

Course Code	PRY405	Title of the Course	HOSPITAL PHARMACY	SDG Goals	L	Т	Р	С						
Year	P.B. I	Semester	ANNUAL		3	1	4	4						
~ ~ ~ ~	1. To prepare students as he	To prepare students as health care experts with emphasis on inter-professional healthcare team bas												
Course Objectives	2. To develop the skills ir	develop the skills in monitoring of the National Health Programmes and schemes, oriented to provide preventive and												
	promotive health care service	es to the community.												
	3. To impart applied knov	vledge related to clinical	discussions, attending ward rounds, follow-up	progress	of p	atients	, case							
	presentation at discharge are	imbibed through hospital	postings.											
	4. To develop a trained clin	nical pharmacist who fund	ctions effectively as a member of a health care	team orga	nized	to deli	iver th	e						
	health and family welfare ser	vices in the existing socio	-economic environment.											
	6. To understand the clinic	cal aspects of drug develop	th and family welfare services in the existing socio-economic environment. To promote health, wellness and disease prevention by developing the rational use of drugs. To understand the clinical aspects of drug development, such as phases, ethical issues, and roles and responsibilities of clinical trial connel, design of clinical study documents, data management and safety monitoring in clinical trials.											

	Course Outcomes
CO1	Describe the organizational structure of hospital & hospital pharmacy
CO2	Understand budget and implementation of different drug policies & committees in the hospital
CO3	Appreciate various procedure for procuring and warehousing along with drug distribution methods and inventory management in the hospital
	pharmacy
CO4	Know the manufacturing practices of various formulations at hospital set-up
CO5	Develop and maintain the knowledge through continuing Professional development programs and ability in Handling and packaging of
	radiopharmaceuticals
CO6	Explain the professional relations and practices of hospital pharmacist

Unit	Title of the Unit	Content of Unit	Contact Hrs.	Mapped	SDG
No.				CO	Target
1	Hospital	Its Organization and functions. Hospital pharmacy-Organization and management. Organizational structure-Staff, Infrastructure & workload statistics. Management of materials and finance, Roles & responsibilities of hospital pharmacist	2	1	3.8, 3.d
2	The Budget	 Preparation and implementation Hospital drug policy Pharmacy and Therapeutic committee (PTC) b) Hospital formulary c) Hospital committees Infection committee Research and ethical committee d) Developing therapeutic guidelines e) Hospital pharmacy communication – Newsletter 	2	2	3.7, 3.8, 3.c, 3.d
3	Hospital pharmacy services	 a) Procurement & warehousing of drugs and Pharmaceuticals b) Inventory control Definition, various methods of Inventory Control ABC, VED, EOQ, Lead time, safety stock c) Drug distribution in the hospital i) Individual prescription method ii) Floor stock method iii) Unit dose drug distribution method d) Distribution of Narcotic and other controlled substances e) Central sterile supply services – Role of pharmacist 	2	3	3.7, 3.8, 3.a, 3.c, 3.d
4	Manufacture	 a) Sterile formulations – large and small volume parenterals b) Manufacture of Ointments, Liquids, and creams c) Manufacturing of Tablets, granules, capsules, and powders d) Total parenteral nutrition 	2	4	
5	Continuing professional development programs	Education and training Radio Pharmaceuticals – Handling and packaging	2	5	3.8, 3.9
6	Practice in Hospital	Professional Relations and practices of hospital pharmacist.	2	6	3.4, 3.7

Year	P.B. I	Semester	ANNUAL	3 GOOD HEALTH AND WELL-BEINS 	3	1	-	4
	To describe the pathophysiology	of selected disease state proach to management	s will be able to understand: es and explain the rationale for drug therapy; of these diseases including reference to the latest available evi	dence				

To discuss the preparation of individualised therapeutic plans based on diagnosis; and To identify the patient-specific parameters relevant in initiating drug therapy, and monitoring therapy (including alternatives, time-course of clinical and laboratory indices of therapeutic response and adverse effects).

	Course Outcomes
CO1	Students understand the pathophysiology & diagnosis of CVS & Respiratory system and endocrine system and their management/controversies
	including patient-specific parameters relevant in initiating drug therapy, and monitoring therapy (including alternatives, time-course of clinical
	and laboratory indices of therapeutic response and adverse effects).
CO2	Students have ability to explore the general guidelines for the management/controversies in case of children, old age patients and in
	PregnancyandbreastfeedingGlaucoma,Conjunctivitis-viral&bacterial
CO3	Students have ability to understand the rationale of essential drugs.
CO4	Students analyzed the pathophysiology & diagnosis of infectious disease and their management.
CO5	Students analyze the Pharmacotherapeutics of muscular pain management and renal disorders and also able to elucidate the Evidence Based
	Medicine.
CO6	Students analyzed the pathophysiology & diagnosis of cancer and some skin diseases.

	alternatives, time-cou	rse of clinical and labo	pratory indices of therapeutic response and adverse ef	fects)	;		

	Course Outcomes
CO1	The therapeutic approaches to the management of cardiovascular disorders, respiratory disorders, endocrine disorders, ophthalmological disorders, infectious diseases, musculoskeletal disorders, renal disorders, oncology, dermatological disorders; General prescribing guidelines for paediatric patients, geriatric patients, pregnancy and breast feeding cases, the introduction to rational drug use.
CO2	The treatment objectives for the individual patients and the diseases.
CO3	The importance of developing individualized therapeutic plans.
CO4	Prescribing guidelines for the special populations.
CO5	Patient-specific parameters for selection, initiation and monitoring of drug therapies.
CO6	Most recent updates in relevant treatment guidelines.

Course Code	PRY413		BIOPHARMACEUTICS & PHARMACOKINETICS	SDG Goals	L	Т	Р	С			
Year	P.B. I	Semester	ANNUAL	9 INCLISTICY INVOLUTION AND INFERSIBILITIES	3	1	1	3			
Course Objective	2. Pharmacokinetic parameter	1. Upon completion of the course, the candidate shall have the ability to calculate 2. Pharmacokinetic parameters from the given data, apply principles of pharmacokinetics in the design of new formulations and conduct bioavailability and bioequivalence studies.									

	Course Outcomes
CO1	Know the process of absorption, distribution, excretion and biotransformation.
CO2	Explain basic concepts of biopharmaceutics and pharmacokinetics.
CO3	Calculate Pharmacokinetic parameters from the given data.
CO4	Apply principles of pharmacokinetics in the design of new formulations.
	Conduct bioavailability and bioequivalence studies.
CO6	Applications of pharmacokinetics parameters in pharmacy practice.

Year	P.B. I	Semester	ANNUAL	-	-	3	-				
Course Objectives		pon completion of the course, the candidate shall have the ability to calculate Pharmacokinetic parameters from the given date pply principles of pharmacokinetics in the design of new formulations and conduct bioavailability and Bioequivalence studie									

	Course Outcomes								
C01	Explain basic concepts of bio pharmaceutics and pharmacokinetics								
CO2	Calculate Pharmacokinetic parameters from the given data.								
CO3	Apply principles of pharmacokinetics in the design of new formulations.								
CO4	Conduct bioavailability and bioequivalence studies.								
CO5	Applications of pharmacokinetics parameters in pharmacy practice.								

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1.	Introduction to dissolution apparatus	Improvement of dissolution characteristics of slightly soluble drugs by some methods.	3	1
2.	Introduction to buffers	Comparison of dissolution studies of two different marketed products of same Drug.	3	1
3.	Preparation of standard curve	Influence of polymorphism on solubility and dissolution.	3	5
4.	Drug release study	Protein binding studies of a highly protein bound drug and poorly protein bound Drug.	3	4
5.	Drug release study	Extent of plasma-protein binding studies on the same drug (i.e. highly and poorly protein bound drug) at different concentrations in respect of constant time.	3	4
6.	Drug release study	Bioavailability studies of some commonly used drugs on animal/human model.	3	4
7.	Calculation of Pharmacokinetics Parameters.	Calculation of Ka, Ke, t1/2, Cmax, AUC, AUMC, MRT etc. from blood profile data.	3	2
8.	Calculation of Pharmacokinetics Parameters.	Calculation of bioavailability from urinary excretion data for two drugs.	3	2
9.	Calculation of Pharmacokinetics Parameters.	Calculation of AUC and bioequivalence from the given data for two drugs.	3	2
10.	Drug absorbtion study.	In vitro absorption studies.	3	4
11.	Bio equivalency study.	Bio equivalency studies on the different drugs marketed.(eg) Tetracycline, Sulphamethoxzole, Trimethoprim, Aspirin etc., on animals and human volunteers.	3	4
12.	Absorbtion study.	Absorption studies in animal inverted intestine using various drugs.	3	4
13.	Calculation of Pharmacokinetics Parameters.	Effect on contact time on the plasma protein binding of drugs.	3	4
14.	Calculation of Pharmacokinetics Parameters.	Studying metabolic pathways for different drugs based on elimination kinetics data.	3	2
15.	Calculation of Pharmacokinetics Parameters.	Calculation of elimination half-life for different drugs by using urinary elimination Data and blood level data.	3	2
16.	Calculation of Pharmacokinetics Parameters.	Determination of renal clearance.	3	2

Course Code	PRY501	Title of the Course	CLINICAL RESEARCH	SDG Goals	L	Т	Р	С			
Year	P.B. II	Semester	ANNUAL	3 GOOD HEALTH AND WELL-BEING	3	1	0	4			
Course Objectives	 This course is designed to impart knowledge and skills necessary for contribution to Clinical research in new drug development. Chapters deal to cover briefly knowledge of Clinical trial and its documentation of new drug development This will enable the student to understand the nathway of drug in clinical trial. 										

	Course Outcomes
C01	Understand the fundamental ideas behind the drug development process, including what it is, how it varies from standard care, and why it is
	carried out.
CO2	To establish that clinical research designs and the regulatory approval process are effective.
CO3	Become familiar with the numerous regulatory documents and guidelines, and assess the most significant domestic, international, and health care
	regulatory, and product development, consequences.
CO4	Effectively manage and access the ethical aspects of clinical trial activity.
CO5	To ensure that high-quality research is conducted, become familiar with the roles and duties of the professionals involved in conducting clinical
	research.
CO6	Acknowledge the clinical trial safety monitoring and reporting processes, and regulate the trial
	Co-ordination process.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO	SDG Target
1.	Drug development process	Introduction, Various Approaches to drug discovery, Pharmacological, Toxicological, IND Application, Drug characterization, Dosage form	3	1	
2.	Clinical development of drug	Introduction to Clinical trials, Various phases of clinical trial, Methods of post marketing surveillance, Abbreviated New Drug Application submission.	3	2	3.9, 3.b
3.	Good Clinical Practice	ICH, GCP, Central drug standard control organization (CDSCO) guidelines, Challenges in the implementation of guidelines, Ethical guidelines in Clinical Research, Composition, responsibilities, procedures of IRB / IEC, Overview of regulatory environment in USA, Europe and India.	3	3	3.b
4.	Role and responsibilities of clinical trial personnel as per ICH GCP	Sponsor, Investigators, Clinical research associate, Auditors, Contract research coordinators, Regulatory authority	3	4	3.b, 3.c
5.	Designing of clinical study documents (protocol, CRF, ICF, PIC with assignment)	Informed consent Process, Data management and its components, Safety monitoring in clinical trials.	3	5

Course Code	PR Y 502		PHARMACOEPIDEMIOLOGY & PHARMACOECONOMICS	SDG Goals	L	Т	Р	С
Year	P.B. II	Semester	ANNUAL	3 GOOD HEALTH AND WELL-BEING	3	1	-	4
Course Objectives	1 65	poor compliance, quantify	appropriateness of drug utilization, the frequency and severity of side effects, and aid	l in the des	sign ar	nd evalu	uation	of

	Course Outcomes
C01	Differentiate the various methods used in Pharmacoepidemiology.
CO2	Evaluate and identify the various risks in Epidemiological studies.
CO3	Assessment of data used in Pharmacoepidemiology and Pharmacoeconomic.
CO4	Demonstrate ability in the design, conduct and evaluation of Pharmacoeconomic studies.
CO5	Applications of Pharmacoepidemiology and Pharmacoeconomics in clinical settings.
CO6	Interpretation the result in Pharmacoepidemiology and Pharmacoeconomic.

			Contact Hrs.	Mapped CO	SDG Target
1. Definition	and scope	Origin and evaluation of Pharmacoepidemiology need for Pharmacoepidemiology, aims and applications. Measurement of outcomes in Pharmacoepidemiology: Outcome measure and drug use measures Prevalence, incidence and incidence rate. Monetary units, number of prescriptions, units of drugs dispensed, defined daily doses and prescribed daily doses, medication adherence measurement.	28	1,2	3.3, 3.4
2. Concept o pharmaco	of risk in oepidemiology	Measurement of risk, attributable risk and relative risk, time-risk relationship and odds ratio.	15	2,3	3.8, 3.c, 3.d
3. Pharmaco methods	oepidemiological	Includes theoretical aspects of various methods and practical study of various methods with the help of case studies for individual methods. Drug utilization review, case reports, case series, surveys of drug use, cross – sectional studies, cohort studies, case control studies, case –cohort studies, meta-analysis studies, spontaneous reporting, prescription event monitoring and record linkage system.	28	2,3	3.8, 3.c, 3.d
4. Sources of pharmaco studies	f data for pepidemiological	Ad Hoc data sources and automated data systems. Selected special applications of pharmacoepidemiology: Studies of vaccine safety, hospital pharmacoepidemiology, pharmacoepidemiology and risk management, and drug induced birth defects	27	3,4	3.1, 3.2, 3.4, 3.8, 3.b
5. Definition pharmaco evaluatior		Role in formulary management decisions Pharmacoeconomic evaluation: Outcome assessment and types of evaluation Includes theoretical aspects of various methods and practical study of various methods with the help of case studies for individual methods: Cost – minimization, cost- benefit, and cost – effectiveness, cost utility.	27	2,3	3.8, 3.c, 3.d
Applicatio 6. Pharmaco	ons of beconomics	Applications of Pharmacoeconomics: Software and case studies.	20	2,5	3.8, 3.c, 3.d

С	ourse Code	PR 7 503	Course	CLINICAL PHARMACOKINETICS & THERAPEUTIC DRUG MONITORING	SDG Goals	L	Т	Р	С
Y	ear	P.B. II	Semester	ANNUAL	3 GOOD HEALTH AND WELL-BEING	2	1	-	3
С	ourse Objectives	 Understand concept of ne Know the advantages of 	individualization of dosage	d their application. pediatric patients for effective therapy. e regimen and therapeutic drug monitoring. etics and pharmacogenomics.					

	Course Outcomes
CO1	Students can understand the basic principles of clinical pharmacokinetics
CO2	Students shall able to design dosage regimen for individual patients
CO3	Students shall able to analyze and resolve pharmacokinetics drug interactions
CO4	Students shall able to adjust the dose in different disease conditions
CO5	Students can understand therapeutic drug monitoring forsafe and effective therapy
CO6	Understand the concept of population pharmacokinetics and Pharmacogenetics

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO	SDG Target
1.	Clinical Pharmacokinetics- Introduction	 a. Introduction to Clinical pharmacokinetics. b. Design of dosage regimens: Nomograms and Tabulations in designing dosage regimen, Conversion from intravenous to oral dosing, Determination of dose and dosing intervals, Drug dosing in the elderly and pediatrics and obese patients. 	12	1,& 2	
2.	Pharmacokinetics of Drug Interaction	 a. Pharmacokinetic drug interactions b. Inhibition and Induction of Drug metabolism c. Inhibition of Biliary Excretion. 	2	4	
3.	Therapeutic Drug monitoring	 a. Introduction b. Individualization of drug dosage regimen (Variability – Genetic, Age and Weight, disease, Interacting drugs). c. Indications for TDM. Protocol for TDM. d. Pharmacokinetic/Pharmacodynamic Correlation in drug therapy. e. TDM of drugs used in the following disease conditions: cardiovascular disease, Seizure disorders, Psychiatric conditions, and Organ transplantations. 	18	1, 3& 4	
4.	Dosage adjustment in Renal and hepatic Disease	 a. Renal impairment b. Pharmacokinetic considerations c. General approach for dosage adjustment in Renal disease. d. Measurement of Glomerular Filtration rate and creatinine clearance. e. Dosage adjustment for uremic patients. f. Extracorporeal removal of drugs. g. Effect of Hepatic disease on pharmacokinetics. 	10	1,3& 4	
5.	Population Pharmacokinetics	 a. Introduction to Bayesian Theory. b. Adaptive method or Dosing with feed back. c. Analysis of Population pharmacokinetic Data. 	12	1,3& 5	3.8, 3.c, 3.d
6.	Pharmacogenetics	 a. Genetic polymorphism in Drug metabolism: Cytochrome P-450 Isoenzymes. b. Genetic Polymorphism in Drug Transport and Drug Targets. c. Pharmacogenetics and Pharmacokinetics/Pharmacodynamic considerations 	8	1,3& 5

Course Code	PRY504	Title of the Course	PHARMACOTHERAPEUTICS-III	SDG Goals	L	Т	Р	С		
Year	P.B. II	Semester	ANNUAL							
Course Objectives At completion of this subject, it is expected that students will be able to understand – a. The pathophysiology of selected disease states and the rationale for drug therapy; b. The therapeutic approach to management of these diseases; c. The controversies in drug therapy; d. The importance of preparation of individualized therapeutic plans based on diagnosis; e. The needs to identify the patient-specific parameters relevant in initiating drug therapy, and monitoring therapy (including alternative time-course of clinical and laboratory indices of therapeutic response and adverse effects); f. The pathophysiology of selected disease states and explain the rationale for drug therapy; g. To summarize the therapeutic approach to management of these diseases including reference to the latest available evidence; h. To discuss the controversies in drug therapy; i. To discuss the preparation of individualized therapeutic plans based on diagnosis; and j. Identify the patient-specific parameters relevant in initiating drug therapy, and monitoring therapy (including alternatives, time-course										

Course Outcomes

- CO1 Formulate and implement evidence-based, patient-specific treatment plans for gastrointestinal disorders by developing and justifying comprehensive treatment plans, achieving maximum accuracy based on detailed patient histories, diagnostic results, and current clinical guidelines **CO2** Develop and apply evidence-based drug therapy for liver disorders by analyzing detailed patient histories and diagnostic results, ensuring
- adherence to current clinical guidelines with a minimum correctness.
- **CO3** Design individualized therapeutic plans for patients with hematological disorders by integrating recent advances in hematology research and clinical practice, ensuring maximum adherence to current evidence-based guidelines.
- **CO4** Investigate clinical case studies of neurological diseases to determine appropriate pharmacological and non-pharmacological interventions achieving high accuracy based on detailed patient histories, diagnostic results, and current clinical guidelines.
- **CO5** Develop evidence-based pharmacotherapy plans for psychiatric disorders, integrating medication, psychotherapy modalities, and patient-specific considerations to achieve highest adherence to current clinical guidelines and evidence-based practices.
- CO6 Design and implement evidence-based pharmacotherapy plans for pain disorders, ensuring individualized treatment approaches integrating medication, non-pharmacological therapies, corroborating current clinical guidelines and evidence-based practices.

Evaluate the importance of evidence-based medicine in pharmacotherapy, demonstrating proficiency in applying current clinical guidelines and research findings to achieve maximum accuracy in therapeutic decision-making and patient care.

Course Code	PRY505	Title of the Course	PHARMACOTHERAPEUTICS-III	L	Т	Р	С				
Year	P.B. II	Semester ANNUAL 3									
Course Objectives	Objectives To describe the pathophysiology of selected disease states and explain the rationale for drug therapy; To summarize the therapeutic approach to management of these diseases including reference to the latest available evidence; To discuss the controversies in drug therapy;										
	To discuss the preparation of individualised therapeutic plans based on diagnosis; and To identify the patient-specific parameters relevant in initiating drug therapy, and monitoring therapy (including alternatives, time- course of clinical and laboratory indices of therapeutic response and adverse effects).										

	Course Outcomes
CO1	Students understand the pathophysiology & diagnosis of GIT & liver disorder and their management/controversies including patient-specific parameters relevant in initiating drug therapy, and monitoring therapy (including alternatives, time-course of clinical and laboratory indices of
	therapeutic response and adverse effects).
CO2	Students have ability to explore the pathophysiology & diagnosis of hematological disorder and their management/controversies.
CO3	Students have ability to effectively communicate the pharmacotherapy of CNS disorder and their management/controversies.
CO4	Students analyzed the pathophysiology & diagnosis of Psychiatric disorder and their management/controversies including patient-specific parameters relevant in initiating drug therapy and monitoring therapy.
CO5	Students analyzed the pathophysiology & diagnosis of Schizophrenia, affective disorders, anxiety disorders, sleep disorders, obsessive compulsive disorders and their management/controversies including patient-specific parameters relevant in initiating drug therapy and monitoring therapy.
CO6	Students analyze the Pharmacotherapeutics of Pain management including pain pathways, neuralgias, headaches and evidence based
	medicine.
