											
CO2	theorem e.g. intermediate	Borel's theorem, boundedness	theorem, Bolzano's theorem, Lagrange and Cauchy Mear	of function of single variable. Also, they will b n, Intermediate value theorem, extreme value a value theorems, Leibnitz theorem, Maclaurin'	theo	rem, I	Darbo	ux's				
CO3		e		Curvature, Envelops and evolutes. They will be	e able	o trace	e					
<ul> <li>tracing of curves in Cartesian and Polar forms.</li> <li>CO4 The students will be able to solve finite integrals as limit of the sum, Riemann integral, Fundamental theorem of integral calculus, Mean value theorems of integral calculus, Also they will be able to find Volumes and Surfaces of Solid of revolution, Pappus theorem, Multiple integrals.</li> </ul>												
CO5		will be able to solve/find Vecto ation, Theorems of Gauss, Gree		ivergence and Curl, Normal on a surface, Direc	tional	Deriv	ative,					

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1		Indian Ancient Mathematics and Mathematicians: Aryabhatt, Brahmagupt, Mahavir Acharya, Varahmihir, Bhaskaracharaya, Madhavan, Parmeshvaran, Baudhayana Definition of a sequence, theorems on limits of sequences, bounded and monotonic sequences, Cauchy's convergence criterion, Cauchy sequence, limit superior and limit inferior of a sequence, subsequence, Series of non-negative terms, convergence and divergence, Comparison tests, Cauchy's integral test, Ratio tests, Root test, Raabe's logarithmic test, de Morgan and Bertrand's tests, alternating series, Leibnitz's theorem, absolute and conditional convergence.	9	1
2		Limit, continuity and differentiability of function of single variable, Cauchy's definition, Heine's definition, equivalence of definition of Cauchy and Heine, Uniform continuity, Borel'stheorem, boundedness theorem, Bolzano's theorem, Intermediate value theorem, extreme valuetheorem, Darboux's intermediate value theorem for derivatives, Chain rule, indeterminate forms.	7	2
3		Rolle's theorem, Lagrange and Cauchy Mean value theorems, mean value theorems of higher order, Taylor's theorem with various forms of remainders, Successive differentiation, Leibnitz theorem, Maclaurin's and Taylor's series, Partial differentiation, Euler's theorem on homogeneous function.	7	2
4		Tangent and normals, Asymptotes, Curvature, Envelops and evolutes, Tests for concavity and convexity, Points of inflexion, Multiple points, Parametric representation of curves and tracing of parametric curves, Tracing of curves in Cartesian and Polar forms.	7	3
5		Definite integrals as limit of the sum, Riemann integral, Integrability of continuous and monotonic functions, Fundamental theorem of integral calculus, Mean value theorems of integral calculus, Differentiation under the sign of Integration.	9	4
6		Improper integrals, their classification and convergence, Comparison test, µ-test, Abel's test, Dirichlet's test, quotient test, Beta and Gamma functions.	7	4
7		Rectification, Volumes and Surfaces of Solid of revolution, Pappus theorem, Multiple integrals, change of order of double integration, Dirichlet's theorem, Liouville's theorem for multiple integrals.	7	5
8		Vector Differentiation, Gradient, Divergence and Curl, Normal on a surface, Directional Derivative, Vector Integration, Theorems of Gauss, Green, Stokes and related problems.	7	5

Year	First	Semester	First	4	0	0	4
Pre-Requisite	10+2 with Physics	Co-requisite					
Course Objectives	Mechanics. At the end		nce in the methods and techniques of mathematical ents are expected to have hands on experience in m ance.				

 Course Outcomes

 CO1
 Recognize the difference between types of scalars and vectors, pseudo-scalars and understand the physical interpretation of gradient, divergence and curl.

 CO2
 Comprehend the difference and connection between different coordinate systems and know the meaning of 4-vectors, Kronecker delta and Epsilon (Levi Civita) tensors.

 CO3
 Study the origin of pseudo forces in rotating frame and study the response of the classical systems to external forces and their elastic deformation.

 CO4
 Understand the dynamics of planetary motion and the working of Global Positioning System (GPS).

 CO5
 Comprehend the different features of Simple Harmonic Motion (SHM) and wave propagation.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Vector Algebra	Coordinate rotation, reflection and inversion as the basis for defining scalars, vectors, pseudo- scalars and pseudo-vectors (include physical examples). Component form in 2D and 3D. Geometrical and physical interpretation of addition, subtraction, dot product, wedge product, cross product and triple product of vectors. Position, separation and displacement vectors.	7	CO1
2	Vector Calculus	Geometrical and physical interpretation of vector differentiation, Gradient, Divergence and Curl and their significance. Vector integration, Line, Surface (flux) and Volume integrals of vector fields. Gradient theorem, Gauss-divergence theorem, Stoke-curl theorem, Greens theorem and Helmholtz theorem (statement only). Introduction to Dirac delta function.	8	CO2
3	Coordinate Systems	2D and 3D Cartesian, Spherical and Cylindrical coordinate systems, basis vectors, transformation equations. Expressions for displacement vector, arc length, area element, volume element, gradient, divergence and curl in different coordinate systems. Components of velocity and acceleration in different coordinate systems. Examples of non-inertial coordinate system and pseudo-acceleration.	8	CO3
4	Introduction to Tensors	Principle of invariance of physical laws w.r.t. different coordinate systems as the basis for defining tensors. Coordinate transformations for general spaces of nD, contravariant, covariant and mixed tensors and their ranks, 4-vectors. Index notation and summation convention. Symmetric and skew-symmetric tensors. Invariant tensors, Kronecker delta and Epsilon (Levi Civita) tensors. Examples of tensors in physics	7	CO4
5	Dynamics of a System of Particles	Review of historical development of mechanics up to Newton. Background, statement and critical analysis of Newton's axioms of motion. Dynamics of a system of particles, centre of mass motion, and conservation laws and their deductions. Rotating frames of reference, general derivation of origin of pseudo forces (Euler, Coriolis and centrifugal) in rotating frame, and effects of Coriolis force.	8	CO5
6	Dynamics of a Rigid Body	Angular momentum, Torque, Rotational energy and the inertia tensor. Rotational inertia for simple bodies (ring, disk, rod, solid and hollow sphere, solid and hollow cylinder, rectangular lamina). The combined translational and rotational motion of a rigid body on horizontal and inclined planes. Elasticity, relations between elastic constants, bending of beam and torsion of cylinder.	8	CO6
7	Motion of Planets and Satellites	Two particle central force problem, reduced mass, relative and centre of mass motion. Newton's law of gravitation, gravitational field and gravitational potential. Kepler's laws of planetary motion and their deductions. Motions of geo-synchronous and geo-stationary satellites and basic idea of Global Positioning System (GPS).	7	CO7
8	Wave Motion	Differential equation of simple harmonic motion and its solution, use of complex notation, damped and forced oscillations, Quality factor. Composition of simple harmonic motion, Lissajous figures. Differential equation of wave motion. Plane progressive waves in fluid media, reflection of waves and phase change, pressure and energy distribution. Principle of superposition of waves, stationary waves, phase and group velocity.	7	CO8

Course Objectives	will demonstrate prog	rams using simple Python s	to simple computational problems using Pythol tatements, expression, conditional statement, py and packages in python used for solving problem	thon d			

	Course Outcomes									
CO1	Understand hardware components of computer system such as memory system organization, input/output devices, aware of software									
	components of computer system, and windows operating system concepts.									
CO2	<b>O2</b> Develops basic understanding of computers, the concept of algorithm and algorithmicthinking.									
CO3	Develops the ability to analyze a problem, develop an algorithm to solve it.									
CO4	Develops the use of the Python programming language to implement various algorithms, and develops the basic concepts and terminology									
	of programming in general.									
CO5	Introduces more advanced features of the Python language.

Course Code	B030102P/MT137	Title of the Course	Practical Using Mathematica/MATLAB	L	Т	Р	C
Year	First	Semester	First	0	0	4	2
Pre-Requisite	10+2 with Mathematics	Co-requisite					
Course Objectives			the different graph and solve the differen lathematica /MATLAB /Maple /Scilab/M			ations b	У

	Course Outcomes
CO1	The students will be able to plot the different graphs of the functions: ax, $[x]$ , $x^{2n}$ , $x = e^x$ , $x^2 + 1 = e^x$ , $1 - x^2 = e^x$ , $x = \log 10(x)$ , $\cos(x) = x$ , $\sin(x) = x$ , $\cos(y) = \cos(x)$ , $\sin(y) = \sin(x)$ etc. Also they will be able to plot the graphs of polynomial of degree 2,3, 4 and 5, and their first and second derivatives and tracing of conic in Cartesian coordinates.
CO2	After completion of this course student would be able to know the convergence of sequences through plotting, verify Bolzano-Weierstrass theorem through plotting the sequence, Cauchy's root test by plotting $n^{th}$ roots and Ratio test by plotting the ratio of $n^{th}$ and $(n + 1)^{th}$ term.
CO3	Student would be able to plot Complex numbers and their representations, Operations like addition, substraction, Multiplication, Division, Modulus and Graphical representation of polar form.
CO4	Student would be able to perform following task of matrix as Addition, Multiplication, Inverse, Transpose, Determinant, Rank, Eigenvectors, Eigen values, Characteristic equation and verification of the Cayley-Hamilton theorem, Solving the systems of linear equations.
CO5	The students will be able to know about study the convergence/divergence of infinite series by plotting their sequences of partial sum.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
		Plotting the graphs of the following functions: (i) $ax$ , $[x]$ (greatest integer function), $x^{2n}$ ; $n \in N$ , $x^{2n-1}$ ; $n \in N$ , ; $n \in N$ , ; $n \in N$ ,		
1		<ul> <li> ax + b , c ±  ax + b , sin ( , xsin ( , for , e<sup>ax+b</sup>, log(ax + b) sin(ax + b), cos(ax + b),  sin(ax + b) ,  cos(ax + b) .,</li> <li>(ii) Observe and discuss the effect of changes in the real constants a and b on the graphs</li> </ul>	4	1
2		By plotting the graph find the solution of the equations $x = e^x$ , $x^2 + 1 = e^x$ , $1 - x^2 = e^x$ , $x = \log 10(x)$ , $\cos(x) = x$ , $\sin(x) = x$ , $\cos(y) = \cos(x)$ , $\sin(y) = \sin(x)$ etc	4	1
3		Plotting the graphs of polynomial of degree 2,3, 4 and 5, and their first and second derivatives.	4	1
4		Sketching parametric curves, e.g., Trochoid, Cycloid, Epicycloid and Hypocycloid etc.	4	1
5		Tracing of conic in Cartesian coordinates.	4	1
6		Graph of circular and hyperbolic functions.	4	1
7		Obtaining surface of revolution of curves	4	1
8		Complex numbers and their representations, Operations like addition, Multiplication, Division, Modulus. Graphical representation of polar form.	4	3
9		Find numbers between two real numbers and plotting of finite and infinite subset of R.	4	3
10		Matrix Operations: Addition, Multiplication, Inverse, Transpose, Determinant, Rank, Eigen vectors, Eigen values, Characteristic equation and verification of the Cayley-Hamilton theorem, Solving the systems of linear equations.	4	4
11		Study the convergence of sequences through plotting.	4	5
12		Verify Bolzano-Weierstras's theorem through plotting of sequences and hence identify convergent subsequences from the plot.	4	2
13		Study the convergence/divergence of infinite series by plotting their sequences of partial sum.	4	5
14		Cauchy's root test by plotting <i>n</i> -th roots.	4	5
15		Ratio test by plotting the ratio of $n$ -th and $(n + 1)$ -th term.	4	5

Course Objectives	The objective of this c	course understands the practical app	licability of Python.				

	Course Outcomes
CO1	To learn and understand Python programming basics.
CO2	To learn and understand python looping, control statements and string manipulations.
CO3	Students should be made familiar with the concepts of GUI controls and designing GUIapplications.
CO4	To learn and know the concepts of file handling, exception handling and databaseconnectivity.

S. No.	Title of the Experiment	Content of Experiment	Mapped CO
1	Experiment-1	Write a menu driven program to convert the given temperature from Fahrenheit to Celsius and vice versa depending upon user's choice	1
		WAP to calculate total marks, percentage and grade of a student. Marks obtained in each of the three subjects are to be input by the user. Assign grades according to the following criteria:	2
2		Grade A: Percentage >=80	
2	Experiment-2	Grade B: Percentage>=70 and <80	
		Grade C: Percentage>=60 and <70	
		Grade D: Percentage>=40 and <60	
3	Experiment-3	Grade E: Percentage<40           Write a menu-driven program, using user-defined functions to find the area of rectangle, square, circle and triangle by accepting suitable input parameters from	3
4	Experiment-4	user. WAP to display the first n terms of Fibonacci series.	3
5	Experiment-5	WAP to find factorial of the given number.	2
6	Experiment-6	WAP to find sum of the following series for n terms: 1 - 2/2! + 3/3! n/n!	2
7	<b>Experiment-7</b>	WAP to calculate the sum and product of two compatible matrices.	1
8	Experiment-8	Write a menu-driven program to create mathematical 3D objects: I. curve II. sphere III. cone IV. arrow V. ring VI. Cylinder.	4
9	Experiment-9	WAP to read n integers and display them as a histogram.	1
10	Experiment-10	WAP to display sine, cosine, polynomial and exponential curves.	2
11	Experiment-11	WAP to plot a graph of people with pulse rate p vs. height h. The values of p and h are to be entered by the user	1
12	Experiment-12	WAP to calculate the mass m in a chemical reaction. The mass m (in gms) disintegrates according to the formula $m=60/(t+2)$ , where t is the time in hours. Sketch a graph for t vs. m, where t>=0	2
13	Experiment-13	A population of 1000 bacteria is introduced into a nutrient medium. The population p grows as follows: P(t) = (15000(1+t))/(15+e) where the time t is measured in hours. WAP to determine the size of the population at given time t and plot a graph for P vs t for the specified time interval.	2
14	Experiment-14	Input initial velocity and acceleration, and plot the following graphs depicting equations of motion: I. velocity wrt time (v=u+at) II. distance wrt time (s=u*t+0.5*a*t*t) III. distance wrt velocity (s=(v*v-u*u)/2*a)	1

Course	Code	MT143/ I030103V	Title of the Course	Introduction to LaTeX	L	Т	P	C			
Year		First	Semester	First	2	0	2	3			
Pre-Reg	quisite	Basic usage of a Windows PC or a Mac	Co-requisite								
Course	Objectives	<b>bjectives</b> The course aims to teach the basic features. By attending the course students should acquire all necessary skills to be able to prepare a moderate scientific paper and a short mathematical presentation using LaTeX.									
	Course Outcomes										
CO1	Introduction of	of LaTeX, Basic commands of LaTeX,	understanding of different types of t	fonts.							
CO2	Create sectional units, texts alignment, tiles, mini pages, foot notes, new paragraph.										
CO3	Create and interpret the page layout, page style, running header, page numbering.										
CO4	Find and interpret the listing texts, numbered listing, unnumbered listing, nesting, Tabbing texts.										
CO5	Find and inter	Find and interpret the table environment, adjusting column width in tables, table wrapped by texts, footnotes in tables.									
CO6	Find and inter	rpret the command and environments of	f inserting simple figure, side by sid	e figures, figures drawing.							

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction	LaTeX, LaTeX input file, compilation, LaTeX syntax; commands, environment, packages, keyboard characters, Font selection; Text – mode fonts, Math – mode fonts, Emphasized fonts, coloured fonts.	9	1
2	Formatting Texts	Sectional units, labelling and referring numbered items, texts alignment, quoted texts, new lines and paragraph; filling blank spaces, preventing lines break, increasing depth of sectional units, titles, multiple columns, mini pages, foot notes, marginal notes.	7	2
3	Page Layout and Style	Page layout; standard page layout, formatting page layout, increasing the height of a page, page style, running header and footer, page breaking and adjustment, page numbering.	7	2
4	Listing and Tabbing Texts	Listing Texts; numbered listing, unnumbered listing, nesting, Tabbing texts; Adjusting column width, Adjusting alignment of column	7	3
5	Table Preparation	Table through tabular environment, tabular environment, vertical positioning, side ways texts, adjusting column width in tables, marging rows and columns, table wrapped by texts, table with colour background, nested tables, side by side tables, side ways table, long table, footnotes in tables.	9	5
6	Figure Insertion	Command and environments, inserting simple figure, side by side figures, sub – numbering a group of figures, figure wrapped by texts, rotated figures, mathematical notations in figures, figures in table, figures in multi – column documents, figures drawing; circle, circular arcs, straight lines, vector curves and oval boxes, texts in figures, compound figures.	7	6

Year	First	irst Semester Second 6 0 0										
Pre-Requisite	10+2 with Mathematics	2 with Mathematics Co-requisite										
Course Objectives		he purpose of this undergraduate course is to impart details and key knowledge of Matrices and Differential Equations & eometry. After successfully completion of course, the student will able to explore subject into their respective dimensions.										

	Course Outcomes
CO1	The students will be able to define types of Matrices, Rank of a Matrix, System of linear homogeneous and non-homogeneous equations,
	Theorems on consistency of a system of linear equations. Also, students will be able to find Eigen values, Eigen vectors, Cayley-Hamilton
	theorem, real and imaginary parts, Exponential and Logarithmic functions Inverse trigonometric and hyperbolic functions.
CO2	The student will be able to learn and visualize the fundamental ideas about formation of differential equations, Geometrical meaning of a
	differential equation
CO3	The students will be to learn and visualize first order higher degree equations solvable for x, y, p, Clairaut's equation and singular solutions,
	orthogonal trajectories, Linear differential equation of order greater than one with constant coefficients.
CO4	On successful completion of the course students have gained knowledge about to trace of conics, Confocal conics, Polar equation of conics
	and its properties, Three-Dimensional Coordinates system.
CO5	The student will be able to describe Sphere, Cone and Cylinder, Central conicoid, Paraboloids, lines, Confocal conicoid, Reduction of second
	degree equations.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO							
1		Types of Matrices, Elementary operations on Matrices, Rank of a Matrix, Echelon form of a Matrix, Normal form of a Matrix, Inverse of a Matrix by elementary operations, System of linear homogeneous and non-homogeneous equations, Theorems on consistency of a system of linear equations.	12	1							
2		Eigen values, Eigen vectors and characteristic equation of a matrix, Cayley-Hamilton theorem and its use in finding inverse of a matrix, Complex functions and separation into real and imaginary parts, Exponential and Logarithmic functions Inverse trigonometric and hyperbolic functions.	11	1							
3		Formation of differential equations, Geometrical meaning of a differential equation, Equation of first order and first degree, Equation in which the variables are separable, Homogeneous equations, Exact differential equations and equations reducible to the exact form, Linear equations.	11	2							
4		First order higher degree equations solvable for x, y, p, Clairaut's equation and singular solutions, orthogonal trajectories, Linear differential equation of order greater than one with constant coefficients, Cauchy-Euler form.	11	3							
5	Polar equation of conics and its properties.										
6		Three-Dimensional Coordinates, Projection and Direction Cosine, Plane (Cartesian and vector form), Straight line in three dimension (Cartesian and vector form).	11	4							
7		Sphere, Cone and Cylinder.	11	5							
8		Central conicoid, Paraboloids, Plane section of conicoid, Generating lines, Confocal conicoid, Reduction of second degree equations.	11	5

Pre-Requisite	10+2 with Physics	-2 with Physics Co-requisite									
Course Objectives	The objective of this	e objective of this undergraduate course is to impart the knowledge of basic and advance concepts of thermodynamics,									
Course Objectives	circuit fundamentals and basic electronics.										

	Course Outcomes								
CO1	Recognize the difference between reversible and irreversible processes and understand the physical significance of thermodynamical potentials.								
CO2	Comprehend the kinetic model of gases w.r.t. various gas laws.								
CO3	Study the implementations and limitations of fundamental radiation laws.								
CO4	Understand the utility of AC bridges and recognize the basic components of electronic devices.								
CO5	Design simple electronic circuits and understand the applications of various electronic instruments.								

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	0 <sup>th</sup> & 1 <sup>st</sup> Law of Thermodynami cs	State functions and terminology of thermodynamics. Zeroth law and temperature. First law, internal energy, heat and work done. Work done in various thermodynamical processes. Enthalpy, relation between CP and CV. Carnot's engine, efficiency and Carnot's theorem. Efficiency of internal combustion engines (Otto and diesel).	8	CO1
2	2 <sup>nd</sup> & 3 <sup>rd</sup> Law of Thermodynami cs	Different statements of second law, Clausius inequality, entropy and its physical significance. Entropy changes in various thermodynamical processes. Third law of thermodynamics and unattainability of absolute zero. Thermodynamical potentials, Maxwell's relations, conditions for feasibility of a process and equilibrium of a system. Clausius- Clapeyron equation, Joule- Thompson effect.	8	CO2
3	Kinetic Theory of Gases	Kinetic model and deduction of gas laws. Derivation of Maxwell's law of distribution of velocities and its experimental verification. Degrees of freedom, law of equipartition of energy (no derivation) and its application to specific heat of gases (mono, di and poly atomic).	7	CO3
4	Theory of Radiation	Blackbody radiation, spectral distribution, concept of energy density and pressure of radiation. Derivation of Planck's law, deduction of Wien's distribution law, Rayleigh-Jeans law, Stefan- Boltzmann law and Wien's displacement law from Planck's law.	7	CO4
5	DC & AC Circuits	Growth and decay of currents in RL circuit. Charging and discharging of capacitor in RC, LCand RCL circuits. Network Analysis - Superposition, Reciprocity, Thevenin's and Norton's theorems. AC Bridges - measurement of inductance (Maxwell's, Owen's and Anderson's bridges) and measurement of capacitance (Schering's, Wein's and de Sauty's bridges).	7	CO5
6	Semiconductors & Diodes	P and N type semiconductors, qualitative idea of Fermi level. Formation of depletion layer in PN junction diode, field & potential at the depletion layer. Qualitative idea of current flow mechanism in forward & reverse biased diode. Diode fabrication. PN junction diode and its characteristics, static and dynamic resistance. Principle, structure, characteristics and applications of Zener, Tunnel, Light Emitting, Point Contact and Photo diodes. Half and Full wave rectifiers, calculation of ripple factor, rectification efficiency and voltage regulation. Basic idea about filter circuits and voltage regulated power supply.	8	CO6
7	Transistors	Bipolar Junction PNP and NPN transistors. Study of CB, CE & CC configurations w.r.t. active, cutoff & saturation regions; characteristics; current, voltage & power gains; transistor currents & relations between them. Idea of base width modulation, base spreading resistance & transition time. DC Load Line analysis and Q-point stabilisation. Voltage Divider Bias circuit for CE amplifier. Qualitative discussion of RC coupled amplifier (frequency response not included).	7	CO7
8	Electronic Instrumentation	Multimeter: Principles of measurement of dc voltage, dc current, ac voltage, ac current and resistance. Specifications of a multimeter and their significance. Cathode Ray Oscilloscope: Block diagram of basic CRO. Construction of CRT, electron gun, electrostatic focusing and acceleration (no mathematical treatment). Front panel controls, special features of dual trace CRO, specifications of a CRO and their significance. Applications of CRO to study the waveform and measurement of voltage, current, frequency & phase difference.	8	CO8

Course Code	B070201T	Title of the Course	Database Management Systems	L	Т	Р	C
Year	First	Semester	Second	4	0	0	4
Pre-Requisite	NONE	Co-requisite	NONE				
Course Objectives	maintain and retrieve	efficiently and effectiv	ntroduction to database management systems, with an empha- ely – information from a DBMS. Student will understand to os and get familiar with basic database storage structures and	desig	n E-R n	nodels t	

	Course Outcomes
CO1	Understands the basic concepts of data base management systems.
CO2	Design E-R diagrams for real world applications.
CO3	Formulate relational algebraic expressions using relational data models and languages.
CO4	Apply normalization transaction properties and concurrency control to design database
CO5	Analyze the security algorithms for database protection.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction	Database System Concepts, File system vs. database system, Database system architecture, Data models and their types, Data base scheme and instances, Data independence, Database Languages and Interfaces.	7	CO1
2	Data Modeling Concepts	ER model concepts: Notations for ER diagram, Extended E-R diagram,Extended E-R model, E-R model design issues, constraints, and keys: Weak entity set strong entity set, Relationships of higher degree	8	CO2
3	Relational model concepts	Code rules, constraints, Relational Algebra operations, Extended relational algebra operations, RelationalCalculus, Tuple and Domain relational calculus	7	CO3
4	Database Design	Functional dependencies, Normal forms, First, second, and thirdnormal forms, BCNF, Multi- valued dependencies and Fourth Normal form, Join Dependencies and Fifth Normal form.	8	CO3
5	Transaction, Query Processing	Transaction and system concepts: transaction states, ACID properties of transactions, concurrent execution schedules and Recoverability, Serializability of schedules. Query Processing and Optimization: Measures of Query cost, Cost, Evaluation of expression. Optimization: Transformation of relational expression, Choice of evaluation plan.	7	CO4
6	Concurrency Control	Concurrency Control Techniques: Two phaseLocking Techniques for Concurrency Control; Time stamping in Concurrency control.	8	CO4
7	Introduction to SQL	Basic Structure of SQL Query, set operators, SELECT, UNION, INTERSECT, and EXCEPT, Nested queries, Aggregate function, Null values, Derived Relations, Modification of the Database, Joined relations and up-dates in SQL.	8	CO4
8	Database Security	Importance of data, Threats and risks, Users and database privileges, Access Control, Security for Internet Applications, Role of Database Administrator.	7	CO5

Course Code	B070202P	Title of the Course	Database Management Systems Lab	L	Т	Р	С				
Year	First	Semester	Second	0	0	4	2				
Pre-Requisite	NONE	Co-requisite	NONE								
Course Objectives	existing datab	base systems, designing	nds the practical applicability of database management syste database creating relational database, analysis of table desig ins, set operations, trigger, aggregate functions and embedde	gn. Und	lerstand						

	Course Outcomes
CO1	Understand, analyze and apply common SQL statements including DDL, DML and DCLstatements to perform different operations.
CO2	Design and implement a database schema for a given problem.
CO3	Do connectivity of PHP and MySQL to develop applications.

S. No.	Title of the Experiment	Content of Experiment	Mapped CO
1	<b>Experiment-1</b>	Creation of databases and execution of SQL queries.	1
2	Experiment-2	Creation of Tables using MySQL: Data types, Creating Tables (along with Primary and Foreign keys), Altering Tables and Dropping Tables	1
3	Experiment-3	Practicing DML commands- Insert, Select, Update, Delete.	1
4	Experiment-4	Practicing Queries using ANY, ALL, IN, EXISTS, NOT, EXISTS, UNION, INTERSECT, and CONSTRAINTS, etc.	2
5	Experiment-5	Practice Queries using COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING, VIEWS Creation andDropping	2
6	Experiment-6	Use of COMMIT, ROLLBACK and SAVEPOINT.	1
7	Experiment-7	Practicing on Triggers - creation of trigger, Insertion using trigger, Deletion using trigger, Updating usingtrigger	2
8	Experiment-8	To remove the redundancies and anomalies in the above relational tables, Normalizeup to Third Normal Form	2
9	Experiment -9	FNAME       MNIT       LNAME       SSN       BDATE       ADDRESS       SEX       SALARY       SUPERSSN       DNO         UPPARTMENT       UPPARTMENT	1
		<ol> <li>Create tables with relevant foreign key onstraints</li> <li>Populate the tables with data</li> <li>Perform the following queries on the database :         <ol> <li>Display all the details of all employees working in the company.</li> <li>Display ssn, lname, fname, address of employees who work in department no 7.</li> <li>Retrieve the birthdate and address of the employee whose name is 'Franklin T. Wong'</li> <li>Retrieve the name and salary of every employee</li> </ol> </li> </ol>	

6.Retrieve all employee names whose address is in 'Bellaire'

7.Retrieve all employees who were born during the 1950s

8. Retrieve all employees in department 5 whose salary is between 50,000 and 60,000(inclusive)

9. Retrieve the names of all employees who do not have supervisors

10.Retrieve SSN and department name for all employees

11.Retrieve the name and address of all employees who work for the 'Research' department

12. For every project located in 'Stafford', list the project number, the controlling department number, and the department manager's last name, address, and birthdate.

13. For each employee, retrieve the employee's name, and the name of his or her immediate supervisor.

14. Retrieve all combinations of Employee Name and Department Name

15. Make a list of all project numbers for projects that involve an employee whose last name is 'Narayan' either as a worker or as a manager of the department that controls the project.

16. Increase the salary of all employees working on the 'ProductX' project by 15%. Retrieve employee name and increased salary of these employees.

17. Retrieve a list of employees and the project name each works in, ordered by the employee's department, and within each department ordered alphabetically by employee first name.

18. Select the names of employees whose salary does not match with salary of any employee in department 10.

19. Retrieve the name of each employee who has a dependent with the same first name and same sex as the employee.

20. Retrieve the employee numbers of all employees who work on project located in Bellaire, Houston, or Stafford.

21. Find the sum of the salaries of all employees, the maximum salary, the minimum salary, and the average salary. Display with proper headings.

22. Find the sum of the salaries and number of employees of all employees of the 'Marketing' department, as well as the maximum salary, the minimum salary, and the average salary in this department.

23. Select the names of employees whose salary is greater than the average salary of all employees in department 10.

24. For each department, retrieve the department number, the number of employees in the department, and their average salary.

25. For each project, retrieve the project number, the project name, and the number of employees who work on that project.

26. Change the location and controlling department number for all projects having more than 5 employees to 'Bellaire' and 6 respectively.

27. For each department having more than 10 employees, retrieve the department no, no of employees drawing more than 40,000 as salary.

28. Insert a record in Project table which violates referential integrity constraint with respect to Department number. Now remove the violation by making necessary insertion in the Department table.

29. Delete all dependents of employee whose ssn is '123456789'.

30. Delete an employee from Employee table with ssn = '12345'( make sure that this employee has some dependents, is working on some project, is a manager of some department and is supervising some employees). Check and display the cascading effect on Dependent and Works on table. In Department table MGRSSN should be set to default value and in Employee table SUPERSSN should be set to NULL

31. Perform a query using alter command to drop/add field and a constraint in Employee table.
