

Integral University, Lucknow

Effective from Session: 2025-26							
Course Code	DME-501	Title of the Course	KINEMATICS OF MACHINES	L	T	P	C
Year	III	Semester	V	3	1	0	-
Pre-Requisite	10 th	Co-requisite	---				
Course Objectives	Ability to self-learn modern engineering tools, techniques, skills and contemporary engineering practice, necessary for engineering work.						

Course Outcomes	
CO1	Identify mechanism in real life application
CO2	Perform kinematic analysis of simple mechanisms
CO3	Perform statics and dynamics force analysis of slider crank mechanisms
CO4	Determine moment of inertia of rigid bodies experimentally
CO5	Analyze velocity and acceleration of mechanisms by vector and graphical method

Unit No.	Title of the Unit		Contact Hrs.	Mapped CO
1	Mechanisms and machines	Definition, Kinematic pairs, types of mechanism, Special types of mechanism, Space mechanisms.	5	1
2	Kinematic analysis	Displacement, Velocity and Acceleration of plane mechanisms, Graphical and analytical techniques.	7	2
3	Synthesis of mechanisms	Crank Rockers, Four Bar Mechanisms, Slider Crank Mechanisms.	6	3
4	Cams and cam follower mechanisms	Purpose of using cam- Follower mechanisms, types of cams and cam follower mechanisms, Nomenclature synthesis of disc cam profiles for prescribed follower motion, determination of basic dimension, Graphical and analytical approaches for different types of followers, Dynamics of cam – follower systems - Jump and crossover stock.	7	4
5	Gears and gear drives	Power transmission by gears and fundamental law of gearing, Involute profile and conjugate action, Characteristics of involute tooth gear - Pinion to system, Under cutting and interference, Minimum number teeth, types of gears, Various gear drives - Spur, Helical, worm and Bevel gear, Gear train Simple compound and epicyclic gear trains, Differential gears	9	5

Effective from Session: 2025-26							
Course Code	DME-503	Title of the Course	DESIGN AND ESTIMATION	L	T	P	C
Year	III	Semester	V	3	1	0	
Pre-Requisite	10 th	Co-requisite	--				
Course Objectives	1. To understand about basic concepts of Designing. 2. Be able to learn modern engineering tools, techniques, skills and contemporary engineering practice, necessary for machine design.						

Course Outcomes	
CO1	Ability to apply knowledge of engineering graphics, machine drawing, basic science & basic applied mathematics, basic machining processes, material science, for design procedures of mechanical component use in industries & incorporated in machine design.
CO2	Understand different welded and riveted joint structure and able to apply its knowledge to analyze its strength.
CO3	Be able to apply knowledge subjected to twisting moment ,machine parts subjected to combined bending and twisting moment and able to apply its knowledge to analyze its strength.
CO4	Be able to apply knowledge of the stresses & strain of mechanical component & incorporated in gear design.
CO5	Ability to apply knowledge of engineering machine drawing basic machining processes, material science, for estimation of material requirement & estimation of time for different machining operations.

Unit No.	Title of the Unit		Contact Hrs.	Mapped CO
1	Introduction to design & machine parts subjected to direct loads and shear loads	General design consideration in machine parts. Mechanical properties of materials of construction, steps in machine design. Factor of safety, Selection of materials. Threaded connections, core and nominal diameter of screw, boiler-Stay. Design for number of studs or bolts and their diameter for cylinder covers due to external forces. Punching and shearing. Design of cotter and Knuckle joints.	6	1
2	Riveted and welded joints machine parts subjected to bending moment	Types of riveted joints, possible failure of riveted joints. Strength and efficiency of riveted joint. Unwin's formula. Determination of safe load and pitch of rivets. Design of lap and butt joints. Common type of welded joints, definition of leg length, throat thickness and size of weld. Simple design for 'V' butt welded joint, Transverse fillet and parallel fillet welded joints. Design for the diameter of railway-Wagon axle, axle used in road-vehicles. Semi-elliptic Laminated Spring-Proof load and proof stress stiffness. Expression for max. stress and deflection. Determination of different dimensions number of Laminations, Central deflection in a Laminated spring.	7	2
3	Machine parts subjected to twisting moment, machine parts subjected to combined bending and twisting moment	Springs. Maximum shear stress induced for given axial load. Expression for axial deflection, spring index, solid length and stiffness. Calculation for number of coils, mean coil dia and dia of spring wire for axial gradual loads. Simple cases of composite springs. Design of keys and coupling bolts for a rigid flanged coupling Theory of failures: (i) Maxm. Principal stress theory. (ii) Maxm. shear stress theory concept of equivalent bending moment, equivalent torque, Design of over hung crank pin. Design of shaft dia for over hung pulley in a belt drive.	7	3
4	Machine parts subjected to combined direct and bending stress and design of gear	Eccentric load and eccentricity. Max. and minimum stress intensities. Reversal of stress. Design for safe load on small columns. Design of brackets and clamps for eccentric loading. Selection of material, Design analyzing, Lewis equation, Stress concentration, Dynamic load, Surface compressive stress, Beam strength, Bending stress, check or plastic deformation, Design procedure for Spur gear and Helical gear.	6	4
5	Estimation of material requirement & estimation of time for different machining operations	Estimation of the weight of simple machine parts. Review of the area/volume of triangle, equilateral triangle, Hexagon, rectangle, square rhomboid, parallelogram, Octagon, circle, Hollow circle, Sector of circle, Sector of Hollow circle circular, Semi circle, Cube prism, Square prism, general prism, Cylinders, Sphere, Hollow sphere segment of sphere, Zone of a sphere, Cones pyramids, Frustum of a pyramid, Frustum of a cone. Turning, Facing, Chamfering, Knurling, Taper Turning, Threading, Drilling, Boring, Shaping and planning, Milling, Broaching, Simple problems pertaining to above.	8	5

Effective from Session: 2012-13							
Course Code	DAE-505	Title of the Course	REFRIGERATION AND AIR CONDITIONING	L	T	P	C
Year	III	Semester	V	3	1	0	-
Pre-Requisite	10 th	Co-requisite	-				
Course Objectives	Apply basic principles of Mathematics and Science to solve engineering problems. Identify and rectify simple and common troubles in automotive vehicles. Supervise operation of boilers, steam turbines, air compressors, IC engines, refrigeration and air-conditioning equipment. Use hydraulic and pneumatic equipment. Use various instruments to measure heat/air related parameters.						

Course Outcomes	
CO1	Students will be able to demonstrate fundamental principles of refrigeration and air conditioning.
CO2	Students will be able to identify and locate various important components of the refrigeration and air conditioning system.
CO3	Students will be able to illustrate various refrigeration and air conditioning processes using psychometric chart.
CO4	Students will be able to design Air Conditioning system using cooling load calculations.
CO5	Students will be able to estimate air conditioning system parameters.

Unit No.	Title of the Unit		Contact Hrs.	Mapped CO
1	Refrigeration:	Introduction to refrigeration system, Methods of refrigeration, Carnot refrigeration cycle, unit of refrigeration effect and C. O.P. AIR REFRIGERATION CYCLE: Open and closed air refrigeration cycles, Reversed Carnot cycle, Bell Coleman or Reversed Joule air refrigeration cycle, Aircraft refrigeration system. Classification of aircraft refrigeration system. Simple air refrigeration system. Boot strap refrigeration, Regenerative, reduced ambient, Dry air rated Temperature (DART)	10	1
2	Vapour compression system	Single stage system, analysis of vapour compression cycle, use of T-S and P-H chart, effect of change in suction and discharge pressure on C. O. P., Effect of sub cooling of condensate and superheating of refrigerant vapour on C.O.P. of the cycle, Actual vapour compression refrigeration cycle, Multivapour compression system requirement, removal of flash gas, intercooling, Different configuration of multistage, Cascade system. 8	8	2
3	Vapour absorption system	Working principal of vapour absorption refrigeration, Compression between absorption and Compression system, Elementary idea of refrigeration absorption mixtures, Temperature- concentration diagram and Enthalpy concentration diagram, Adiabatic mixing of two streams, Ammonia-water vapour absorption system, Lithium Bromide water vapour absorption system Comparison. REFRIGERATION: Classification, Nomenclature, Desirable properties of refrigerants, Common refrigerants, Secondary refrigerant and CFC free refrigerants.	10	2
4	Air conditioning	Introduction to air conditioning, Psychometric properties and their definitions, Psychometric chart, Different Psychometric processes, thermal analysis of human body Effective temperature and comfort, cooling and heating load calculation, Selection of inside and outside design conditions, Heat transfer through walls & roofs, Infiltration and ventilation, Internal heat gain, sensible heat factor (SHF), By- pass factor, Grand Sensible heat factor (GSHF), Apparatus dew point (ADP).	9	3
5	Refrigeration equipment and application	Elementary knowledge of refrigeration and air conditioning equipments e.g. Compressor, Condensers, Evaporators and Expansion devices, Air washers, Cooling towers and humidifying efficiency, Food preservation, cold storage, Refrigerates Freezers, Ice plant, Water cooling, Elementary knowledge of transmission and industrial air conditioning.	7	4

Integral University, Lucknow

Effective from Session: 2025-26							
Course Code	DME-506	Title of the Course	AUTOMOBILE ENGINE	L	T	P	C
Year	2010-11	Semester	V	3	1	0	-
Pre-Requisite	10 th	Co-requisite					
Course Objectives	The Automobile Engine (DAE-603) course provides a comprehensive understanding of automotive engines and their systems. It begins with the classification and layout of automobiles, covering front, rear, and four-wheel drive vehicles, along with power unit selection based on torque and power requirements. The construction and components of I.C. engines, including multi-cylinder engines, valve mechanisms, and combustion chambers, are explored. It delves into fuel supply and ignition systems for petrol and diesel engines, carburetors, fuel injection, and alternative fuels like CNG. The course also covers engine cooling and lubrication systems, emphasizing their necessity, types, and components, ensuring thorough technical knowledge.						

Course Outcomes	
CO1	Illustrate the types and working of clutch and transmission system.
CO2	Demonstrate the working of different types of steering gears and braking systems.
CO3	Illustrate the constructional features of wheels, tyres and suspension systems.
CO4	Demonstrate the understanding of types of storage, charging and starting systems.
CO5	Identify the type of body and chassis of an automobile.

UnitNo.	Title of the Unit		Contact Hrs.	Mapped CO
1	CHOICE OF POWER UNIT FOR AN AUTOMOBILE: GENERAL CONCEPT OF AUTOMOBILES:	GENERAL CONCEPT OF AUTOMOBILES: Their classification name and make of some India made automobiles. Layout of chassis. Meaning of the terms : Front wheel drive, Rear wheel drive, Four wheel drive, Front and Rear wheeled vehicles. Basic requirements of an automobile. Study of specifications of different engines used in Indian vehicles. CHOICE OF POWER UNIT FOR AN AUTOMOBILE: Torque and power requirements of an automobile in various conditions. Torque characteristics of some power units such as Gas turbine, Electric motor and I.C. engine; their suitability to automobile needs. Drawback of I.C. engine to meet these needs. Measures taken to make it suitable to these needs.	8	1
2	I.C. ENGINE:	I.C. ENGINE: Multicylinder engine, Construction and material of its Piston and Connecting rod Assembly; Crank shaft, Fly wheel and Bearings; Engine valve and Valve operating mechanism (Cam shaft, Valve timing gears, Tappet, Push rod, Rocker and Valve springs). Advantage of multi-cylinder engine for automobiles use, Firing order, Arrangement of cylinders. Valve positions and design of combustion chamber cylinder head and gasket. Wankle rotary engine. Idea of super charging, its advantages phenomenon of knocking or detonation, its cause and effect on engine. Octane number and cetane number.	9	2
3	FUEL SUPPLY AND IGNITION SYSTEM:	PETROL ENGINE: Fuel supply circuit components (fuel tank to engine), their function. Exhaust pipe and silencer. Construction and working of mechanical and electrical fuel pumps, carburettor, its function. Simple carburettor, its limitations. Modified carburettor-Zenith, Carter, Solex and S.U. carburettors, their construction and working. Carburettor Controls-Throttle, Choke (Conventional, Automatic). Air fuel ratio, its variation with speed. Magneto and Coil Ignition Systems-Working of coil ignition system for multi-cylinder engine and electronic ignition system, Ignition timing, Ignition advance and retard-Their need and factors on which they depend. Spark Plugs-their types as used in automobile engines. Location of spark plug. DIESEL ENGINE: Fuel supply circuit for Diesel engine, Primary and secondary fuel filter, their positioning in the circuit. Construction and working of fuel pump and fuel injection pump. Governor and injector, Solid and Air injection in Diesel engine. Distributor types of diesel Injection pump. Turbulence in filters wet and dry types. Inlet and exhaust manifolds arrangement. Exhaust pipe and silencer. Concept of fuel energy saving. MULTI POINT FUEL SUPPLY FOR PETROL ENGINE : Construction, Fuel Supply system and working Introduction to other fuels - CNG, Battery, etc.	9	3

Integral University, Lucknow

4	COOLING SYSTEM:	Necessity for cooling the engine Air cooling Shapes of cooling fins. Field of application for air cooling. Water Cooling- Thermo syphon system, Pump circulated water cooling system. Details of water cooling system-Water jackets, Hose, radiators and fans. Thermostat, Water pump and pressure type radiator cap, Anti-freeze and anti-corrosive additives. Engine cooling liquids other than water and their characteristics.	7	4
5	LUBRICATION SYSTEM OF AUTOMOBILE ENGINES:	Principle of lubrication on multi-cylinder petrol/diesel engine. Types of lubrication systems-Splash type, Pressure type and Combined. Types of lubrication pumps, pump drive, Relief valves, Oil pressure, Oil filters and their location in lubrication system, Crank case ventilation, Crank case dilution.	7	5

Course Code	DME-507	Title of the Course	COMPUTER AIDED DESIGN AND MANUFACTURING	L	T	P	C
Year	III	Semester	V	3	1	0	-
Pre-Requisite	10 th	Co-requisite	--				
Course Objectives	Creating 2D and 3D models Understanding CAD concepts Creating engineering drawings Understanding 3D modeling concepts Understanding CAM concepts						

Course Outcomes	
CO1	Students learn how to create 2D drawings and 3D models of products using CAD software.
CO2	Students learn the basics of CAD software, such as AutoCAD, Solid Works, and Fusion 360
CO3	Students learn how to create engineering drawings using part and assembly models
CO4	Students learn about wireframe, surface, and solid modeling.
CO5	Students learn how CAM systems can be used to monitor and regulate production.

Unit No.	Title of the Unit		Contact Hrs.	Mapped CO
1	Introduction	Introduction to CAD and CAM. Need, Scope & Importance of CAD in Industries, Design Steps & Reasons for Implementing CAD System, Salient Features, Benefits & Functional Areas of CAD. Introduction to CAM, Functions of CAM, Benefits of CAM, Integrated CAD/CAM Organization-Concept, Necessity of CAD/CAM Integration, Computer Integrated Production System-Features & Advantages.	7	1
2	Hardware & software	Hardware & Software In CAD SYSTEM, Input & output devices- types, configuration, applications & Installation. Graphic packages: Types, features, system requirements & applications; GUI-concept, meaning & features; Graphic standards such as GKS, PHIG, IGES. 2D & 3D geometric transformations, translation, scaling, rotation, Mirror, zooming. Geometric modeling; types, features & applications, Animation concepts, need applications	10	2
3	Modeling	3D modeling, Difference between 2D & 3D, Axes nomenclature. Surfaces- types & applications. Solid modeling- methods & applications, Feature based modeling-concept, meaning & applications. Parametric modeling- concept, meaning & applications. Constraints – concept, meaning, common. Constraints & their utilities. Dimensional relationships- concept, meaning & utility. Model tree- concept, applications & benefits.	8	3
4	CNC machines	CNC Machines, components and part programming. Numerical control: Introduction, features, Advantages & limitations, Layout of CNC system, functions of each component of NC system, manufacturing methodology of NC system, Development of CNC & DNC Systems. Computer numerical control (CNC): Introduction, types & classification, features, specifications, benefits & applications, Salient construction features of CNC machines differing from conventional machines. CNC tooling-types, working & applications. Working of Automatic Tool Changer (ATC) & Automatic Pallet Changer (APC), Work holding & loading devices.	7	4
5	Manufacturing	CNC axes, motion nomenclature & coordinate system, Various positions like machine zero, home position, work piece zero, program zero. Machine control systems- types & applications. Preparatory functions (G codes) & miscellaneous functions (M codes). APT programming, tool nose radius compensation, linear & circular interpolation methods-coding. Macros, subroutines, fixed cycles, canned cycles. Programming practice problems on plain, step & taper turning. Recent trends in CAD/CAM. Adaptive control- Definition, meaning, block diagram & applications. Direct Numerical Control -Definition, meaning, block diagram, applications. Flexible Manufacturing System- Concept, evaluation, main elements, layout, importance & applications. Robotics- Definition of robot, classification, types of robot, elements of robot & applications. Computer Integrated Manufacturing- Concept, definitions, area covered benefits.	8	5

Course Code	DIM-501	Title of the Course	INDUSTRIAL MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT	L	T	P	C
Year	III	Semester	V	3	1	0	-
Pre-Requisite	10 th	Co-requisite	--				
Course Objectives	The course Industrial Management and Entrepreneurship Development prepares Diploma in Automobile Engineering students with essential management and entrepreneurial skills. It covers key management principles like planning, organizing, and control, while enhancing leadership, communication, and motivation techniques. Students learn human resource development, industrial relations, labor welfare, and financial management, including wage administration and costing. Material management concepts such as inventory control and procurement are addressed, alongside industrial laws like the Factory Act and taxation policies. The course also highlights entrepreneurship, project report preparation, and intellectual property rights, equipping students for leadership roles and entrepreneurial opportunities in the automobile industry.						

Course Outcomes	
CO1	The course will increase the skills in the students like communication skills, presentation, Human skills, Leadership skills, Managerial skills etc. after the completion of the course.
CO2	Increase students' capabilities and confidence to handle administrative, managerial and financial activities.
CO3	The course will assist in developing intellectual skills like creative thinking, Decision making, Leadership, Brain Storming, Motivation, etc.
CO4	The course will introduce skills in the students like team work, leadership skills, communication skills, body languages, positive attitude, etc.
CO5	This course is designed to develop understanding of various functions of management, role of workers and engineers and providing knowledge

Unit No.	Title of the Unit		Contact Hrs.	Mapped CO
1	Principles Of Management	Definition of management, Administration organisation, Functions management, Planning, Organizing, Co- ordination and control, Structure and function of industrial organisations, Leadership- Need for leadership, Factors to be considered for accomplishing effective leadership, Communication -Importance, Processes, Barriers to communication, Making communication, Effective, formal and informal communication, Motivation - Factors determining motivation, Positive and negative motivation, Methods for improving motivation, Incentives, Pay promotion and rewards, Controlling - Just in time, Total quality management, Quality circle, Zero defect concept. Concept of Stress Management.	8	1
2	Human Resource Development And Human And Industrial Relations	Introduction, Staff development and career development, Training strategies and methods. Human relations and performance in organisation, Understand self and others for effective behaviour, Industrial relation and disputes, Characteristics of group behaviour and Trade unionism, Mob psychology, Labour welfare, Workers participation in management.	8	2
3	Personnel And Financial Management	Responsibilities of human resource management - Policies and functions, Selection - Mode of selection - Procedure- training of workers, Job evaluation and Merit rating Objectives and importance wage and salary administration - Classification of wage, Payment schemes, Components of wage, Wage fixation. Fixed and working capital - resource of capital, Shares, types preference and equity shares, Debenture types, Public deposits, Factory costing, Direct cost, Indirect cost, Factory overhead, Fixation of selling price of product, Depreciation- Causes, Methods.	8	3
4	Material Management, Labour, Industrial And Tax Laws	Objective of a good stock control system - ABC analysis of inventory, Procurement and consumption cycle, Reorder level, Lead time, Economic order quantity, Purchasing procedure, Stock keeping, Bin card. Importance and necessity of industrial legislation, Types of labour laws and dispute, Factory Act 1948, Payment of Wages Act 1947, Employee State Insurance Act 1948, Various types of taxes - Production Tax, Local Tax, Trade tax, Excise duty, Income Tax.	8	4
5	Entrepreneurship Development And Intellectual Property Rights:	Concept of entrepreneurship, need of entrepreneurship in context of prevailing employment conditions of the country. Successful entrepreneurship and training for entrepreneurship development. Idea of project report preparation. Introduction to IPR (Patents, Copy Right, Trade Mark), Protection of undisclosed information, Concept and history of patents, Indian and International Patents Acts and Rules, Patentable and No patentable invention including product versus Process.	8	5

Course Code	DWS-551	Title of the Course	Mechanical Workshop	L	T	P	C
Year	III	Semester	V	0	0	3	-
Pre-Requisite	10 th	Co-requisite	---				
Course Objectives	To understand and compare the shaping/machining/treatment of various materials by different processes. To impart the knowledge of machines and tools used in different mechanical Processes.						

Course Outcomes	
CO1	To acquire skills in basic engineering practice.
CO2	To identify the hand tools and instruments.
CO3	To acquire measuring skills.
CO4	To acquire practical skills in the trades
CO5	To provides knowledge of job materials in various shops.

Exp No.	Title of the Experiment	Content of the Experiment(Any Ten)	Contact Hrs.	MappedCO
1.	Making utility jobs on lathe involving	Step turning, Parallel Turning, Taper turning and Knurling	3	1
2.		Drilling, Boring, Counter boring and Internal taper turning under cutting, Chamfering & Facing.	3	5
3.		V. thread cutting (Internal and External)	3	1
4.		Square thread Cutting (internal and external)	3	1
5.	Making utility jobs on	Planer - Planing of C.I Block & finish it on surface grinder to given specification	3	2
6.		Shaper - 'V' Block of different size	3	2
7.	Group work on milling machine involving down and climb Milling	Slab Milling	3	1
8.		Groove Cutting (Dovetail, Square, T-slot and Radius)	3	5
9.	Fitting shop	To make different types of keys.	3	2
10.		Making male and female fitting jobs.	3	2

Course Objectives	Creating 2D and 3D models Understanding CAD concepts Creating engineering drawings Understanding 3D modeling concepts Understanding CAM concepts						

Course Outcomes

CO1	Students learn how to create 2D drawings and 3D models of products using CAD software.
CO2	Students learn the basics of CAD software, such as AutoCAD, SolidWorks, and Fusion 360
CO3	Students learn how to create engineering drawings using part and assembly models
CO4	Students learn about wireframe, surface, and solid modeling.
CO5	Students learn how CAM systems can be used to monitor and regulate production.

No.	Title of the Unit		Contact Hrs.	Mapped CO
1	EXPERIMENT-01	Development of simple graphic package using 2-D and 3-D transformation and algorithms for generation of lines and circles (programming using C)	2	3
2	EXPERIMENT-02	Development of wire frame models of simple 3-D objects like box , cylinder, cone, pyramids, prisms and sphere (programming using C).	2	5
3	EXPERIMENT-03	FEM Mesh generation	2	4
4	EXPERIMENT-04	Stress analysis / heat conduction analysis using standard FEM package.	2	3
5	EXPERIMENT-05	Stress analysis of cantilever using U.D.L.	2	2
6	EXPERIMENT-06	Stress analysis of simply supported beam using point load.	2	3
7	EXPERIMENT-07	Benching of circular plate and analysis of stress and strain	2	1
8	EXPERIMENT-08	Heat conduction analysis using circular bar	2	4
9	EXPERIMENT-09	Design and analysis of crank shaft.	2	1

Effective from Session: 2012-13							
Course Code	DAE-555	Title of the Course	REFRIGERATION AND AIR CONDITIONING LAB	L	T	P	C
Year	III	Semester	V	0	0	2	
Pre-Requisite	10 th	Co-requisite	-				
Course Objectives	Understand the basic processes of air conditioning, including psychometric charts and cooling load calculations						

Course Outcomes	
CO1	The fundamental principles and applications of refrigeration and air conditioning system.
CO2	Obtain cooling capacity and coefficient of performance by conducting test on vapor compression refrigeration systems.
CO3	Present the properties, applications and environmental issues of different refrigerants
CO4	Operate and analyze the refrigeration and air conditioning systems

No.	Experiment no	Experiment	Contact Hrs.	MappedCO
1	Experiment no-1	Experiment on the refrigeration test-rig and calculation of various performance parameters.	2	1
2	Experiment no-2	To study different types of expansion devices used in a refrigeration system	2	2
3	Experiment no-3	To study different types of evaporators used in a refrigeration system	2	3
4	Experiment no-4	To study basic components of an air conditioning system.	2	4
5	Experiment no-5	Experiment on air conditioning test-rig and calculation of various performance parameters	2	5
6	Experiment no-6	To study air washers.	2	1
7	Experiment no-7	Study and determination of volumetric efficiency of a compressor	2	2
8	Experiment no-8	Visit of a central air conditioning plant	2	3
9	Experiment no-9	Visit of a cold storage plant	2	4
10	Experiment no-10	Study of a window air conditioner	2	5
